The Little Emperors' New Toys Bin Zhao,2013-01-04 Drawing on original research I conducted in the late 1980s, the book argues for a critical approach to the study of children and television. It begins with critical reappraisals of previous empiricist and interpretative studies to set the ground for a different theoretical inquiry which links biography with history. The situated activity of children's television viewing therefore has to be related to the broader historical and cultural formations in post-Mao China. By way of a methodological pluralism of questionnaire survey, in-depth interviews and observation, the book provides the reader with a thorough critical analysis of the rise of the new commercial ethic in Chinese society in general, and in the sector of media and communications in particular, at the very historical turning point of the late 1980s. Soon after that, Deng Xiaoping made his significant tour to south China, reckoning a big step forward towards further liberalization and started to form a brave new world in China ever since.

Sparse Optimization Theory and Methods Yun-Bin Zhao,2018-07-04 Seeking sparse solutions of underdetermined linear systems is required in many areas of engineering and science such as signal and image processing. The efficient sparse representation becomes central in various big or high-dimensional data processing, yielding fruitful theoretical and realistic results in these fields. The mathematical optimization plays a fundamentally important role in the development of these results and acts as the mainstream numerical algorithms for the sparsity-seeking problems arising from big-data processing, compressed sensing, statistical learning, computer vision, and so on. This has attracted the interest of many researchers at the interface of engineering, mathematics and computer science. *Sparse Optimization Theory and Methods* presents the state of the art in theory and algorithms for signal recovery under the sparsity assumption. The up-to-date uniqueness conditions for the sparsest solution of underdetermined linear systems are described. The results for sparse signal recovery under the matrix property called range space property (RSP) are introduced, which is a deep and mild condition for the sparse signal to be recovered by convex optimization methods. This framework is generalized to 1-bit compressed sensing, leading to a novel sign recovery theory in this area. Two efficient sparsity-seeking algorithms, reweighted l1-minimization in primal space and the algorithm based on complementary slackness property, are presented. The theoretical efficiency of these algorithms is rigorously analysed in this book. Under the RSP assumption, the author also provides a novel and unified stability analysis for several popular optimization methods for sparse signal recovery, including l1-minimization, Dantzig selector and LASSO. This book incorporates recent development and the author's latest research in the field that have not appeared in other books.

Encyclopedia of Ocean Engineering Weicheng Cui,Shixiao Fu,Zhiqiang Hu,2022-06-29 This encyclopedia adopts a wider definition for the concept of ocean engineering. Specifically, it includes (1) offshore engineering: fixed and floating offshore oil and gas platforms; pipelines and risers; cables and moorings; buoy technology; foundation engineering; ocean mining; marine and offshore renewable energy; aquaculture engineering; and subsea engineering; (2) naval architecture: ship and special marine vehicle design; intact and damaged stability; technology for energy efficiency and green shipping; ship production technology; decommissioning and recycling; (3) polar and Arctic Engineering: ice mechanics; ice-structure interaction; polar operations; polar design; environmental protection; (4) underwater technologies: AUV/ROV design; AUV/ROV hydrodynamics;

maneuvering and control; and underwater-specific communicating and sensing systems for AUV/ROVs. It summarizes the A-Z of the background and application knowledge of ocean engineering for use by ocean scientists and ocean engineers as well as nonspecialists such as engineers and scientists from all disciplines, economists, students, and politicians. Ocean engineering theories, ocean devices and equipment, ocean design and operation technologies are described by international experts, many from industry and each entry offers an introduction and references for further study, making current technology and operating practices available for future generations to learn from. The book also furthers our understanding of the current state of the art, leading to new and more efficient technologies with breakthroughs from new theory and materials. As the land resources approach the exploitation limit, ocean resources are becoming the next choice for the sustainable development. As such, ocean engineering is vital in the 21st century.

The Politics of Cultural Capital Julia Lovell, 2006-03-31 In the 1980s China's politicians, writers, and academics began to raise an increasingly urgent question: why had a Chinese writer never won a Nobel Prize for literature? Promoted to the level of official policy issue and national complex, Nobel anxiety generated articles, conferences, and official delegations to Sweden. Exiled writer Gao Xingjian's win in 2000 failed to satisfactorily end the matter, and the controversy surrounding the Nobel committee's choice has continued to simmer. Julia Lovell's comprehensive study of China's obsession spans the twentieth century and taps directly into the key themes of modern Chinese culture: national identity, international status, and the relationship between intellectuals and politics. The intellectual preoccupation with the Nobel literature prize expresses tensions inherent in China's move toward a global culture after the collapse of the Confucian world-view at the start of the twentieth century, and particularly since China's re-entry into the world economy in the post-Mao era. Attitudes toward the prize reveal the same contradictory mix of admiration, resentment, and anxiety that intellectuals and writers have long felt toward Western values as they struggled to shape a modern Chinese identity. In short, the Nobel complex reveals the pressure points in an intellectual community not entirely sure of itself. Making use of extensive original research, including interviews with leading contemporary Chinese authors and critics, *The Politics of Cultural Capital* is a comprehensive, up-to-date treatment of an issue that cuts to the heart of modern and contemporary Chinese thought and culture. It will be essential reading for scholars of modern Chinese literature and culture, globalization, post-colonialism, and comparative and world literature.

The Palgrave Handbook of Sound Design and Music in Screen Media Liz Greene, Danijela Kulezic-Wilson, 2016-12-14 This book bridges the existing gap between film sound and film music studies by bringing together scholars from both disciplines who challenge the constraints of their subject areas by thinking about integrated approaches to the soundtrack. As the boundaries between scoring and sound design in contemporary cinema have become increasingly blurred, both film music and film sound studies have responded by expanding their range of topics and the scope of their analysis beyond those traditionally addressed. The running theme of the book is the disintegration of boundaries, which permeates discussions about industry, labour, technology, aesthetics and audiovisual spectatorship. The collaborative nature of screen media is addressed not only in scholarly chapters but also through interviews with key practitioners that include sound recordists, sound designers, composers, orchestrators and

music supervisors who honed their skills on films, TV programmes, video games, commercials and music videos.
