Global Application of Prescribed Fire provides a first-hand perspective of the various methods and ways people around the world view and use prescribed fire. It covers the logistics, constraints and social dynamics surrounding the intentional use and application of fire by humans, and demonstrates how, why, when and where prescribed fire is used in different regions. Written by international experts, the book has four key objectives: explore new techniques, ideas and thoughts on how to apply prescribed fire from a global perspective; provide regional case studies covering issues that may constrain or enhance prescribed fire projects; stimulate cross-cultural conversations about how fires function in ecosystems; and relate prescribed fire to wildfire regimes with implications for protecting life and property, as well as sustaining local fire cultures and unique fire-dependent flora and fauna. This comprehensive book will provide fire practitioners, researchers, agencies and policymakers with key ecological and managerial insight of how prescribed fires are conducted around the globe.

*Heathlands* R. Aerts, G.W. Heil, 2013-03-14 Increased atmospheric nitrogen deposition and changes in the management of heathlands have caused a

significant change in the species composition of the NW-European heathlands. This change from ericaceous towards gramineous dominance is analysed in detail in *Heathlands: Patterns and Processes in a Changing Environment*. Special emphasis is put on the effects of increased atmospheric nutrient input on nutrient cycling, competition between plant species and plant--herbivore interactions. The possibilities for the long-term conservation of heathlands are discussed by considering regeneration from seed and the usefulness of mathematical management models. The book provides a synthesis of pure and applied plant ecology. It is vital reading for plant ecologists, biological conservationists, heathland managers and government decision makers.

Human Centered Software Product Lines Jean-Sébastien Sottet,Alfonso García Frey,Jean Vanderdonckt,2017-10-05 This book takes a unique HCI approach to the concept of Software Product Line (SPL) and discusses the peculiarities of human-computer interaction not usually addressed in more traditional approaches. SPL is based on industrial practices for defining a range of software products. SPL design identifies commonalities and differences between the various software versions, modelling and managing the software variability. Recent research has focused on reconciling the different viewpoints of SPL and HCI, and in particular emphasizing the specific variability of HCI and the management of complex SPL models that could

benefit from HCI in terms of representation, manipulation and visualization. This edited volume includes research that addresses the SPL for HCI and HCI for SPL. In putting together these two research streams, the groundwork is laid for future research into this important area. Both the HCI and the software engineering communities will find this book an invaluable resource.
