IT Security Products for Corporate Users Peter Stelzhammer, Andreas Clementi, Thomas Arlt, Philippe Rödlach, 2010 Most organizations are aware of the risks threatening their IT environment. Viruses, trojans, worms, exploits and many other threats represent a serious danger for the IT department. A collapse of the IT system could mean grave financial losses right up to insolvency for a company. The IT departments of companies are conscious of this problem. Getting the best protection against these threats is the only issue. A simple file antivirus solution alone is totally inadequate, as there are too many threats from contaminated e-mails, exploits etc. What is required is a comprehensive suite that provides protection against all of these. Functional Diversity Because of the immense functional diversity of various antivirus suites and corporate products, it is becoming increasingly difficult for decision-makers in the IT sector to get a proper overview. Which product should one opt for and for which areas of protection? During these tests our main focus has not been on malware detection rates, but on the products' handling and user-friendliness, and the scope of functionality. We have compiled the functional scope of various products in a detailed table. For malware detection rates of individual products please refer to the tests of our website: <http://www.av-comparatives.org>

**Cei care schimbă jocul** Andreea Roșca, Mona Dîrțu, 2014-06-05 Cei care schimbă jocul este prima carte care vorbește despre mecanismele și procesele de decizie ale primei generații de antreprenori români de după deșertificarea comunistă. Veți citi în această carte despre Dragoș Petrescu (City Grill, Caru' cu Bere), Mihai Marcu (MedLife), Vasile Armenean (Betty Ice), Dragoș și Adrian Pavăl (Dedeman), Adrian Mihai, Felix Pătrășcanu și Neculai Mihai (Fan Courier), Dan Șucu

(Mobexpert), Florin și Măriuca Talpeș (Bitdefender și Softwin). Poveștile din această carte sunt despre câțiva oameni care, la un moment dat al vieții lor, au pornit pe propriul drum. Niciunul dintre ei nu a avut, la început, cine-știe-ce capital de pornire. Toți au luat-o de jos și foarte jos – de la venituri care în cel mai bun caz ajungeau de la o lună la alta, de la o prăvălie de câțiva metri pătrați, de la o tarabă, de la „compania de la noi din sufragerie”. Niciunul n-avea habar, când a pornit, cum se fac afacerile. Au început fără mentori care să-i ferească de decizii greșite, fără MBA-uri, fără cărți de afaceri pe noptieră. Și niciunul n-a știut exact, când a pornit construcția propriului joc, cum va arăta toată povestea peste 10-15-20 de ani.

Suaboot, 2023-06-27 DATA EXFILTRATION THREATS AND

PREVENTION TECHNIQUES Comprehensive resource covering

threat prevention techniques for data exfiltration and applying machine learning applications to aid in identification and prevention Data Exfiltration Threats and Prevention Techniques provides readers the knowledge needed to prevent and protect from malware attacks by introducing existing and recently developed methods in malware protection using AI, memory forensic, and pattern matching, presenting various data exfiltration attack vectors and advanced memory-based data leakage detection, and discussing ways in which machine learning methods have a positive impact on malware detection. Providing detailed descriptions of the recent advances in data exfiltration detection methods and technologies, the authors also discuss details of data breach countermeasures and attack scenarios to show how the reader may identify a potential cyber attack in the real world. Composed of eight chapters, this book presents a better understanding of the core issues related to the cyber-attacks as well as the recent methods that have been developed in the field. In Data Exfiltration Threats and Prevention Techniques, readers can expect to find detailed information on: Sensitive data classification, covering text pre-processing, supervised text classification, automated text clustering, and other sensitive text detection approaches Supervised machine learning technologies for intrusion detection systems, covering taxonomy and benchmarking of supervised machine learning techniques Behavior-based malware detection using API-call sequences, covering API-call extraction techniques and detecting data stealing behavior based on API-call sequences Memory-based sensitive data monitoring for real-time data exfiltration detection and advanced time delay data exfiltration attack and detection Aimed at professionals and students alike, Data Exfiltration Threats and Prevention Techniques highlights a range of machine learning methods that can be used to detect potential data theft and identifies research gaps and the potential to make change in the future as technology continues to grow.

*Information Security for the Rest of Us* C. R. 3. Concepts llc,2018-03-31 Why is an ISMS so important? With the high number of computer attacks growing in complexity, data centers need new and faster sniffers with alerts to make sure data traveling through the LAN / WAN are clean and free of malicious code...Older systems focus on manual processes creates a delay between detection and response, leaving a time for attackers. General estimates say an above average hacker should have up to 12 hours from the time of intrusion to response. Because of this most of the resources, i.e. system administrators' skills will not thwart a successful attack. However, if the time between the intrusion and response is 6 hours or less, a successful attacks difficult. An automated IDS with real time detection and shorter response time provides the best defense. Another name for this is security control technology with the ability to determine zero day threats exist at the data center to computer stage. However, the reality is not all organizations have these stages of technology. Most never, see it coming and must deal with the incident or crisis occurs after the fact.

**Internet of Things Security Focused on the Healthcare Sector** Victor Singh,2019-08-22 Since the first IoT Botnet attack, Linux.Lightaidra, was discovered in 2012. 32 percent of IT

leaders are concerned about security as a top barrier to IoT success. The same report also indicates that 25 billion IoT units (excluding PCs, smartphones and tablets) will be installed by 2021 (Gartner.com, IoT E-book digital.pdf). Report from Statista, shows 42.62 billion devices by the end of 2022 (statista.com). Cisco mentioned in a recent interview, that the annual IP traffic between IoT devices will reach 4.8 Zettabyte per year by the end of 2022. (Interview Cisco) A report from IDC suggests that the Internet of Things will be a seven trillion USD industry by 2020. (S. Narang et al. 2018) Forrester analysts emphasize robust IoT security remains tangled up in the creation phase along with embryonic interoperability standards. (Forbes.com, IoT predictions for 2019) According to Mendez et al. (2018) there is still a significant work to be done in order to secure embedded computer devices within IoT. The number of IoT devices, as well as new technologies and scientific publications, has increased in the past five years. A recent interview with an expert in IoT from Microsoft and Cisco claimed that keeping IoT securing was and is going to be the most challenging task, this aligns also with findings from Singh et al. (2018). Bitdefender and Kaspersky claim that IoT attacks on medical devices will increase due to IoT inherent weakness and are considered an easy target. (Bitdefender and Kaspersky, 2019) In the healthcare sector, the Internet of Things (IoT) offers many benefits, ranging from monitoring patients more closely to using data to gain insights on patient care and the usage of these connected device market is expected to reach an estimated \$409.5 billion by 2023 (Market watch, 2019) Microsoft and the analysts firm Goldman Sachs are predicting that digital healthcare will revolutionize the industry, and are positive to IoT can and is doing for the healthcare industry, as it is increasing access to better diagnostics, treatments, and preventative care as well as surveillance of elderly and sick. All this will dramatically reduce the costs, but is it worth it? This case study highlights that the current state of

security in many medical devices allows hackers easy access to steal massive numbers of sensitive data from the healthcare provider's systems.

*Managing Trust in Cyberspace* Sabu M. Thampi, Bharat Bhargava, Pradeep K. Atrey, 2013-12-14 In distributed, open systems like cyberspace, where the behavior of autonomous agents is uncertain and can affect other agents' welfare, trust management is used to allow agents to determine what to expect about the behavior of other agents. The role of trust management is to maximize trust between the parties and thereby provide a basis for cooperation to develop. Bringing together expertise from technology-oriented sciences, law, philosophy, and social sciences, *Managing Trust in Cyberspace* addresses fundamental issues underpinning computational trust models and covers trust management processes for dynamic open systems and applications in a tutorial style that aids in understanding. Topics include trust in autonomic and self-organized networks, cloud computing, embedded computing, multi-agent systems, digital rights management, security and quality issues in trusting e-government service delivery, and context-aware e-commerce

applications. The book also presents a walk-through of online identity management and examines using trust and argumentation in recommender systems. It concludes with a comprehensive survey of anti-forensics for network security and a review of password security and protection. Researchers and practitioners in fields such as distributed computing, Internet technologies, networked systems, information systems, human computer interaction, human behavior modeling, and intelligent informatics especially benefit from a discussion of future trust management research directions including pervasive and ubiquitous computing, wireless ad-hoc and sensor networks, cloud computing, social networks, e-services, P2P networks, near-field communications (NFC), electronic knowledge management, and nano-communication networks.
