An Integrated Approach for Added-Value Products from Lignocellulosic Biorefineries Alírio Egídio Rodrigues, Paula Cristina de Oliveira Rodrigues Pinto, Maria Filomena Barreiro, Carina Andreia Esteves da Costa, Maria Inês Ferreira da Mota, Isabel Fernandes, 2018-10-01 This book offers the state of the art on the progress and

accomplishments of 25 years of research at the Associate Laboratory LSRE-LCM - Laboratory of Separation and Reaction Engineering - Laboratory of Catalysis and Materials on lignin conversion to value-added products and their downstream separation. The first valorisation pathway presented for lignin is its partial depolymerisation by oxidation for the production of low molecular weight phenolic compounds, such as vanillin and syringaldehyde, and the second one is the lignin application as macromonomer for polyurethane synthesis. In this book, the authors present the integration of these two valorisation pathways as an exclusive vision of LSRE-LCM resulting from hands-on experience on reaction and separation processes: the integrated process for lignin valorisation. In this perspective, the lignin is oxidized to simultaneously produce syringaldehyde and vanillin, and the obtained by-products to produce a polyol for lignin-based polyurethanes, completing the lignin value chain. On the perspective of pulp mill-related biorefineries, a valorisation route for eucalyptus bark is also presented, focusing on LSRE-LCM experience on extraction and separation of bioactive polyphenols, giving some insights about further integration of extracted bark on biorefining operations.

*Biohydrogen* Patrick C. Hallenbeck,2013-06-11 There are many biological paths to hydrogen production, each with potential advantages, but also with its own challenges to implementation. Nonsulfur photosynthetic bacteria are able to capture solar energy and use it to drive the nearly complete conversion of substrate to hydrogen and carbon dioxide in a process called photofermentation. These organisms, which have the potential capacity to use a variety of feedstocks, are well known for their light-driven conversion of organic acids to hydrogen and carbon dioxide. Thus, they are ideal candidates for two-stage or coculture systems that derive additional hydrogen

from the effluents of dark fermentations. In addition, various industrial and agricultural waste streams rich in organic acids can potentially serve as substrates for photofermentation. The metabolic and enzymatic properties underlying photofermentation, as well as possible waste streams that may be used successfully, are reviewed. Recent progress, including the use of immobilized systems and metabolic engineering, is highlighted.

This book continues a series called Logic at the Crossroads whose title reflects a view that the deep insights from the classical phase of mathematical logic can form a harmonious mixture with a new, more ambitious research agenda of understanding and enhancing human reasoning and intelligent interaction. The editors have gathered together articles from active authors in this new area that explore dynamic logical aspects of norms, reasons, preferences and beliefs in human agency, human interaction and groups. The book pays a special tribute to Professor Rohit Parikh, a pioneer in this movement.

**Omega-3 Fatty Acids, the Brain and Retina**

Artemis P. Simopoulos,Nicolás G. Bazán,2009-01-01  
Research on omega-3 fatty acids has come a long way since its beginnings in the middle 70's. Starting with studies on the role of omega-3 fatty acids in the secondary prevention of cardiovascular disease, interest soon turned to the mechanisms of and the need to balance the omega-6 to the omega-3 ratio for homeostasis and normal development. Today, it is widely accepted that docosahexaenoic acid (DHA) and arachidonic acid are essential for brain development during pregnancy, lactation and throughout the life cycle. It is also no longer controversial that DHA can affect brain function, mental health and behavior, and studies on supplemental DHA in age-related macular degeneration have revealed significant Interactions between DHA and genetic variants. Featuring contributions by leading scientists in the field, this publication

discusses not only the role of omega-3 fatty acids in maintaining homeostasis, but also their importance in the prevention and management of neurodegenerative diseases associated with the aging process or genetic predisposition. It is thus not only of interest to nutritionists, dieticians or policy makers, but also to psychologists, physiologists, neuroscientists, psychiatrists, ophthalmologists, geneticists, neurologists, pediatrists, obstetricians and geriatricians.
