The Official CompTIA Security+ Self-Paced Study Guide (Exam SY0-601)

CompTIA,2020-11-12 CompTIA Security+ Study Guide (Exam SY0-601)

Data Mining for Intelligence, Fraud & Criminal Detection Christopher Westphal,2008-12-22 In 2004, the Government Accountability Office provided a report detailing approximately 200 government-based data-mining projects. While there is comfort in knowing that there are many effective systems, that comfort isn't worth much unless we can determine that these systems are being effectively and responsibly employed. Written by one of the most respected consultants in the area of data mining and security, Data Mining for Intelligence, Fraud & Criminal Detection: Advanced Analytics & Information Sharing Technologies reviews the tangible results produced by these systems and evaluates their effectiveness. While CSI-type shows may depict information sharing and analysis that are accomplished with the push of a button, this sort of proficiency is more fiction than reality. Going beyond a discussion of the various technologies, the author outlines the issues of information sharing and the effective interpretation of results, which are critical to any integrated homeland security effort. Organized into three main sections, the book fully examines and outlines the future of this field with an insider's perspective and a visionary's insight. Section 1 provides a fundamental understanding of the types of data that can be used in current systems. It covers approaches to analyzing data and clearly delineates how to connect the dots among different data elements Section 2 provides real-world examples derived from actual operational systems to show how data is used, manipulated, and interpreted in domains involving human smuggling, money laundering, narcotics trafficking, and corporate fraud Section 3 provides an overview of the many

information-sharing systems, organizations, and task forces as well as data interchange formats. It also discusses optimal information-sharing and analytical architectures. Currently, there is very little published literature that truly defines real-world systems. Although politics and other factors all play into how much one agency is willing to support the sharing of its resources, many now embrace the wisdom of that path. This book will provide those individuals with an understanding of what approaches are currently available and how they can be most effectively employed.

Android Malware Xuxian Jiang, Yajin Zhou, 2013-06-13 Mobile devices, such as smart phones, have achieved computing and networking capabilities comparable to traditional personal computers. Their successful consumerization has also become a source of pain for adopting users and organizations. In particular, the widespread presence of information-stealing applications and other types of mobile malware raises substantial security and privacy concerns. Android Malware presents a systematic view on state-of-the-art mobile malware that targets the popular Android mobile platform. Covering key topics like the Android malware history, malware behavior and classification, as well as, possible defense techniques.

Managing eHealth M. Rosenmüller, D. Whitehouse, P. Wilson, 2014-08-05 This book constitutes an excellent source of information for gaining a better understanding of information technologies in healthcare; for reviewing how healthcare will change as a consequence; and how to manage these changes in order to realise eHealth's full potential in creating value for patients, professionals and the system as a whole.

Improving Ehealth J. E. W. C. van Gemert-Pijnen, Lisette van Gemert-Pijnen, Oscar Peters, Hans C. Ossebaard, 2013 eHealth is the use of information and communication technologies to support

health and healthcare. It is also a school of thought about connectivity, social participation, and networked innovation. Policy makers, health care professionals, patients, insurers, researchers, and citizens alike, believe that eHealth will contribute to the solution of today's health issues and to the innovation of health care systems. In this book, health specialists - from the Center for eHealth Research and Disease Management at the University of Twente, along with the Dutch government's National Institute for Public Health and the Environment (RIVM) - explain what needs to be done to increase the impact and uptake of eHealth interventions. They do so by examining a range of hot topics, such as human-centered design, business modeling, persuasive technology, and the current trends at the intersection of health, social science, and technology. These topics converge in a holistic approach to the development and design of successful eHealth technologies.

Net-Centric Approaches to Intelligence and National Security Roy Ladner, Frederick E. Petry, 2010-10-29 The development of net-centric approaches for intelligence and national security applications has become a major concern in many areas such as defense, intelligence and national and international law enforcement agencies. In this volume we consider the web architectures and recent developments that make net-centric approaches for intelligence and national security possible. These include developments in information integration and recent advances in web services including the concept of the semantic web. Discovery, analysis and management of web-available data pose a number of interesting challenges for research in web-based management systems. Intelligent agents and data mining are some of the techniques that can be employed. A number of specific systems that are net-centric based in various areas of military applications, intelligence and law enforcement are presented that utilize one or more of such techniques. The opening chapter overviews the concepts related to ontologies which now form much of the basis of the possibility of

sharing of information in the Semantic Web. In the next chapter an overview of Web Services and examples of the use of Web Services for net-centric operations as applied to meteorological and oceanographic (MetOc) data is presented and issues related to the Navy's use of MetOc Web Services are discussed. The third chapter focuses on metadata as conceived to support the concepts of a service-oriented architecture and, in particular, as it relates to the DoD Net-Centric Data Strategy and the NCES core services.
