Students with Both Gifts and Learning Disabilities Tina A.

Newman, Robert J. Sternberg, 2012-12-06 We were motivated to edit this book when we began to hear stories of exceptional students who were struggling with reading, writing, or math, but who could solve seemingly any problem with computers, or build the most intricate structures with Legos, or could draw beautiful pictures, or could tell the most creative stories but ended up in tears when asked to write it out. How is it possible to have so much talent in some areas and yet to appear to have a disability in another? What resources are available for these students? How can we ensure that these students' abilities are nurtured and developed? Our goal in this book is to provide ideas and possibly even tentative answers for educators and to stimulate more questions to be answered by researchers. We have ourselves been addressing related questions for some time. Our group at the PACE Center at Yale has explored the development of abilities, competencies and expertise that allow people to be successful in life. Through this work, we have collaborated with school districts and other educators and researchers across the country to expand the notion of what is

traditionally thought of as intelligence. We use the concept of successful intelligence to allow for the possibility that the skills traditionally taught in school are not the only ones, and often not even the most important ones, that allow people to be successful in the world.

Radiology 101 William E. Erkonen, Wilbur L. Smith, 2005 Featuring over 850 illustrations, Radiology 101 provides the basic groundwork necessary for interpreting images and understanding how current imaging modalities function. The first chapter explains the principles, capabilities, and limitations of each imaging modality. Subsequent chapters examine anatomic areas and organ systems, including a separate chapter on the pediatric chest and abdomen. Clearly labeled images show normal anatomy from various angles with various modalities and depict normal variants and common pathology. Each chapter includes suggested radiologic workups and key points summaries. This completely updated edition includes state-of-the-art images and new material on MR spectroscopy, nuclear imaging, the abdomen, mammography, and interventional radiology.

Abdominal Imaging Bernd Hamm, Pablo R. Ros, 2013-07-01 In this

book a team of leading experts come together to provide a comprehensive overview of modern imaging of the abdomen and pelvis, with detailed sections on both gastrointestinal and genitourinary imaging. Each chapter has an identical structure and focuses on a particular organ or organ system, allowing the reader to approach the field one topic at a time. Indications for a variety of imaging techniques and examination protocols are clearly described, and the imaging features of normal anatomy and pathologic entities are depicted in an abundance of high-quality images. Care is taken to consider all recent technical developments and new indications, and the diagnostic performance of different imaging modalities is carefully compared. It is anticipated that this book will come to be regarded as the standard work of reference on abdominal and pelvic radiology.

A Lot Like Love Jennifer Snow, 2021-06-29 They have different ideas about the fate of an old inn...until it brings them together. When Sarah Lewis inherits a run-down B&B from her late grandmother in coastal Blue Moon Bay, common sense tells her to sell it and return to her life in L.A. But when the new owners decide to tear down the old place, Sarah's plan changes in an instant. Now she's determined to return the charming-but-run-down property to its former glory...even if it means hiring her old high school crush to help. Wes Sharrun's life feels like it's unraveling. After losing his wife three years ago, he can't seem to balance his struggling construction company afloat and be a great dad to his nine-year-old daughter. Working on Sarah's B&B might be the perfect opportunity to get back on his feet. But keeping his distance is tough when even his daughter can't resist Sarah's warmth and charm... As Sarah and Wes work together to transform the old place—and discover some of its secrets—the spark between them only grows brighter. But is this a

labor of love...or a second chance at it? Each book in the Blue Moon Bay series is STANDALONE: * A Lot Like Love * A Lot Like Christmas * A Lot Like Forever

Forensis Lawrence Abu Hamdan, Nabil Ahmed, Maayan Amir, Hisham Ashkar, Emily Dische-Becker, Ryan Bishop, 2014 The role of material forensics in articulating new notions of the public truth of political struggle, violent conflict, and climate change are the focus of Forensis, the HKW exhibition catalog based on the theories of Eyal Weizman. - The concept of forensis was developed as a research project by Goldsmiths College, Centre for Research Architecture by theorist Eyal Weizman. The project is the subject of a major exhibition at the Haus der Kulturen der Welt (HKW) and catalog cum theoretical reader presenting the findings and contributions of over 20 influential architects, artists, filmmakers, and academics. Forensis, (Latin for pertaining to the forum) argues for the role of material forensics as central to the interpretation of the ways in which states police and govern their subjects. Forensics engages struggles for justice across frontiers of contemporary conflict through the study of how technology mediates the testimony of material objects such as bones, ruins, toxic substances, etc. In the hopes of unlocking forensics potential as a political practice, the project participants present innovative investigations aimed at producing new kinds of evidence for use by international prosecutorial teams, political organizations, NGOs, and the UN.
