Contract Research and Development Organizations-Their History, Selection, and Utilization Shayne C. Gad,Charles B. Spainhour,David G. Serota,2020-07-17 This volume provides a complete update of all the materials in prior volumes on the subject (including current directories to testing labs and other support establishments worldwide), while adding substantial new material on the following topics: · The history of CROs, including snapshots of CROs and a genealogy chart making clear where they came from and where they went. · Study directors and principal investigators. · The nuts and bolts of study performance. · Electronic reporting requirements – SEND and eCTD (required for NDA, BLA, ANDA, and IND submissions). · Consultants and their roles. · An expanded examination of common problems and their solutions. This book boasts complete directories to the global universe of operating labs – where they are, how to contact them, and what they do (including special capabilities). Additionally, checklists for qualifying labs and manufacturing facilities – and for auditing studies and projects at such facilities – are included. It is directed at those in industry (specifically directed at those working for companies using CRO services) but will also be of interest to scientists or administrators working in research organizations themselves. In this case, the contents of this new work are essential to the target reader because the work, regulations, and actors (CROs) have evolved and changed at a rapid pace in the 10 years since the earlier volume that the author published. Likewise, the companies using these services have come to all be almost completely dependent on outsourcing. The earlier texts remain the only source of their kind (paper or electronic) on the field and the only noncommercial guide to the global industry and this volume provides a complete update.

Education Is Not Rocket Science David B. Zandvliet,2006 The dominance of computer labs in our schools is the result of a long struggle among teachers and technicians for control of precious computer resources. As technicians gain power and influence, this is expressed in the 'row on row of machines' installed in literally thousands of computer labs in schools around the world. While labs are in some ways, ideal for learning about technology or computer programming, they somehow seem ill equipped to assist teachers with a lesson on language arts, geography or for helping students conduct a scientific experiment. As a result, the huge investment in computers seems like so much wasted potential: labs are not influencing teaching in the ways we had hoped for, and in fact, their use may even be harmful to students. These observations are based on five years of experience as the director of a centre for educational technology at a leading Canadian university and, on the results of three international studies I conducted in Australia, Canada and Malaysia. A reversal of the current 'techno- trend' would mean teachers would reclaim computers for 'their own' classrooms, and relegate the idea of the computer lab to the scrap heap of history. As educators, we need to discard the 'once size fits all'strategy which computer labs imply about teachers' instructional needs. This is reinforced by the apparent failure of computers to transform teachers' practice despite significant investments in computer technologies. Some critics describe this as a 'management problem' as computer labs reinforce 'top down' ways of thinking about knowledge. Unfortunately, once such models are adopted, undesirable uses of technology--such as the computer lab--become entrenched in a bureaucratic mindset, limiting the effectiveness of these expensive tools to support teaching and learning.

David Sarnoff Research Center Alexander B. Magoun,2003 Color television, transistors, lasers, digital memory, computers, liquid-crystal displays, medical electronics, and digital video-these

technologies define modern civilization. David Sarnoff Research Center: RCA Labs to Sarnoff Corporation tells the story of their invention or innovation at this Princeton, New Jersey research facility. The center's engineers, physicists, chemists, technicians, and shop workers developed radar, sonar, and TV-guided missiles during World War II. In 1951, RCA renamed the labs for its visionary leader, David Sarnoff, and the center continued its groundbreaking work for RCA's product divisions and patent-licensing department. General Electric bought RCA in 1986 and donated the David Sarnoff Research Center to SRI International, a nonprofit research institute. Ten years later, the center became Sarnoff Corporation, a company that provides innovative client solutions, licenses patents, starts companies, and sells products. David Sarnoff Research Center: RCA Labs to Sarnoff Corporation celebrates the fascinating process of research and development with stunning photographs selected from thirty thousand stills in RCA's collections now held at the David Sarnoff Library. Masterfully framed and lighted, these rare images reflect American confidence in the promise of technology at its twentieth-century peak and illustrate a sometimes unusual world within a social life of awards, gardens, picnics, and sports teams.

Developing Norms for the Provision of Biological Laboratories in Low-Resource Contexts National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Life Sciences,Policy and Global Affairs,2019-05-01 On June 27-28, 2018, the U.S. National Academies of Sciences, Engineering, and Medicine (the National Academies) convened an international workshop in Amsterdam, the Netherlands, on developing norms for the provision of laboratories in low-resource contexts. The U.S. Department of State's Biosecurity Engagement Program requested that the National Academies organize this workshop to engage an international group of organizations that provide funding for construction, upgrades, and maintenance of biological laboratories in countries without the means to build such labs themselves. Twenty-one people from 19 organizations participated. The intent was to advance the conversation about the identification and application of guiding principles and common norms for use by these organizations in their grants, partnerships, and aid. This publication summarizes the presentations and discussions from the workshop.

Short Geometry Labs Francis Gardella,Richard Delaware,2022-05-01 Much of the content that students study in a high school geometry course is totally new to them. The middle school mathematics curriculum does not contain preparatory work for many of these topics as it does in preparing students for the study of Algebra. The proposed text would be a landmark book giving students the ability to gain some understanding of the content before it is formally addressed in the lesson in the course. While many teachers use initial classroom activities called ‘DoNow’s,’ there are no structured materials available to teachers of Geometry for this purpose. When teachers do use them, these activities are constructed by the teachers. The text provides the teachers with such materials and is structured to address what the teachers are about to present to the students. The Labs can also be used for exploration of topics at the middle school level enhancing the program there and giving students a better preparation for their high school Geometry program.
