Critical Infrastructure Protection XVII Jason Staggs,Sujeet Shenoi,2024-01-29 The information infrastructure — comprising computers, embedded devices, networks and software systems — is vital to operations in every sector: chemicals, commercial facilities, communications, critical manufacturing, dams, defense industrial base, emergency services, energy, financial services, food and agriculture, government facilities, healthcare and public health, information technology, nuclear reactors, materials and waste, transportation systems, and water and wastewater systems. Global business and industry, governments, indeed society itself, cannot function if major components of the critical information infrastructure are degraded, disabled or destroyed. Critical Infrastructure Protection XVII describes

original research results and innovative applications in the interdisciplinary field of critical infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated, yet practical, solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. Areas of coverage include: Themes and Issues Smart Grid Risks and Impacts Network and Telecommunications Systems Security Infrastructure Security Automobile Security This book is the seventeenth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.10 on Critical Infrastructure Protection, an international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts focused on infrastructure protection.   The GENI Book Rick McGeer,Mark Berman,Chip Elliott,Robert Ricci,2016-08-31

This book, edited by four of the leaders of the National Science Foundation's Global Environment and Network Innovations (GENI) project, gives the reader a tour of the history, architecture, future, and applications of GENI. Built over the past decade by hundreds of leading computer scientists and engineers, GENI is a nationwide network used daily by thousands of computer scientists to explore the next Cloud and Internet and the applications and services they enable, which will transform our communities and our lives. Since by design it runs on existing computing and networking equipment and over the standard commodity Internet, it is poised for explosive growth and transformational impact over the next five years. Over 70 of the builders of GENI have contributed to present its development, architecture, and implementation, both as a standalone US project and as a federated peer with similar projects worldwide, forming the core of a worldwide network. Applications and services enabled by GENI, from smarter cities to intensive collaboration to immersive education, are discussed. The book also explores the concepts and technologies that transform the Internet from a shared transport network to a collection of "slices" -- private, on-the-fly application-specific nationwide networks with guarantees of privacy and responsiveness. The reader will learn the motivation for building GENI and the experience of its precursor infrastructures, the architecture and implementation of the GENI infrastructure, its deployment across the United States and worldwide, the new network applications and services enabled by

and running on the GENI infrastructure, and its international collaborations and extensions. This book is useful for academics in the networking and distributed systems areas, Chief Information Officers in the academic, private, and government sectors, and network and information architects.

THE CLOUD WATCHERS Mark Roland Langdale,2020-01-28 In the future, the world is in peril. Global warming has taken its toll, deforestation has wiped out too many forests and there's worse yet to come. Earth is on its last legs, and the Cloud Watchers of old have disappeared into legacy. Deep in the forest, two environmentally conscious runaways live off grid to do their bit to save the planet. Up in the clouds, the floating airship The Cloud Lab watches over the Earth as best they can. A steamship captain, an old Cloud Watcher, workers in Kew Gardens, and more all watch and wonder what will be the final straw that tips the Earth into chaos. When the Anti-Environmental League forms, an unexpected revolt sets events into motion that cannot be undone. Difficult challenges arise that might just be the planet's ultimate

downfall — unless the world's population can be roused to save itself.

  Analyzing Analytics Rajesh Bordawekar,Bob Blainey,Ruchir Puri,2015-10-30
This book aims to achieve the following goals: (1) to provide a high-level
survey of key analytics models and algorithms without going into mathematical
details; (2) to analyze the usage patterns of these models; and (3) to
discuss opportunities for accelerating analytics workloads using software,
hardware, and system approaches. The book first describes 14 key analytics
models (exemplars) that span data mining, machine learning, and data
management domains. For each analytics exemplar, we summarize its
computational and runtime patterns and apply the information to evaluate
parallelization and acceleration alternatives for that exemplar. Using case
studies from important application domains such as deep learning, text
analytics, and business intelligence (BI), we demonstrate how various
software and hardware acceleration strategies are implemented in practice.
This book is intended for both experienced professionals and students who are
interested in understanding core algorithms behind analytics workloads. It is
designed to serve as a guide for addressing various open problems in
accelerating analytics workloads, e.g., new architectural features for
supporting analytics workloads, impact on programming models and runtime
systems, and designing analytics systems.
