Last Train to Hilversum Charlie Connelly, 2019-01-24 Despite the all-pervading influence of television ninety per cent of people in Britain still listen to the radio, clocking up over a billion hours of listening between us every week. It's a background to all our lives: we wake up to our clock radios, we have the radio on in the kitchen as we make the tea, it's on at our workplaces and in our cars. From Listen With Mother to the illicit thrill of tuning into pirate stations like Radio Caroline; from receiving a musical education from John Peel or having our imagination unlocked by Douglas Adams' *The Hitchhiker's Guide to the Galaxy*; from school-free summers played out against a soundtrack of Radio One and Test Match Special to more grown-up soundtracks of the Today programme on Radio 4 and the solemn, rhythmic intonation of the shipping forecast – in many ways, our lives can be measured in kilohertz. Yet radio is changing because the way we listen to the radio is changing. Last year the number of digital listeners at home exceeded the number of analogue listeners for the first time, meaning the pop and crackle and the age of stumbling upon something by chance is coming to an end. There will soon be no dial to turn, no in-between spaces on the waveband for washes of static, mysterious beeps and faint, distant voices. The mystery will be gone: we'll always know exactly what it is we're listening to, whether it's via scrolling LCD on our digital radios, the box at the bottom of our TV screen or because we've gone in search of a particular streaming station. And so, as the world of analogue listening fades, Charlie Connelly takes stock of the history of radio and its place in our lives as one of the very few genuinely shared national

experiences. He explores its geniuses, crackpots and charlatans who got us to where we are today, and remembers its voices, personalities and programmes that helped to form who we are as individuals and as a nation. He visits the key radio locations from history, and looks at its vital role over the past century on both national and local levels. Part nostalgic eulogy, part social history, part travelogue, *Last Train To Hilversum* is Connelly's love letter to radio, exploring our relationship with the medium from its earliest days to the present in an attempt to recreate and revisit the world he entered on his childhood evenings on the dial as he set out on the radio journey of a lifetime.

Radio Adventures of the Mv Communicator MR Paul Alexander Rusling, 2016-08-29 A factual story about the life of a radio broadcasting ship, the MV Communicator which was home to eleven radio stations during her 21 year career. This rivetting tale covers the drama and success of the stations, whose staff included many well-known radio names in the UK and in the Netherlands. During that time she attracted up to ten million listeners with her powerful AM (Medium Wave) transmissions. Her owners made over \$15 million during the period, but had to endure a government blockade, threats, takeovers by fraudsters and swindlers, boarding parties and arrests of the ship by the Admiralty Marshall acting for unpaid creditors. After being towed away she caught the attention of convicted mercenaries and the Dutch secret service which resulted in her being raided by the Portuguese Government; just a few of the stages in her fun-filled, action packed voyages. This a thrilling story that will please the thousands of radio aficionados who still relish those buccaneering days. Many of her listeners were oblivious to the drama behind the scenes, hearing only the rock'n'roll music that the Communicator's radio stations churned out around the clock, audible over half of Western Europe. Written by an experienced engineer and broadcaster who advised on equipping the ship, the book brings together the experiences and tales of many of

the Communicator's former crewmembers and disc jockey teams. All for those two most powerful elixirs - money and music.

Wireless Radio Lewis Coe, 2015-07-25 In 1873 Scottish physicist James Clerk Maxwell first advanced the idea that there might be electromagnetic waves that were similar to light waves, a startling concept to the scientists of his day. About 13 years later, German physicist Heinrich Hertz demonstrated in his laboratory that electromagnetic radiation did indeed exist. But it was not until after Hertz's death that a young Italian named Guglielmo Marconi got the idea for a practical communications system based on Hertz's work. Marconi was surprised and disappointed that the Italian government was not interested in his newly discovered wireless communications system, and thus he took his equipment to England. From that point on, the wireless became identified with Britain. From these beginnings, wireless radio became the basis of a revolution that has resulted in the satellite communications of today. This history first looks at Marconi's invention and then explores its many applications, including marine radio, cellular telephones, police and military uses, television and radar. Radio collecting is also discussed, and brief biographies are provided for the major figures in the development and use of the wireless.

Attention All Shipping Charlie Connelly, 2011-06-02 This solemn, rhythmic intonation of the shipping forecast on BBC radio is as familiar as the sound of Big Ben chiming the hour. Since its first broadcast in the 1920s it has inspired poems, songs and novels in addition to its intended objective of warning generations of seafarers of impending storms and gales. Sitting at home listening to the shipping forecast can be a cosily reassuring experience. There's no danger of a westerly gale eight, veering southwesterly increasing nine later (visibility poor) gusting through your average suburban living room, blowing the Sunday papers all over the place and startling the cat. Yet familiar though the sea areas are by name, few people give much thought to where they are or what they contain. In ATTENTION ALL SHIPPING Charlie Connelly wittily explores the places behind the voice, those mysterious regions whose names seem often to bear no relation to conventional geography.
