**Cell Biology of Plant and Fungal Tip Growth** Anja Geitmann, Mauro Cresti, Ian Brent Heath, 2001 Tip growth is a type of cellular growth that is represented in many and diverse cell types, which are important to plant breeding (pollen tubes), agriculture (root hairs) and plant and animal pathology (fungal hyphae). Also moss and fern protonemata as well as algal zygotes and yeasts exhibit the features unique for tip growth: directable apical linear growth which renders the cell able to penetrate its growth environment. In this volume various cell biological aspects of this particular growth phenomenon are discussed, such as the initiation and maintenance of an anisotropically growing cell, the function of cytoskeletal elements, extracellular matrix and turgor, the regulation of ion homeostasis, the mechanism of signalling events, and the interaction of the cell with the environment.

**Down** Brett Battles, 2014-11-24 Matt Hamilton's last words have led Daniel Ash and his team to the snow-covered town of Everton, Vermont. On a field just outside city limits sits an unassuming hut. But this is no innocent building. Inside is the entrance to the secret Project Eden base known as Dream Sky, the key to the Project's success. Or its defeat, as Ash hopes. To give the team the best chance to succeed, Resistance groups have moved into position outside Project installations around the globe. The purpose: to create diversions that will draw Project attention away from Dream Sky. These groups have been waiting for the signal to attack. The wait is over.

Zenith Chase Untermeyer, 2016-08-24 Zenith: In the White House with George H. W. Bush is the third in Ambassador Untermeyer's series of books based on his personal journals compiled during his tenure in the service of George H. W. Bush, first as vice president, then as president. The present work begins with Bush's election in November 1988 and concludes with Untermeyer's service as director of the Voice of America, from 1991 until Bush's defeat by Clinton in 1992. Filled with the author's personal observations and commentary on White House events, personalities, and issues, Zenith is written largely from Untermeyer's perspective as President Bush's director of personnel, a position that placed him squarely at the center of the politically charged process of making recommendations on some 3,500 federal appointments.

**Krylov Methods for Nonsymmetric Linear Systems** Gérard Meurant, Jurjen Duintjer Tebbens, 2020-10-02 This book aims to give an encyclopedic overview of the state-of-the-art of Krylov subspace iterative methods for solving nonsymmetric systems of algebraic linear equations and to study their mathematical properties. Solving systems of algebraic linear equations is among the most frequent problems in scientific computing; it is used in many disciplines such as physics, engineering, chemistry, biology, and several others. Krylov methods have progressively emerged as the iterative methods with the highest efficiency while being very robust for solving large linear systems; they may be expected to remain so, independent of progress in modern computer-related fields such as parallel and high performance computing. The mathematical properties of the methods are described and analyzed along with their behavior in finite precision arithmetic. A number of numerical examples demonstrate the properties and the behavior of the described methods. Also considered are the methods' implementations and coding as Matlab®-like functions. Methods which became popular recently are considered in the general framework of Q-OR (quasi-orthogonal )/Q-MR (quasi-minimum) residual methods. This book can be useful for both practitioners and for readers who are more interested in theory. Together with a review of the state-of-the-art, it presents a number of recent theoretical results of the authors, some of them unpublished, as well as a few original algorithms. Some of the derived formulas might be useful for the design of possible new methods or for future analysis. For the more applied user, the book gives an up-to-date overview of the majority of the available Krylov methods for nonsymmetric linear systems, including well-known convergence properties and, as we said above, template codes that can serve as the base for more individualized and elaborate implementations.

**New Paradise** Brett Hackett, 2018-06 A timeless world built by desire. For one young man, a desire for perfection in togetherness and friendship illustrated by his 'art': photography of the landscapes housing the happy memories of his youth. For one young woman, a desire to escape herself, and the person she feels as though she has been forced to become under the circumstances, a life that has never treated her fairly, towards a life filled with the dreams she has always wished for. Thus, the creation of the Isle, where beauty and wonder resides, and one other entirely new being: The manifestation of the lost souls visiting here, born from their prayers, imprisoned by the very wishes that created him.

Marmol Radziner + Associates Leo Marmol, Radziner Ron, 2008-05-15 If you design some of the most stylish and beautiful modern houses in the Los Angeles area, including many for celebrity clients, how do you ensure that the projects are built to the standards you, and your patrons, demand? If you're the highly sought-after firm of Marmol Radziner + Associates, you do what an increasing number of practices are doing: become your own contractor,

building your projects with the same rigor and beauty with which they were designed, and, in the process, remake your firm into one of the most visible and successful design-build firms in the country. Praised as modernist savants by the New York Times, Marmol Radziner + Associates have redefined the indoor-outdoor California lifestyle made famous by legendary mid-century modernists such as Richard Neutra and Albert Frey. Their multifaceted projects include not only residential, commercial, and institutional buildings but also mid-century modern home restorations, furniture, and prefab home manufacturing. Whether building a Hollywood hideaway that floats ethereally over a lush garden or a childcare center for LAX airport employees, each project embodies the philosophy of the firm by integrating finely crafted details with technically inventive modern spaces. Marmol Radziner + Associates explains in detail how this pioneering design-build firm one of the few led by architects has managed to integrate building installation, construction, and fabrication into one seamless design process. Architects Leo Marmol and Ron Radziner give an open and honest account of the inner workings of their award-winning firm. Their personal perspectives combined with interviews with employees, clients, and collaborators highlight the synergistic nature of their work. This unique monograph takes the reader from the early stages of conceptual design all the way through construction with special attention focused on their innovative solutions to a variety of on-site challenges.

*New Concepts in the Pathogenesis of NIDDM* Claes-Goran Östenson, Suad Efendic, Mladen Vranic, 2012-12-06 The pathogenesis of non-insulin-dependent diabetes mellitus (NIDDM) has attracted the interest of our group during the last three decades. As early as 1969, a Nobel Symposium dealing with this topic was organized in Stockholm. This was followed in 1987 by a Nobel Conference devoted to the same subject. The main purpose of these meetings was to bring together the most distinguished scientists from all over the world and present theories on molecular and genetic mechanisms responsible for the development of glucose intolerance in NIDDM. This idea was followed also in the present symposium, *New Concepts in the Pathogenesis of NIDDM*, organized with diabetologists from Toronto in Canada. Our purpose is to biannually organize international meetings covering important aspects of diabetes research, hoping that this type of interaction may result in new concepts and treatment alternatives. For us, participating in this symposium in September 1992, the meeting in Stockholm was very stimulating and innovative. It is a special pleasure that almost all invited lecturers submitted manuscripts. Thus, the publication of the proceedings of the symposium makes it possible for all interested in diabetes research to share new ideas and findings presented at the meeting.
