Drupal for Humanists Quinn Dombrowski,2016-11-02 Drupal is a free and open-source content management framework. It is, like many web platforms, the “backbone” behind a website, invisible to front-end users but critical to the foundation, organization, and presentation of content. As more scholars and students seek to make their research available online—using the power of the web to find newer and richer ways of presenting large data sets—they are increasingly reaching the limits of what “old” platforms can accomplish. Author Quinn Dombrowski has taught numerous courses in Drupal programming for scholars in the humanities; the techniques here have been field tested. The majority of this book is centered around the creation of an example website, based on a fully functional website that is driven by Drupal. Drupal for Humanists is the first book on Drupal to be crafted

specifically for non-technical users. This manual does not assume any prior experience with PHP, FTP, databases, CMS, or even HTML. If these acronyms are unfamiliar, Drupal for Humanists is the place to start.

Economy, Society and Public Policy The Core Team, 2019 Economy, Society, and Public Policy is a new way to learn economics. It is designed specifically for students studying social sciences, public policy, business studies, engineering and other disciplines who want to understand how the economy works and how it can be made to work better. Topical policy problems are used to motivate learning of key concepts and methods of economics. It engages, challenges and empowers students, and will provide them with the tools to articulate reasoned views on pressing policy problems. This project is the result of a worldwide collaboration between researchers, educators, and students who are committed to bringing the socially relevant insights of economics to a broader audience. KEY FEATURES ESPP does not teach microeconomics as a body of knowledge separate from macroeconomics Students begin their study of economics by understanding that the economy is situated within society and the biosphere Students study problems of identifying causation, not just correlation, through the use of natural experiments, lab experiments, and other quantitative methods Social interactions, modelled using simple game theory, and incomplete information, modelled using a series of principal-agent problems, are introduced from the beginning. As a result, phenomena studied by the other social sciences such as social norms and the exercise of power play a role The insights of diverse schools of thought, from Marx and the classical economists to Hayek and Schumpeter, play an integral part in the book The way economists think about public policy is central to ESPP. This is introduced in Units 2 and 3, rather than later in the course.
