A Patient Safety Handbook for Ambulatory Care Providers Joint Commission Resources, Inc, 2009-01-01 Ambulatory care organizations are challenged by medication safety, infection prevention and control, environment of care, communication, and other patient safety issues; however, most available benchmarks and initiatives concerning patient safety were developed specifically for hospitals and do not translate easily to ambulatory care settings. Ambulatory surgical centers, office-based surgery practices, community health centers, diagnostic imaging centers, urgent care centers, medical and dental centers, and other ambulatory care facilities face critical and unique patient safety issues on a daily basis. A Patient Safety Handbook for Ambulatory Health Care provides proven solutions for keeping patients safe in an ambulatory setting and addresses challenging patient safety concerns. The book explores seven system-level issues:

patient-centered care, communication, medication use, surgical safety, infection prevention and control, environment and equipment, and staff education and training. It contains useful tools that educate staff and physicians about patient safety in ambulatory care: Easy-to-adapt forms, checklists, and solutions Critical lessons learned about which approaches work, which don't, and why Real-life case studies on improving patient safety in ambulatory settings Discussions on growing concerns in ambulatory health care, such as the following: Safe medication use, such as chemotherapy drugs and multi-use medication vials Anesthesia issues, such as undiagnosed sleep apnea, patient falls, and malignant hyperthermia Effective infection control, such as hand hygiene and flash sterilization

Machine Intelligence and Signal Processing Richa Singh,Mayank Vatsa,Angshul Majumdar,Ajay Kumar,2015-10-01 This book comprises chapters on key problems in machine learning and signal processing

arenas. The contents of the book are a result of a 2014 Workshop on Machine Intelligence and Signal Processing held at the Indraprastha Institute of Information Technology. Traditionally, signal processing and machine learning were considered to be separate areas of research. However in recent times the two communities are getting closer. In a very abstract fashion, signal processing is the study of operator design. The contributions of signal processing had been to device operators for restoration, compression, etc. Applied Mathematicians were more interested in operator analysis. Nowadays signal processing research is gravitating towards operator learning – instead of designing operators based on heuristics (for example wavelets), the trend is to learn these operators (for example dictionary learning). And thus, the gap between signal processing and machine learning is fast converging. The 2014 Workshop on Machine Intelligence and Signal Processing was one of the few unique events that are focused on the convergence of the two fields. The book is comprised of chapters based on the top presentations at the workshop. This book has three chapters on various topics of biometrics – two are on face detection and one on iris recognition; all from top researchers in their field. There are four chapters on different biomedical signal / image processing problems. Two of these are on retinal vessel classification and extraction; one on biomedical signal acquisition and the fourth one on region detection. There are three chapters on data analysis – a topic gaining immense popularity in industry and academia. One of these shows a novel use of compressed sensing in missing sales data interpolation. Another chapter is on spam detection and the third one is on simple one-shot movie rating prediction. Four other chapters cover various cutting edge miscellaneous topics on character recognition, software effort prediction, speech recognition and non-linear sparse recovery. The

contents of this book will prove useful to researchers, professionals and students in the domains of machine learning and signal processing.
