*Biochemistry of Beer Fermentation* Eduardo Pires,Tomáš Brányik,2015-02-09 Beer is the most popular alcoholic beverage in the world. Yet, behind each glass of beer there is an enormous amount of work invested. If the first image that comes to your mind is the lifting of heavy bags of malt or carrying kegs, guess again! Most of the work involved in brewing is carried out by “microworkers” – yeast and their enzymes! These special helpers are responsible for catalyzing the vast majority of the biochemical reactions occurring in all steps that gradually transform the sugary wort into beer. This book not only provides readers with an overview of the whole biochemical process involved in beer fermentation, but also reviews the latest findings in this delightful field, making it essential reading for both scientists and brewing enthusiasts

**Constructions of the Irish Child in the Independence Period, 1910-1940** Ciara Boylan,Ciara Gallagher,2018-09-21 This volume explores how Irish children were ‘constructed’ by various actors including the state, youth organisations, authors and publishers in the period before and after Ireland gained independence in 1922. It examines the broad variety of ways in which the Irish child was constructed through social and cultural activities like education, sport, youth organizations, and cultural production such as literature, toys, and clothes, covering themes ranging from gender, religion and social class, to the broader politics of identity, citizenship, and nation-building. A variety of ideals and ideologies, some of them conflicting, competed to inform how children were constructed by the adults who looked on them as embodying the future of the nation. Contributors ask fundamental questions about how children were constructed as part of the idealisation of the state before its formation, and the consolidation of the state after its foundation.

**Microbial Biotechnology** Alexander N. Glazer,Hiroshi Nikaido,2007-10-01 Knowledge in microbiology is growing exponentially through the determination of genomic sequences of hundreds of microorganisms and the invention of new technologies such as genomics, transcriptomics, and proteomics, to deal with this avalanche of information. These genomic data are now exploited in thousands of applications, ranging from those in medicine, agriculture, organic chemistry, public health, biomass conversion, to biomining. Microbial Biotechnology. Fundamentals of Applied Microbiology focuses on uses of major societal importance, enabling an in-depth analysis of these critically important applications. Some, such as wastewater treatment, have changed only modestly over time, others, such as directed molecular evolution, or 'green' chemistry, are as current as today's headlines. This fully revised second edition provides an exciting interdisciplinary journey through the rapidly changing landscape of discovery in microbial biotechnology. An ideal text for courses in applied microbiology and biotechnology courses, this book will also serve as an invaluable overview of recent advances in this field for professional life scientists and for the diverse community of other professionals with interests in biotechnology.

**A Sunday at the Pool in Kigali** Gil Courtemanche,2007-12-18 A Sunday at the Pool in Kigali is a moving, passionate love story set amid the turmoil and terror of Rwanda’s genocide. All manner of Kigali residents pass their time by the pool of the Mille-Collines hotel: aid workers, Rwandan bourgeoisie, expatriates, UN peacekeepers, prostitutes. Keeping a watchful eye is Bernard Valcourt, a jaded foreign journalist, but his closest attention is devoted to Gentile, a hotel waitress with the slender, elegant build of a Tutsi. As they slip into an intense, improbable affair, the delicately balanced world around them—already devastated by AIDS—erupts in a Hutu-led genocide against the Tutsi people. Valcourt’s efforts to spirit Gentile to safety end in their separation. It will be months before he learns of his lover’s shocking fate.

**Concrete Semantics** Tobias Nipkow,Gerwin Klein,2014-12-03 Part I of this book is a practical introduction to working with the Isabelle proof assistant. It teaches you how to write functional programs and inductive definitions and how to prove properties about them in Isabelle’s structured proof language. Part II is an introduction to the semantics of imperative languages with an emphasis on applications like compilers and program analysers. The distinguishing feature is that all the mathematics has been formalised in Isabelle and much of it is executable. Part I focusses on the details of proofs in Isabelle; Part II can be read even without familiarity with Isabelle’s proof language, all proofs are described in detail but informally. The book teaches the reader the art of precise logical reasoning and the practical use of a proof assistant as a surgical tool for formal proofs about computer science artefacts. In this sense it represents a formal approach to computer science, not just semantics. The Isabelle formalisation, including the proofs and accompanying slides, are freely available online, and the book is suitable for graduate students, advanced undergraduate students, and researchers in theoretical computer science and logic.

Democratic Biopolitics Prozorov Sergei Prozorov,2019-01-22 Sergei Prozorov challenges the assumption that the biopolitical governance means the end of democracy, arguing for a positive synthesis of biopolitics and democracy. By critically re-engaging with canonical theories of biopolitics from Foucault, Agamben and Esposito, and introducing Nancy, Badiou and Lefort to the discussion, he develops a vision of democratic biopolitics where diverse forms of life can coexist on the basis of their reciprocal recognition as free, equal and in common. He demonstrates how this vision can be realised and sustained by using examples of our lived experience.

**The Beach Caves** Trevor Shearston,2021-02-02 ‘Please. I’m in hell!’ The truth of that was in his face. The rims of his eyes were red-raw, his hair was matted, he hadn’t shaved since knocking at her door, when he’d been clean-shaven — one of the few details she remembered of that blurred encounter. ‘I know why you’re avoiding me. Whoever told the cops told you, too.’ It’s 1970, and young Annette Cooley is part of a small team working on an archaeological dig on the New South Wales south coast — a site that appears to prove that Aboriginal societies in the late Holocene were becoming less nomadic, even sedentary. The discovery is thrilling in its significance, and the atmosphere in the group is one of charged excitement. The team is led by a husband-and-wife pair, stars in their field, Aled Wray and Marilyn Herr, and working on their sites promises to be the making of Annette as an archaeologist. On a new site, linked to the first, Annette starts to fall for a fellow student, Brian Harpur. But there are strange tensions and a hidden darkness within the group. Then one of their party mysteriously disappears. When police arrive, Annette makes a decision that will irrevocably mark her life, and Brian Harpur’s. Written in clear, beautiful prose, and with great depth and moral complexity, The Beach Caves is a powerful story about jealousy, guilt, the choices we make, and the different paths our lives could have taken — shadow paths, which nevertheless leave a trace.

*Cancer Management in Man: Chemotherapy, Biological Therapy, Hyperthermia and Supporting Measures* Boris Minev,2013-02-27 This book represents a comprehensive description and evaluation of the most up-to-date approaches to cancer management. Each chapter, prepared by leading basic researchers and clinicians, provides an in depth description of a specific method for cancer management. The chemotherapy section of

the book is updated to include the newest drugs as well as those currently in development. Organized by drug class, this section provides the latest information on most drugs, including their mechanisms of action, interactions with other agents, toxicities, side effects, and mechanisms of resistance. The biological therapy section of the book provides expanded coverage of the currently used cytokines, vaccines, and cell based therapies of cancer. Full consideration is also given to other modern treatment approaches, such as tyrosine kinase inhibitors, inhibitors of tumor angiogenesis, and the transcatheter management of cancer. Current advances in hyperthermia in cancer treatment, hematologic and nutritional support, bone marrow transplantation, pain management and care of the terminally ill patients with cancer are also presented. In summary, this book provides a comprehensive coverage of the current knowledge on the most innovative, systematic and multidisciplinary approaches to the treatment of patients with cancer.

*Modeling Companion for Software Practitioners* Egon Börger,Alexander Raschke,2018-03-31 This book uses a variety of applications to illustrate a modeling method that helps practitioners to manage complex software-intensive systems. The proposed method relies on the combination of its abstraction concept and its operational character, with behavioral models in the precise and simple form of Abstract State Machines (ASMs). The book introduces both the modeling method (Part I) and the available tool support (Part II): In Part I the authors detail (using numerous examples) how to construct, explain, debug, explore, extend and reuse accurate system design models, starting from scratch. Only an elementary knowledge of common mathematical (including set-theoretic) notation and some basic experience with computational processes (systems, programs, algorithms) is assumed. Part II then shows how the modeling method can be supported by implementing tools that make design models executable and debuggable. To illustrate how to build, debug and maintain systems and to explain their construction in a checkable manner, a general, problem-oriented refinement method is adopted to construct system models from components. The method starts with abstract models and refines them step by step, incrementally adding further details that eventually lead to code. Intended for practitioners who build software intensive systems, and students specializing in software engineering, it can be used both for self-study and for teaching, and it can serve as a reference book. Exercises are included to help readers check their understanding of the explained concepts. For many models defined in the book, refinements to executable versions can be downloaded for experimental validation from the book's website at <http://modelingbook.informatik.uni-ulm.de>

**The Price of Two Sparrows** Christy Collins,2021-01-27 Heico is an ornithologist fighting a losing battle to protect the birds in his beachside suburb. When a journalist asks for comment on a planned development, Heico exaggerates his reports on how many migratory birds use the site. Soon it is revealed that the proposed building is a mosque, and he finds himself embroiled in community resistance to the project. Still, he refuses to back down. As the delayed mosque project becomes a focal point for growing Islamophobia, Heico must confront his own ghosts, and the prejudices he insists he doesn't have. Nahla is Heico's house cleaner. Having recently arrived in Australia she is trying to find her place in a new country and a new marriage. Isolated and lonely, she sees the mosque as a symbol of what she hopes to find in Australia: community, familiarity, acceptance. But as resistance to the project intensifies, she must summon the courage and the language to speak out and claim her space in this new life. The Price of Two Sparrows explores what we hold sacred and why. It delicately picks apart questions of community and prejudice, religion and nature in the modern world. This is a beautiful and thought-provoking debut from an exceptional new Australian writer.
