Critical Technology Graeme Kirkpatrick,2017-11-28 Have we resigned ourselves to a cyber-future that has been decided behind our backs? Why is technology - and our understanding of it - central to the concerns of critical social theory? In developing the PC technologists have borrowed ideas from the human sciences about what people are like, about the nature of meaning and the desirability of some experiences over others. Yet, to date, the academic disciplines most concerned with these ideas have offered neither resistance nor debate. In this book, Graeme Kirkpatrick shows why it is crucial that we initiate that debate. Offering a revealing critique of PC design and the social assumptions that underlie it, Kirkpatrick argues that it relies on a particular conception of a capitalistic society that expects its technology to come pre-packaged, mass-marketed and user-friendly. Anyone who is critical of such a society and its commodification of human achievement should, he suggests, be suspicious. Kirkpatrick argues that the computer is a contested space within which major social conflicts are played out. On the one hand, there is a narrative of flexibility and human empowerment, and on the other a sense of a system that controls our lives, leaving us in thrall to the computer corporations, and at constant risk from phishers and hackers. The outcomes of these conflicts are extremely important as they will shape our future experience of technology, society and politics. Critical Technology is a lively, provocative and often radical book, which forces us to reflect on the meaning of an artefact that is central to our daily lives, yet that we too often take for granted.

Information and Communication Technologies for Women's Socioeconomic Empowerment Samia Melhem,Claudia Morrell,Nidhi Tandon,2009-10-02 This paper reviews how women in the developing world access and use information and communication technology (ICT). It examines the discourse and controversies surrounding the digital gender divide, including links to poverty and illiteracy. Major themes concerning women and ICTs are explored, such as women in the ICT workforce, how girls and women relate differently to ICT, and opportunities and barriers for women in science and technology in general. Current research relating to gender and ICT is often country-specific and is more prevalent in developed countries than in developing countries. This paper suggests where additional research is needed on barriers to women s entry and access to ICT. The overall objective of this paper is to influence policy dialogue around women and ICT for development by raising awareness of the digital gender divide. Economic opportunity for women in ICT will not be realized until policies address gender considerations and ensure that ICT investment contributes to more sustainable and equitable development.

Coding Democracy Maureen Webb,2021-07-27 Hackers as vital disruptors, inspiring a new wave of activism in which ordinary citizens take back democracy. Hackers have a bad reputation, as shady deployers of bots and destroyers of infrastructure. In Coding Democracy, Maureen Webb offers another view. Hackers, she argues, can be vital disruptors. Hacking is becoming a practice, an ethos, and a metaphor for a new wave of activism in which ordinary citizens are inventing new forms of distributed, decentralized democracy for a digital era. Confronted with concentrations of power, mass surveillance, and authoritarianism enabled by new technology, the hacking movement is trying to build out democracy into cyberspace.

Communities and Networks Katherine Giuffre,2013-04-12 In Communities and Networks, Katherine Giuffre takes the science of social network analysis and applies it to key issues of living in communities, especially in urban areas, exploring questions such as: How do communities shape our lives and identities? How do they foster either conformity or innovation? What holds communities together and what happens when they fragment or fall apart? How is community life changing in response to technological advances? Refreshingly accessible and built on fascinating case examples, this unique book provides not only the theoretical grounding necessary to understand how and why the burgeoning area of social network analysis can be useful in studying communities, but also clear technical explanations of the tools of network analysis and how to gather and analyze real-world network data. Network analysis allows us to see community life in a new perspective, with sometimes surprising results and insights, and this book enables readers to gain a deeper understanding of social life and the relationships that build (and break) communities. This engaging text will be an exciting new resource for upper-level undergraduate and beginning graduate students in a wide range of courses including social network analysis, community studies, urban studies, organizational studies, and quantitative methods.

History of Nordic Computing Janis Bubenko,John Impagliazzo,Arne Soelvberg,2005-01-14 Computing in the Nordic countries started in late 1940s mainly as an engineering activity to build computing devices to perform mathematical calculations and assist mathematicians and engineers in scientific problem solving. The early computers of the Nordic countries emerged during the 1950s and had names like BARK, BESK, DASK, SMIL, SARA, ESKO, and NUSSE. Each of them became a nucleus in institutes and centres for mathematical computations programmed and used by highly qualified professionals. However, one should not forget the punched-card machine technology at this time that had existed for several decades. In addition, we have a Nordic name, namely Frederik Rosing Bull, contributing to the fundaments of punched card technology and forming the French company Bull. Commercial products such as FACIT EDB and SAAB D20-series computers in Sweden, the Danish GIER computer, the Nokia MIKKO computer in Finland, as well as the computers of Norsk Data in Norway followed the early computers. In many cases, however, companies and institutions did not further develop or exploit Nordic computing hardware, even though it exhibited technical advantages. Consequently, in the 1970s, US computers, primarily from IBM, flooded the Nordic market.

Handbook of Discourse Processes Arthur C. Graesser,Morton Ann Gernsbacher,Susan R. Goldman,2003-04-02 This Handbook is a comprehensive overview of the multidisciplinary field of discourse processes. The editors hope to foster a more interdisciplinary approach to discourse processing with this Handbook, while simultaneously developing an appreciation within the field for multiple methods of establishing rigorous scientific claims. The field of discourse processes is currently fueled by seven dominant approaches: * discourse psychology; * corpus analysis; * computational discourse; * discourse technologies; * conversation analysis; * hybrid qualitative and quantitative approaches; and * cultural foundations. The contributors also discuss future trends in research, including corpus analyses, the integration of neuroscience with discourse research, and the development of more advanced computer technologies for analyzing discourse.
