Automation Based Creative Design – Research and Perspectives A. Tzonis,I. White,2012-12-02
Computer technology has revolutionized many aspects of building design, such as drafting,
management, construction - even building with robots. This revolution has expanded into the field of
design creativity. Presented in this book is an up-to-date, comprehensive picture of research advances
in the fast-growing field of informatics applied to conceptual stages in the generation of artifacts - in
particular, buildings. It addresses the question how far and in what ways creative design can be
intelligently automated. Among the topics covered are: the use of precedents; the relations between
case-based, rule-based, and principle-based architectural design reasoning; product typology; artifact
thesauruses; the inputting and retrieval of architectural knowledge; the visual representation and
understanding of existing or projected built forms; empirical and analytical models of the design
process and the design product; desktop design toolkits; grammars of shape and of function; multiple-
perspective building data structures; design as a multi-agent collaborative process; the integration of
heterogeneous engineering information; and foundations for a systematic approach to the development

of knowledge-based design systems. The papers provide a link between basic and practical issues: - fundamental questions in the theory of artifact design, artifical intelligence, and the cognitive science of imagination and reasoning; - problems in the computerization of building data and design facilities; - the practical tasks of building conception, construction and evaluation. The automation of creative design is itself considered as an engineering design problem. The implications of current and future work for architectural education and research in architectural history, as well as for computer-integrated construction and the management of engineering projects are considered.

Creative Technologies for Multidisciplinary Applications Connor, Andy M.,2016-03-29 Given that institutions of higher education have a predisposition to compartmentalize and delineate areas of study, creative technology may seem oxymoronic. On the contrary, the very basis of western thought is found in the idea of transcendent knowledge. The marriage of opposing disciplines therefore acts as

a more holistic approach to education. Creative Technologies for Multidisciplinary Applications acts as an inspiration to educators and researchers who wish to participate in the future of such multidisciplinary disciplines. Because creative technology encompasses many applications with the realm of art, gaming, the humanities, and digitization, this book features a diverse collection of relevant research for the modern world. It is a pivotal reference publication for educators, students, and researchers in fields related to sociology, technology, and the humanities.
