Innover ou disparaître Olivier Laborde,2017-05-10 Les grandes entreprises ont un impératif de croissance. La compression des coûts a longtemps été une solution, mais qui semble aujourd'hui atteindre ses limites. Pour faire face à la concurrence de plus en plus féroce, la seule solution semble être d'innover mais les investissements restent frileux. Alors comment résoudre cette équation? En créant un Lab, c'est-à-dire une structure autonome dans l'entreprise, qui mobilise une équipe pour créer et tester des projets, sur lesquels l'entreprise décidera ensuite d'investir ou non. Cet ouvrage, illustré de nombreux exemples et avis d'experts, propose une nouvelle méthode pour innover et permettre aux entreprises de se renouveler.

Humaniser l'entreprise Les Entrepreneurs Et Dirigeants Chrétiens,Sophie Izoard,2022-02-09T00:00:00+01:00 Trente-trois entrepreneurs. Trente-trois personnalités. Trente-trois aventures. Non pas aventures solitaires mais avec les autres, pour les autres. « L'entreprise est une aventure humaine » : nul utopisme naïf dans ces propos marqués du sceau de la sincérité mais bilan lucide et inspiré d'années de confrontations avec la réalité de la vie économique dans toutes ses dimensions, et dans ce qu'elle peut avoir parfois de plus dure. De la création d'une entreprise à sa transmission, en passant par les questions de l'implantation, du recrutement, du développement, de l'échec, rien n'est masqué des joies et des souffrances de celles et ceux qui placent leur action sous la lumière du bien commun. Rarement des chefs d'entreprise et des dirigeants auront à ce point ouvert leur cœur afin de donner à voir ce qui les fait avancer au quotidien : l'espérance de bâtir un monde meilleur.

Continuum Clemens Lode,2018-05-23 Being a hero means standing up to false heroes. To gain this ability, we need to have a good grasp of the nature of the universe and to be able to understand our own minds. This book introduces you to the most current and most advanced topics in science. It is easy to read, stays away from complicated mathematical details, and introduces concepts from the ground up. Becoming a hero requires gaining an understanding of what the greatest minds of history have pondered. Philosophy for Heroes summarizes their wisdom and connects it with the modern world.What would lead a computer scientist and project manager to turn to philosophy for answers? Clemens Lode has a passion for solving problems by applying ideas from nature. In his examination into what could give lifeless machines a heart, he found that the answer requires a holistic examination of the world.With his book series Philosophy for Heroes, Lode bridges the gap between science, philosophy, psychology, and ultimately leadership. Through addressing these topics and challenging popular myths, we can lay the groundwork for becoming modern-day heroes.In this, the second book in a four-part series, he explores questions like: What is the quantum theory and how can we interpret it? How did the universe come out of nothingness and how did life develop from non-living matter? What is the origin of our own creativity? Through addressing these questions and challenging popular myths, we can lay the groundwork for becoming modern-day heroes. Similarity-Based Clustering Thomas Villmann, M. Biehl, Barbara Hammer, Michel Verleysen, 2009-06-02 This book is the outcome of the Dagstuhl Seminar on Similarity-Based Clustering held at Dagstuhl Castle, Germany, in Spring 2007. In three chapters, the three fundamental aspects of a theoretical background, the representation of data and their connection to algorithms, and particular challenging applications are considered. Topics discussed concern a theoretical investigation and foundation of prototype based learning algorithms, the development and extension of models to directions such as general data structures and the application for the domain of medicine and biology. Similarity based methods find widespread applications in diverse application domains, including biomedical problems, but also in remote sensing, geoscience or other technical domains. The presentations give a good overview about important research results in similarity-based learning, whereby the character of overview articles with references to correlated research articles makes the contributions particularly suited for a first reading concerning these topics.

Symbolic Data Analysis and the SODAS Software Edwin Diday, Monique Noirhomme-Fraiture, 2008-04-15 Symbolic data analysis is a relatively new field that provides a range of methods for analyzing complex datasets. Standard statistical methods do not have the power or flexibility to make sense of very large datasets, and symbolic data analysis techniques have been developed in order to extract knowledge from such data. Symbolic data methods differ from that of data mining, for example, because rather than identifying points of interest in the data, symbolic data methods allow the user to build models of the data and make predictions about future events. This book is the result of the work of a pan-European project team led by Edwin Diday following 3 years work sponsored by EUROSTAT. It includes a full explanation of the new SODAS software developed as a result of this project. The software and methods described highlight the crossover between statistics and computer science, with a particular emphasis on data mining.

Visual Data Mining Simeon Simoff, Michael H. Böhlen, Arturas Mazeika, 2008-07-23 Visual Data Mining—Opening the Black Box Knowledge discovery holds the promise of insight into large, otherwise opaque datasets. The nature of what makes a rule interesting to a user has been discussed widely but most agree that it is a subjective quality based on the practical usefulness of the information. Being subjective, the user needs to provide feedback to the system and, as is the case for all systems, the sooner the feedback is given the quicker it can influence the behavior of the system. There have been some impressive research activities over the past few years but the question to be asked is why is visual data mining only now being investigated commercially? Certainly, there have been arguments for visual data mining for a number of years – Ankerst and others argued in 2002 that current (autonomous and opaque) analysis techniques are inefficient, as they fail to directly embed the user in dataset exploration and that a better solution involves the user and algorithm being more tightly coupled. Grinstein stated that the “current state of the art data mining tools are automated, but the perfect data mining tool is interactive and highly participatory,” while Han has suggested that the “data selection and viewing of mining results should be fully interactive, the mining process should be more interactive than the current state of the art and embedded applications should be fairly automated . ” A good survey on 3 techniques until 2003 was published by de Oliveira and Levkowitz .
