Security Beyond the State Claudia Morsut, Daniela Irrera, 2018-06-11 Which is the role of the European Union in dealing with crises that go beyond the nation states borders – terrorism, proliferation of weapons of mass destruction, regional conflicts, state failure, organised crime, natural and man-made disasters? The authors assess the main challenge for the EU: the need to operate in a multidimensional setting where with a wide range of actors, such as member states, national and international NGOs, international organisations (NATO and the UN in primis), as well as a wide range of activities, rules and norms are generated for these diversified crises.

3D User Interfaces Doug Bowman, Ernst Kruijff, Joseph J. LaViola Jr., Ivan P. Poupyrev, 2004-07-26 Here's what three pioneers in computer graphics and human-computer interaction have to say about this book: "What a tour de force—everything one would want—comprehensive, encyclopedic, and authoritative." — Jim Foley "At last, a book on this important, emerging area. It will be an indispensable reference for the practitioner, researcher, and student interested in 3D user interfaces." — Andy van Dam "Finally, the book we need to bridge the dream of 3D graphics with the user-centered reality of interface design. A thoughtful and practical guide for researchers and product developers. Thorough review, great examples." — Ben Shneiderman As 3D technology becomes available for a wide range of applications, its successful deployment will require well-designed user interfaces (UIs). Specifically, software and hardware developers will need to understand the interaction principles and techniques peculiar to a 3D environment. This understanding, of course, builds on usability experience with 2D UIs. But it also involves new and unique challenges and opportunities. Discussing all relevant aspects of interaction, enhanced by instructive examples and guidelines, 3D User Interfaces comprises a single source for the latest theory and practice of 3D UIs. Many people already have seen 3D UIs in computer-aided design, radiation therapy, surgical simulation, data visualization, and virtual-reality entertainment. The next generation of computer games, mobile devices, and desktop applications also will feature 3D interaction. The authors of this book, each at the forefront of research and development in the young and dynamic field of 3D UIs, show how to produce usable 3D applications that deliver on their enormous promise. Coverage includes: The psychology and human factors of various 3D interaction tasks Different approaches for evaluating 3D UIs Results from empirical studies of 3D interaction techniques Principles for choosing appropriate input and output devices for 3D systems Details and tips on implementing common 3D interaction techniques Guidelines for selecting the most effective interaction techniques for common 3D tasks Case studies of 3D UIs in real-world applications To help you keep pace with this fast-evolving field, the book's Web site, www.3dui.org, will offer information and links to the latest 3D UI research and applications.

Naval Modernisation in South-East Asia Geoffrey Till, Jane Chan, 2013-08-15 This edited volume analyses the naval arms race in South-East Asia, and reviews the content, purposes and consequences of the naval policies and development of the main countries of the region. The rise of naval capability in the countries of the Asia-Pacific Region is increasingly recognised as a major indicator of the 'rise of Asia' and its increasing importance in the world's political, economic and

strategic future. Most coverage focusses solely on the navies of the 'big four' – the US, China, India and Japan; however, the region's other navies, though much smaller, are significant too. Given the current focus on the South China Sea and the Obama administration's pivot to Asia, naval development in South-East Asia is of particular relevance. This book first identifies the issues involved in defence acquisition in this area. It then goes on to establish some templates of naval modernisation as a means of assessing the policies of individual countries in the region, by looking at the naval policies of the big four. Finally, the general issue of naval modernisation in South-East Asia is illustrated through a more detailed examination of some of the major issues common to all countries of the area. These include the defence-industrial perspective, specific examinations of submarine and surface ship acquisition processes, and a review of the balance to be struck between naval and coastguard forces in the area. This book will be of much interest to students of naval power, maritime security, South-East Asian politics, strategic studies, and IR in general.

Advanced Transmission Electron Microscopy Jian Min Zuo, John C.H. Spence, 2016-10-26 This volume expands and updates the coverage in the authors' popular 1992 book, *Electron Microdiffraction*. As the title implies, the focus of the book has changed from electron microdiffraction and convergent beam electron diffraction to all forms of advanced transmission electron microscopy. Special attention is given to electron diffraction and imaging, including high-resolution TEM and STEM imaging, and the application of these methods to crystals, their defects, and nanostructures. The authoritative text summarizes and develops most of the useful knowledge which has been gained over the years from the study of the multiple electron scattering problem, the recent development of aberration correctors and their applications to materials structure characterization, as well as the authors' extensive teaching experience in these areas. *Advanced Transmission Electron Microscopy: Imaging and Diffraction in Nanoscience* is ideal for use as an advanced undergraduate or graduate level text in support of course materials in Materials Science, Physics or Chemistry departments.
