Chemical Ecology Anne-Geneviève Bagnères, Martine Hossaert-McKey, 2016-08-29 The book features comparative perspectives on the field of chemical ecology, present and future, offered by scientists from a wide variety of disciplines. The scientists contributing to this book –biologists, ecologists, biochemists, chemists, biostatisticians – are interested in marine, freshwater and terrestrial ecosystems and work on life forms ranging from micro-organisms to mammals, including humans, living in areas from the tropics to polar regions. Here, they cross their analyses of the present state of chemical ecology and its perspectives for the future. Those presented here include complex, multispecies communities and cover a wide range both of organisms and of the types of molecules that mediate the interactions between them. Up to now, no book has presented a solid scientific treatment of a wide range of examples. This book illustrates a diverse panel of the most advanced aspects of this rapidly expanding field.

Training for Leadership Geert Bouckaert, Michel S. de Vries, 2013-10-01 If the needs for training for leadership are recognized as urgent, we need to ask whether the training institutes are doing the right things and question the effectiveness of training institutions. This book calls for a serious and critical reflection on the way in which we conceptualize training for leadership in the second decade of the 21st century. The different chapters reflect the ideas, theories and practices being dominant today. The thread of the contents show that something is amiss in such training. In general it does not have the expected effects and it often does not address the needs of recipients. The implication is that training for leadership in the future has to be redefined taking into account the specific contingencies, problems and complexities, leaders – especially in developing countries – have to deal with. Leadership cannot be seen as an isolated factor. The different chapters in this book argue that training for effective leadership and good governance practices need to be combined. All ask for leadership that is less hierarchical and more interactive, collaborative, and takes also stakeholders outside the public sector seriously. This has serious implications for the question how leadership training is organized ; the different chapters of this volume address this issue from a theoretical as well as an empirical point of view : developments in theorizing about leadership, styles of public sector leadership, leadership in turbulent times and the importance of contingences on leadership in changing times.

Fundamentals of Heat Exchanger Design Shudhkar Mishra, 2015-08 Heat exchanger has increased immensely from the viewpoint of energy conservation,

conversion, recovery, and successful implementation of new energy sources. Its importance is also increasing from the stand-point of environmental concerns such as thermal pollution, air pollution, water pollution, and waste disposal. Heat exchangers are used in the process, power, transportation, air-conditioning and refrigeration, cryogenic, heat recovery; alternate fuels, and manufacturing industries, as well as being key components of many industrial products available in the marketplace. The heat exchanger design equation can be used to calculate the required heat transfer surface area for a variety of specified fluids, inlet and outlet temperatures and types and configurations of heat exchangers, including counterflow or parallel flow. A value is needed for the overall heat transfer coefficient for the given heat exchanger, fluids, and temperatures. Heat exchanger calculations could be made for the required heat transfer area, or the rate of heat transfer for a heat exchanger of given area.
