Histories of the Hanged: The Dirty War in Kenya and the End of Empire David

Anderson, 2011-02-07 A remarkable account of Britain's last stand in Kenya. This is imperial history at its very best.--John Hope Franklin In a gripping narrative that is all but impossible to put down (Joseph C. Miller), *Histories of the Hanged* exposes the long-hidden colonial crimes of the British in Kenya. This groundbreaking work tells how the brutal war between the colonial government and the insurrectionist Mau Mau between 1952 and 1960 dominated the final bloody decade of imperialism in East Africa. Using extraordinary new evidence, David Anderson puts the colonial government on trial with eyewitness testimony from over 800 court cases and previously unseen archives. His research exonerates the Kikuyu rebels; hardly the terrorists they were thought to be; and reveals the British to be brutal aggressors in a dirty war that involved leaders at the highest ranks of the British government. This astonishing piece of scholarship portrays a teetering colonial empire in its final phase; employing whatever military and propaganda methods it could to preserve an order that could no longer hold.

Phosphagenkinases S. N. Lyzlova, V. E. Stefanov, 1990-12-07 *Phosphagen Kinases* discusses phosphagen kinases and their substrates, and demonstrates that the role of the phosphagen-phosphagen kinase system is not limited to energy depositing functions. The book is unique in its complex biological, chemical, and physiological coverage of the family of related enzymes and phosphagen kinases. This book also emphasizes creatine and arginine kinases in the evolution of phosphagen kinases and provides information regarding biosynthesis, structure, physico-chemical properties, catalytic mechanisms and the regulation of the enzymes. Other topics discussed include heterogeneity; intracellular localization; and developmental, physiological, and pathological changes of creatine kinase. Researchers and students specializing in biochemistry, enzymology, zoology, developmental biology, physiology, and medicine will find the book to be an invaluable source of information.

Mullite Formations Akshoy Kumar Chakraborty, 2021-11-29 Mullite is the most important crystalline phase in fired products belonging to the $\text{Al}_2\text{O}_3\text{-SiO}_2$ mullite system, such as whiteware articles used in daily life (e.g., low- and high-temperature hard porcelain, sanitaryware, and structural clay products). Mullite has attracted increasing interest due to its excellent high-temperature strength and creep resistance, good chemical and thermal stability, low thermal expansion coefficient, and good dielectric properties. Mullitization has been a subject of extensive and controversial investigations. This book comprehensively covers the synthesis and six types of phase transformation of mullite. Part I reviews previous research on the synthesis of mullite gels, advantages and disadvantages of different chemical routes of synthesis, and phase transformation processes. Part II discusses the nature and characterization of spinel and mullite phases and different mechanisms of mullite formation, as conjectured by various researchers. Part III deals with the critical analysis of the spinel and mullite phases and evolution of mullite formation routes. Every chapter is accompanied by detailed diagrams and a comprehensive list of references.

Battles of the Jacobite Rebellions Jonathan Oates, 2020-01-19 "Oates examines in minute detail why the Jacobite forces posed such a threat to William and Mary, Queen Anne, and George I and II." —Books Monthly Many books have been written about the Jacobite rebellions—the armed attempts made by the Stuarts to regain the British throne between 1689 and 1746—and in particular about the risings of 1689, 1715, 1719 and 1745. The key battles have been described in graphic detail. Yet no previous book has given a comprehensive military account of the campaigns in their entirety—and that is the purpose of Jonathan Oates's new history. For over fifty years the Jacobites posed a serious threat to the governments of William and Mary, Queen Anne and George I and II. But they were unable to follow up their victories at Killiecrankie, Prestonpans and Falkirk, and the overwhelming defeat suffered by Bonnie Prince Charlie's army when it confronted the Duke of Cumberland's forces at Culloden in 1746 was decisive. The author uses vivid eyewitness testimony and contemporary sources, as well as the latest archaeological evidence, to trace the course of the conflict, and offers an absorbing insight into the makeup of the opposing sides, their leadership, their troops and the strategy and tactics they employed. His distinctive approach gives the reader a long perspective on a conflict which is often viewed more narrowly in terms of famous episodes and the careers of the leading men. "A novel and rewarding approach in providing a comprehensive account of the Jacobite rebellions. This is a story of a family torn apart by religion and entitlement. Highly Recommended." —Firetrench

Biological NMR Spectroscopy John L. Markley, Stanley J. Opella, 1997-01-30 This book presents a critical assessment of progress on the use of nuclear magnetic resonance spectroscopy to determine the structure of proteins, including brief reviews of the history of the field along with coverage of current clinical and in vivo applications. The book, in honor of Oleg Jardetsky, one of the pioneers of the field, is edited by two of the most highly respected investigators using NMR, and features contributions by most of the leading workers in the field. It will be valued as a landmark publication that presents the state-of-the-art perspectives regarding one of today's most important technologies.

Symplectic 4-Manifolds and Algebraic Surfaces Denis Auroux, Fabrizio Catanese, Marco Manetti, Gang Tian, Paul Seidel, Ivan Smith, Bernd Siebert, 2008-04-17 Modern approaches to the study of symplectic 4-manifolds and algebraic surfaces combine a wide range of techniques and sources of inspiration. Gauge theory, symplectic geometry, pseudoholomorphic curves, singularity theory, moduli spaces, braid groups, monodromy, in addition to classical topology and algebraic geometry, combine to make this one of the most vibrant and active areas of research in mathematics. It is our hope that the five lectures of the present volume given at the C.I.M.E. Summer School held in Cetraro, Italy, September 2-10, 2003 will be useful to people working in related areas of mathematics and will become standard references on these topics. The volume is a coherent exposition of an active field of current research focusing on the introduction of new methods for the study of moduli spaces of complex structures on algebraic surfaces, and for the investigation of symplectic topology in dimension 4 and higher.
