<u>Biomechanical Spectrum of Human Sport Performance</u> Redha Taiar,Mario Bernardo-Filho,2020-06-23 Writing or managing a scientific book, as it is known today, depends on a series of major activities, such as regrouping researchers, reviewing chapters, informing and exchanging with contributors, and at the very least, motivating them to achieve the objective of publication. The idea of this book arose from many years of work in biomechanics, health disease, and rehabilitation. Through exchanges with authors from several countries, we learned much from each other, and we decided with the publisher to transfer this knowledge to readers interested in the current understanding of the impact of biomechanics in the analysis of movement and its optimization. The main objective is to provide some interesting articles that show the scope of biomechanical analysis and technologies in human behavior tasks. Engineers, researchers, and students from biomedical engineering and health sciences, as well as industrial professionals, can benefit from this compendium of knowledge about biomechanics applied to the human body.

<u>Ordinary Shares, Exotic Methods</u> Francis E. H. Tay,2003 Exotic methods refer to specific functions within general soft computing methods such as genetic algorithms, neural networks and rough sets theory. They are applied to ordinary shares for a variety of financial purposes, such as portfolio selection and optimization, classification of market states, forecasting of market states and data mining. This is in contrast to the wide spectrum of work done on exotic financial instruments, wherein advanced mathematics is used to construct financial instruments for hedging risks and for investment.In this book, particular aspects of the general method are used to create interesting applications. For instance, genetic niching produces a family of portfolios for the trader to choose from. Support vector machines, a special form of neural networks, forecast the financial markets; such a forecast is on market states, of which there are three OCo uptrending, mean reverting and downtrending. A self-organizing map displays in a vivid manner the states of the market. Rough sets with a new discretization method extract information from stock prices.

<u>International Communities of Invention and Innovation</u> Arthur Tatnall,Christopher Leslie,2016-11-30 This book contains revised selected papers presented at the IFIP WG 9.7 International Conference on the History of Computing, HC 2016, held in Brooklyn, NY, USA, in May 2016. The 13 full papers included in this volume were carefully reviewed and selected from numerous submissions. The papers cover a wide range of topics related to the history of computing and focus on the history of pre-existing relationships and communities that led to triumphs (and dead-ends) in the history of computing. This broad perspective helps to tell a more accurate story of important developments like the Internet and provide a better understanding

of how to sponsor future invention and innovation. They reflect on histories that foreground the international community along four broad themes: invention, policy, infrastructure, and social history.

Deep Learning and its Applications using Python Niha Kamal Basha,Surbhi Bhatia Khan,Abhishek Kumar,Arwa Mashat,2023-09-27 This book thoroughly explains deep learning models and how to use Python programming to implement them in applications such as NLP, face detection, face recognition, face analysis, and virtual assistance (chatbot, machine translation, etc.). It provides hands-on guidance in using Python for implementing deep learning application models. It also identifies future research directions for deep learning.

Vultures' Picnic Greg Palast,2012-03-15 The bestselling author of The Best Democracy Money Can Buy offers a globetrotting, Sam Spade-style investigation that blows the lid off the oil industry, the banking industry, and the governmental agencies that aren't regulating either. This is the story of the corporate vultures that feed on the weak and ruin our planet in the process-a story that spans the globe and decades. For Vultures' Picnic, investigative journalist Greg Palast has spent his career uncovering the connection between the world of energy (read: oil) and finance. He's built a team that reads like a casting call for a Hollywood thriller-a Swiss multilingual investigator, a punk journalist, and a gonzo cameraman-to reveal how environmental disasters like the Gulf oil spill, the Exxon Valdez, and lesser-known tragedies such as Tatitlek and Torrey Canyon are caused by corporate corruption, failed legislation, and, most interestingly, veiled connections between the financial industry and energy titans. Palast shows how the International Monetary Fund, World Bank, World Trade Organization, and Central Banks act as puppets for Big Oil. With Palast at the center of an investigation that takes us from the Arctic to Africa to the Amazon, Vultures' Picnic shows how the big powers in the money and oil game slip the bonds of regulation over and over again, and simply destroy the rules that they themselves can't write-and take advantage of nations and everyday people in the process.

Practical Aspects of Knowledge Management Dimitris Karagiannis,Ulrich Reimer,2007-11-08 This book contains the papers presented at the 4th International Conference on Practical Aspects of Knowledge Management organized by the Department of Knowledge Management, Institute of Informatics and Business Informatics, University of Vienna. The event took place on 2002, December 2–3 in Vienna, Austria. The PAKM conference series is a forum for people to share their views, to exchange ideas, to develop new insights, and to envision completely new kinds of solutions to knowledge management problems, because to succeed in the accelerating pace of the "Internet age," organizations will be obliged to efficiently leverage their most valuable and underleveraged resource: the intellectual capital of their highly educated, skilled, and experienced employees. Thus next-generation business solutions

must be focussed on supporting the creation of value by adding knowledge-rich components as integral parts in the work process. The authors, who work at the leading edge of knowledge management, have pursued integrated approaches which consider both the technological side, and the business side, and the organizational and cultural issues. We hope the papers, covering a broad range of knowledge management topics, will be valuable, at the same extent, for researchers and practitioners developing knowledge management approaches and applications. It was a real joy seeing the visibility of the conference increase and noting that knowledge management researchers and practitioners from all over the world submitted papers. This year, 90 papers and case studies were submitted, from which 55 were accepted.

Enterprise Design, Operations, and Computing João Paulo A. Almeida,Dimka Karastoyanova,Giancarlo Guizzardi,Marco Montali,Fabrizio Maria Maggi,Claudenir M. Fonseca,2022-09-27 This book constitutes the proceedings of the 26th International Conference on Enterprise Design, Operations, and Computing, EDOC 2022, which took place in Bozen-Bolzano, Italy, in October 2022. The 15 full papers included in this book were carefully reviewed and selected from 48 submissions. They were organized in topical sections as follows: enterprise security; enterprise architecture; business process modeling and monitoring; business process mining and discovery; and process-driven applications.

Plant Biodiversity and Genetic Resources Andreas W. Ebert,Johannes M. M. Engels,2021-06-18 The papers included in this Special Issue address a variety of important aspects of plant biodiversity and genetic resources, including definitions, descriptions, and illustrations of different components and their value for food and nutrition security, breeding, and environmental services. Furthermore, comprehensive information is provided regarding conservation approaches and techniques for plant genetic resources, policy aspects, and results of biological, genetic, morphological, economic, social, and breeding-related research activities. The complexity and vulnerability of (plant) biodiversity and its inherent genetic resources, as an integral part of the contextual ecosystem and the human web of life, are clearly demonstrated in this Special Issue, and for several encountered problems and constraints, possible approaches or solutions are presented to overcome these.

Transactions on Pattern Languages of Programming IV James Noble,Ralph Johnson,Uwe Zdun,Eugene Wallingford,2019-03-04 The Transactions on Pattern Languages of Programming subline aims to publish papers on patterns and pattern languages as applied to software design, development, and use, throughout all phases of the software life cycle, from requirements and design to implementation, maintenance and evolution. The primary focus of this LNCS Transactions subline is on patterns, pattern collections, and pattern languages themselves. The journal also includes reviews, survey articles, criticisms of patterns and pattern languages, as well as other research on patterns and pattern languages. This book, the third volume in

the Transactions on Pattern Languages of Programming series, presents five papers that have been through a careful peer review process involving both pattern experts and domain experts. The papers present various pattern languages and a study of applying patterns and represent some of the best work that has been carried out in design patterns and pattern languages of programming over the last few years.

Enlightened Planning Christopher Chapman,2019-06-26 Strategy, risk management and project management are often considered separately by those applying their principles—but at their most effective, all are dependent upon each other for success. Enlightened Planning teaches this holistic perspective and demonstrates how a synthesis of these approaches yields far greater opportunities. A strategic, calculated risk, for example, can be less inherently risky than chronic risk aversion over time. Here, a respected specialist and teacher demonstrates how to become an 'enlightened planner', one that is aware of project, strategy and risk concerns, and their potential interplay. Following the core principle of Keep It Simple Systematically, he shows how organised, systematic thought processes can demystify the complexities of decision-making when considering a huge variety of concerns at once. Supported throughout with real-life cases from the author's considerable experiences with commercial organisations, it is also supported by a website containing even more cases, learning and teaching materials. This book is essential reading for any practitioner specialising in risk management, project management or strategy; as well as those teachers or participants in executive programmes.
