*Running to the Edge* Matthew Futterman,2020-04-14 The story of visionary American running coach Bob Larsen's mismatched team of elite California runners who would win championships and Olympic glory in a decades-long pursuit of the epic run. In the dusty hills above San Diego, Bob Larsen became America's greatest running coach. Running to the Edge is a riveting account of Larsen's journey, and his quest to discover the unorthodox training secrets that would lead American runners to breakthroughs never imagined. Futterman interweaves the dramatic stories of Larsen's runners with a fascinating discourse on the science behind human running, as well as a personal running narrative that follows Futterman's own checkered love-affair with the sport. The result is a narrative that will speak to every runner, a story of Larsen's triumphs--from high school cross-country meets to the founding of the cult-favorite, 70's running group, the Jamul Toads; from his long tenure as head coach at UCLA to the secret training regimen of world champion athletes like Larsen's protégé, Meb Keflezighi. Running to the Edge is a page-turner . . . a relentless crusade to run faster, farther.

*The Myth of Artificial Intelligence* Erik J. Larson,2021-04-06 “Artificial intelligence has always inspired outlandish visions—that AI is going to destroy us, save us, or at the very least radically transform us. Erik Larson exposes the vast gap between the actual science underlying AI and the dramatic claims being made for it. This is a timely, important, and even essential book.” —John Horgan, author of *The End of Science* Many futurists insist that AI will soon achieve human levels of intelligence. From there, it will quickly eclipse the most gifted human mind. The Myth of Artificial Intelligence argues that such claims are just that: myths. We are not on the path to developing truly intelligent machines. We don't even know where that path might be. Erik Larson charts a journey through the landscape of AI, from Alan Turing's early work to today's dominant models of machine learning. Since the beginning, AI researchers and enthusiasts have equated the reasoning approaches of AI with those of human intelligence. But this is a profound mistake. Even cutting-edge AI looks nothing like human intelligence. Modern AI is based on inductive reasoning: computers make statistical correlations to determine which answer is likely to be right, allowing software to, say, detect a particular face in an image. But human reasoning is entirely different. Humans do not correlate data sets; we make conjectures sensitive to context—the best guess, given our observations and what we already know about the world. We haven't a clue how to program this kind of reasoning, known as abduction. Yet it is the heart of common sense. Larson argues that all this AI hype is bad science and bad for science. A culture of invention thrives on exploring unknowns, not overselling existing methods. Inductive AI will continue to improve at narrow tasks, but if we are to make real progress, we must abandon futuristic talk and learn to better appreciate the only true intelligence we know—our own.

Movies Are Prayers Josh Larsen, 2017-06-13 Movies are our way of telling God what we think about this world and our place in it. . . . Movies can be many things: escapist experiences, historical artifacts, business ventures, and artistic expressions, to name a few. I'd like to suggest that they can also be prayers. Movies do more than tell a good story. They are expressions of raw emotion, naked vulnerability, and unbridled rage. They often function in the same way as prayers, communicating our deepest longings and joys to a God who hears each and every one. In this captivating book, Filmspotting co-host Josh Larsen brings a critic's unique perspective to how movies function as expressions to God of lament, praise, joy, confession, and more. His clear expertise and passion for the art of film, along with his thoughtful reflections on the nature of prayer, will bring you a better understanding of both. God's omnipresence means that you can find him whether you're sitting on your sofa at home or in the seats at the theater. You can talk to him wherever movies are shown. And when words fail, the perfect film might be just what you need to jump-start your conversations with the Almighty.

Economic Risks of Climate Change Trevor Houser, Solomon Hsiang, Robert Kopp, Kate Larsen, Michael Delgado, Amir Jina, Michael Mastrandrea, Shashank Mohan, Robert Muir-Wood, D. J. Rasmussen, James Rising, Paul Wilson, 2015-08-18 Climate change threatens the economy of the United States in myriad ways, including increased flooding and storm damage, altered crop yields, lost labor productivity, higher crime, reshaped public-health patterns, and strained energy systems, among many other effects. Combining the latest climate models, state-of-the-art econometric research on human responses to climate, and cutting-edge private-sector risk-assessment tools, Economic Risks of Climate Change: An American Prospectus crafts a game-changing profile of the economic risks of climate change in the United States. This prospectus is based on a critically acclaimed independent assessment of the economic risks posed by climate change commissioned by the Risky Business Project. With new contributions from Karen Fisher-Vanden, Michael Greenstone, Geoffrey Heal, Michael Oppenheimer, and Nicholas Stern and Bob Ward, as well as a foreword from Risky Business cochairs Michael Bloomberg, Henry Paulson, and Thomas Steyer, the book speaks to scientists, researchers, scholars, activists, and policy makers. It depicts the distribution of escalating climate-change risk across the country and assesses its effects on aspects of the economy as varied as hurricane damages and violent crime. Beautifully illustrated and accessibly written, this book is an essential tool for helping businesses and governments prepare for the future.
