IBM Business Process Manager V8.5 Performance Tuning and Best Practices Mike Collins,Zi Hui Duan,Andreas Fried,Ben Hoflich,Chris Richardson,Torsten Wilms,IBM Redbooks,2015-02-24 This IBM® Redbooks® publication provides performance tuning tips and best practices for IBM Business Process Manager (IBM BPM) V8.5.5 (all editions) and IBM Business Monitor V8.5.5. These products represent an integrated development and runtime environment based on a key set of service-oriented architecture (SOA) and business process management (BPM) technologies. Such technologies include Service Component Architecture (SCA), Service Data Object (SDO), Business Process Execution Language (BPEL) for web services, and Business Processing Modeling Notation (BPMN). Both IBM Business Process Manager and Business Monitor build on the core capabilities of the IBM WebSphere® Application Server infrastructure. As a result, Business Process Manager solutions benefit from tuning, configuration, and best practices information for WebSphere Application Server and the corresponding platform Java virtual machines (JVMs). This book targets a wide variety of groups, both within IBM (development, services, technical sales, and others) and customers. For customers who are either considering or are in the early stages of implementing a solution incorporating Business Process Manager and Business Monitor, this document proves a useful reference. The book is useful both in terms of best practices during application development and deployment and as a reference for setup, tuning, and configuration information. This book talks about many issues that can influence performance of each product and can serve as a guide for making rational first choices in terms of configuration and performance settings. Similarly, customers who already implemented a solution with these products can use the information presented here to gain insight into how their overall integrated solution performance can be improved.

Graphics programming with GDI+ and DirectX Alex Polyakov,Vitaly Brusentsev,2005 Providing a look ahead at some of the most promising innovations in graphics technologies, this guide covers the GDI+ graphical library, the .NET Framework platform, C#, and the DirectX library. Theoretical aspects of graphics, algorithms for solving common problems, and examples of their practical implementation are covered. The support of popular graphic file formats, such as BMP, GIF, TIFF, JPEG, EXI, PNG, ICO, WMF, and EMF, as well as bitmap redrawing with the application of the external alpha channel are discussed. Resizing, stretching, distorting, and rotating bitmaps are addressed in detail, as is

gradient filling.

Description of Input and Examples for Phreeqc Version 3 David L. Parkhurst,C. A..j.
Apello,2014-07-17 PHREEQC version 3 is a computer program written in the C and C++ programming
languages that is designed to perform a wide variety of aqueous geochemical calculations. PHREEQC
implements several types of aqueous models: two ion-association aqueous models (the Lawrence
Livermore National Laboratory model and WATEQ4F), a Pitzer specific-ion-interaction aqueous model,
and the SIT (Specific ion Interaction Theory) aqueous model. Using any of these aqueous models,
PHREEQC has capabilities for (1) speciation and saturation-index calculations; (2) batch-reaction and
one-dimensional (1D) transport calculations with reversible and irreversible reactions, which include
aqueous, mineral, gas, solid-solution, surface-complexation, and ion-exchange equilibria, and specified
mole transfers of reactants, kinetically controlled reactions, mixing of solutions, and pressure and
temperature changes; and (3) inverse modeling, which finds sets of mineral and gas mole transfers
that account for differences in composition between waters within specified compositional uncertainty
limits.

MATLAB Graphical Programming Cesar Lopez,2014-12-26 MATLAB enables you to work with its graphics capabilities in almost all areas of the experimental sciences and engineering. The commands that MATLAB implements in job related graphics are quite useful and are very efficient. MATLAB has functions for working with two-dimensional and three-dimensional graphics, statistical graphs, curves and surfaces in explicit, implicit, parametric and polar coordinates. It also works perfectly with twisted curves, surfaces, volumes and graphical interpolation. MATLAB Graphical Programming addresses all these issues by developing the following topics:This book is a reference designed to give you a simple syntax example of the commands and to graph it so that you can see the result for:

Biological Effects of Static Magnetic Fields Xin Zhang,2023-02-21 The book summarizes the emerging topic about the effects of SMF on biological samples ranging from single molecules, subcellular compartments, and cells to whole organisms. It also discusses the potential application of SMF in clinical treatment of cancer, pain, diabetes and other diseases. With the development and growing popularity of modern appliances like MRI in hospitals, the potential impact of magnetic fields on human health is invoking increasing concerns. At the same time, SMF has been explored in the treatment of tumor and other diseases for decades. Nevertheless, there are still some reservations and uncertainties about these treatments, which are largely due to the differential biological effects reported in the literature. These experimental inconsistencies are mainly caused by variations such as different magnetic field types, intensities, treatment time, as well as biological samples examined. The second edition added eight new chapters about new progress in this field including impacts of SMFs, magnetism of biomolecules, and potential of SMFs in the management of bone, pain, diabetes, and immune systems. This volume will help clarify some dilemmas in this field and encourage further investigations in order to achieve a better understanding of the biological effects of SMF, aiming for a rational application of SMF in clinical therapy in the near future. The book is useful for scientists, doctors, and students who are interested in magnetic fields and life sciences
