**The Alchemy of Air** Thomas Hager, 2008-09-09 A sweeping history of tragic genius, cutting-edge science, and the Haber-Bosch discovery that changed billions of lives—including your own. At the dawn of the twentieth century, humanity was facing global disaster: Mass starvation was about to become a reality. A call went out to the world's scientists to find a solution. This is the story of the two men who found it: brilliant, self-important Fritz Haber and reclusive, alcoholic Carl Bosch. Together they discovered a way to make bread out of air, built city-sized factories, and saved millions of lives. But their epochal triumph came at a price we are still paying. The Haber-Bosch process was also used to make the gunpowder and explosives that killed millions during the two world wars. Both men were vilified during their lives; both, disillusioned and disgraced, died tragically. *The Alchemy of Air* is the extraordinary, previously untold story of a discovery that changed the way we grow food and the way we make war—and that promises to continue shaping our lives in fundamental and dramatic ways.

*In Cold Blood* Truman Capote, 2013-02-19 Selected by the Modern Library as one of the 100 best nonfiction books of all time From the Modern

Library's new set of beautifully repackaged hardcover classics by Truman Capote—also available are *Breakfast at Tiffany's* and *Other Voices, Other Rooms* (in one volume), *Portraits and Observations*, and *The Complete Stories* Truman Capote's masterpiece, *In Cold Blood*, created a sensation when it was first published, serially, in *The New Yorker* in 1965. The intensively researched, atmospheric narrative of the lives of the Clutter family of Holcomb, Kansas, and of the two men, Richard Eugene Hickock and Perry Edward Smith, who brutally killed them on the night of November 15, 1959, is the seminal work of the "new journalism." Perry Smith is one of the great dark characters of American literature, full of contradictory emotions. "I thought he was a very nice gentleman," he says of Herb Clutter. "Soft-spoken. I thought so right up to the moment I cut his throat." Told in chapters that alternate between the Clutter household and the approach of Smith and Hickock in their black Chevrolet, then between the investigation of the case and the killers' flight, Capote's account is so detailed that the reader comes to feel almost like a participant in the events.

Oceaning Adam Fish, 2024-01-19 Drones are revolutionizing ocean conservation. By flying closer and seeing more, drones enhance intimate contact between ocean scientists and activists and marine life. In the process, new dependencies between nature, technology, and humans emerge, and a paradox becomes apparent: Can we have a wild ocean whose survival is reliant upon technology? In Oceaning, Adam Fish answers this question through eight stories of piloting drones to stop the killing of porpoises, sharks, and seabirds and to check the vitality of whales, seals, turtles, and coral reefs. Drone conservation is not the end of nature. Instead, drone conservation results in an ocean whose flourishing both depends upon and escapes the control of technologies. Faulty technology, oceanic and atmospheric turbulence, political corruption, and the inadequacies of basic science serve to foil governance over nature. Fish contends that what emerges is an ocean/culture—a flourishing ocean that is distinct from but exists alongside humanity.

Ocean Acidification National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on the Development of an Integrated Science Strategy for Ocean Acidification Monitoring, 2010-10-14 The ocean has absorbed a significant portion of all human-made carbon dioxide emissions. This benefits human society by moderating the rate of climate change, but also causes unprecedented changes to ocean chemistry. Carbon dioxide taken up by the ocean decreases the pH of the water and leads to a suite of chemical changes collectively known as ocean acidification. The long term consequences of ocean acidification are not known, but are expected to result in changes to many ecosystems and the

services they provide to society. Ocean Acidification: A National Strategy to Meet the Challenges of a Changing Ocean reviews the current state of knowledge, explores gaps in understanding, and identifies several key findings. Like climate change, ocean acidification is a growing global problem that will intensify with continued CO<sub>2</sub> emissions and has the potential to change marine ecosystems and affect benefits to society. The federal government has taken positive initial steps by developing a national ocean acidification program, but more information is needed to fully understand and address the threat that ocean acidification may pose to marine ecosystems and the services they provide. In addition, a global observation network of chemical and biological sensors is needed to monitor changes in ocean conditions attributable to acidification.

**Climate Change in the South Pacific: Impacts and Responses in Australia, New Zealand, and Small Island States** Alexander Gillespie, William C.G. Burns, 1999-11-30 ALEXANDER GILLESPIE & WILLIAM C.G. BURNS The idea for this book grew out of the Ecopolitics conference in Canberra, Australia in 1996. The conference captured the ferment of the climate change debate in the South Pacific, as well as some its potential implications for the region's inhabitants and ecosystems. At that conference, one of the editors (Gillespie) delivered a paper on climate change issues in the region, as did Ros Taplin and Mark Diesendorf, who are also contributors to this volume. This book focuses on climate change issues in Australia, New Zealand, and the small island nations in the Pacific as the world struggles to cope with possible the impacts of environmental change and to formulate effective responses. While Australia and New Zealand's per capita emissions of greenhouse gases are among the highest in the

world, their aggregate contributions are small. However, both nations may exert a disproportionate influence in the global greenhouse debate because their obstinate positions at recent conferences of the parties to the United Nations Framework Convention on Climate Change (UNFCCC) may provide justification for other developed nations, as well as developing countries, to refuse to make meaningful reductions in their greenhouse gas emissions.

**Unmanned Systems** Dr. Terence M. Dorn, 2021-12-02 The threat of an attack involving an unmanned system armed with a weapon of mass destruction is a present one. With two million drones projected to be flying US skies in 2020, unmanned aircraft systems in the air domain pose a significant challenge to the nation's security. Other technological advancements, such as artificial intelligence, combined with unmanned systems, have transformed the threat's very nature, yet the skies are not the only domain of concern. The technology is also developing rapidly in unmanned undersea and surface systems, expanding potential weapons of mass destruction delivery options. This publication is an examination of unmanned aerial systems (UAS), unmanned surface systems (USS), and unmanned undersea systems (UUS). The technological innovation that led to the global commercialization of UAS is underway with USS and UUS. Until recently, no known scholarly studies

existed that examined the vulnerabilities of one sector of US critical infrastructure to attack by UAS until A Phenomenological Examination of US Nuclear Power Plants to Attack by Unmanned Aerial Systems was published late in 2020. According to the Nuclear Regulatory Commission (NRC), there had been fifty-seven UAS incursions over twenty-four US nuclear power plants in the past five years, representing one of sixteen sectors of US critical infrastructure (Gardiner 2016; Rogoway and Trevithick 2020; Hambling 2020). Federal departments and organizations have largely ignored the threat potential that UAS pose despite the strategic guidance laid out in the 2017 National Security Strategy of the US. The nation's national security demands a close examination of the vulnerabilities and is immediately working to close those security gaps. This publication will focus on the emergency of new UAS capabilities and highlight the latest technologies, capabilities, and the significant national security threat implications that UAS, USS, and UUS platforms represent to US critical infrastructure.
