It Security Products for Corporate Users Peter Stelzhammer,Andreas Clementi,Thomas Arlt,Philippe Rödlach,2010 Most organizations are aware of the risks threatening their IT environment. Viruses, trojans, worms, exploits and many other threats represent a serious danger for the IT department. A collapse of the IT system could mean grave financial losses right up to insolvency for a company. The IT departments of companies are conscious of this problem. Getting the best protection against these threats is the only issue. A simple file antivirus solution alone is totally inade-quate, as there are too many threats from contaminated e-mails, exploits etc. What is re-quired is a comprehensive suite that provides protection against all of these. Functional Diversity Because of the immense functional diversity of various antivirus suites and corporate prod-ucts, it is becoming increasingly difficult for decision-makers in the IT sector to get a proper overview. Which product should one opt for and for which areas of protection? During these tests our main focus has not been on malware detection rates, but on the prod-ucts' handling and user-friendliness, and the scope of functionality. We have compiled the functional scope of various products in a detailed table. For malware detection rates of indi-vidual products please refer to the tests of our website: http: //www.av-comparatives.org

Cei care schimbă jocul Andreea Roșca,Mona Dîrțu,2014-06-05 Cei care schimbă jocul este prima carte care vorbește despre mecanismele și procesele de decizie ale primei generații de antreprenori români de după deșertificarea comunistă. Veți citi în această carte despre Dragoș Petrescu (City Grill, Caru' cu Bere), Mihai Marcu (MedLife), Vasile Armenean (Betty Ice), Dragoș și Adrian Pavăl (Dedeman), Adrian Mihai, Felix Pătrășcanu și Neculai Mihai (Fan Courier), Dan Șucu (Mobexpert), Florin și Măriuca Talpeș (Bitdefender și Softwin). Poveștile din această carte sunt despre câțiva oameni care, la un moment dat al vieții lor, au pornit pe propriul drum. Niciunul dintre ei nu a avut, la început, cine-știe-ce capital de pornire. Toți au luat-o de jos și foarte jos — de la venituri care în cel mai bun caz ajungeau de la o lună la alta, de la o prăvălie de câțiva metri pătrați, de la o tarabă, de la ,,compania de la noi din sufragerie". Niciunul n-avea habar, când a pornit, cum se fac afacerile. Au început fără mentori care să-i ferească de decizii greșite, fără MBA-uri, fără cărți de afaceri pe noptieră. Și niciunul n-a știut exact, când a pornit construcția propriului joc, cum va arăta toată povestea peste 10-15-20 de ani.

Managing Trust in Cyberspace Sabu M. Thampi,Bharat Bhargava,Pradeep K. Atrey,2013-12-14 In distributed, open systems like cyberspace, where the behavior of autonomous agents is uncertain and can affect other agents' welfare, trust management is used to allow agents to determine what to expect about the behavior of other agents. The role of trust management is to maximize trust between the parties and thereby provide a basis for cooperation to develop. Bringing together expertise from technology-oriented sciences, law, philosophy, and social sciences, Managing Trust in Cyberspace addresses fundamental issues underpinning computational trust models and covers trust management processes for dynamic open systems and applications in a tutorial style that aids in understanding. Topics include trust in autonomic and self-organized networks, cloud computing, embedded computing, multi-agent systems, digital rights management, security and quality issues in trusting e-government service delivery, and context-aware e-commerce applications. The book also presents a walk-through of online identity management and examines using trust and argumentation in recommender systems. It concludes with a comprehensive survey of anti-forensics for network security and a review of password security and protection. Researchers and practitioners in fields such as distributed computing, Internet technologies, networked systems, information systems, human computer interaction, human behavior modeling, and intelligent informatics especially benefit from a discussion of future trust management research directions including pervasive and ubiquitous computing, wireless ad-hoc and sensor networks, cloud computing, social networks, e-services, P2P networks, near-field communications (NFC), electronic knowledge management, and nano-communication networks.
