*Constructing and Applying Objective Functions* Andranik S. Tangian, Josef Gruber, 2012-12-06 For some seven decades, econometrics has been almost exclusively dealing with constructing and applying econometric equation systems, which constitute constraints in econometric optimization models. The second major component, the scalarvalued objective function, has only in recent years attracted more attention and some progress has been made. This book is devoted to theories, models and methods for constructing scalarvalued objective functions for econometric optimization models, to their applications, and to some related topics like historical issues about pioneering contributions by Ragnar Frisch and Jan Tinbergen.

Case Studies in Innovation for Researchers, Teachers and Students Heather Fulford,2012 Many would say that innovation is a major driving force in our economy but they would be wrong. Innovation has driven life on earth for about 4 billion years. Thus there is no reason to wonder why it is so very important in all aspects of our lives. As academics we are interested in studying innovation from many different perspectives. But the subject is not only of interest to academics. Both industry and government can obtain distinct advantage from innovation. There is also the public services sector and the NGOs as well. It is essential to remember that innovation is not a solitary activity: it is intensely based on relationships which are a key to its success. Heather Fulford is a leading authority on innovation and she has selected 10 important pieces of research which she believes will be of use to all interested readers. The ten cases and research studies presented in this volume serve to illustrate the reach and scope of innovation. Readers, researchers, teachers and students will find this book very rewarding.

Díaz López, Massimiliano Mazzanti, Roberto Zoboli, 2023-10-06 Through careful investigation into the role of eco-innovation as a catalysing factor in the societal transition towards sustainability, this Handbook proposes more appropriate measures of innovation as a driver of change. It examines innovation from various perspectives, including labour, trade, the circular economy and energy, to illustrate a more comprehensive picture of its impacts.

**Business Innovation and ICT Strategies** Sriram Birudavolu, Biswajit Nag, 2018-11-13 This book investigates the real process of unleashing the power of Information and Communications Technology (ICT) through Open Innovation and strategic choices. It covers the most important aspects of ICT in a nutshell

and details the road to the future through business innovation. ICT, of which telecom and IT constitute the core, is currently permeating and transforming every sphere of life, ranging from commerce, manufacturing, education and healthcare, to agriculture, banking, governance, media and entertainment. Today, telecommunication and ICT, in general, are essential to a country's economic development and competitiveness as recognized both by the World Bank and the Asian Development Bank. Due to the powerful, disruptive and rapid forces unleashed by ICT tsunami, organisations not only struggle to harness the potential of ICT but can also be overwhelmed by the changes, complexity, competition and regulatory environment it brings up. This book provides a clue to organisations on how to sustain and succeed by leveraging ICT in absence of extensive in-house expertise across the breadth and depth of these areas. The driving theme of the book is about opening up organizational and business models, by presenting an integrated roadmap to a future with ICT, by co-opting, cooperating and competing with other organisations. Constructing the right strategy and building the necessary social capital for open innovation through collaboration with partners, government, academia and users (Quadruple Helix Model) are essential steps in such a process.

Achieving Science with CubeSats National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Achieving Science Goals with CubeSats, 2016-11-06 Space-based observations have transformed our understanding of Earth, its environment, the solar system and the universe at large. During past decades, driven by increasingly advanced science questions, space observatories have become more sophisticated and more complex, with costs often growing to billions of dollars. Although these kinds of ever-more-sophisticated missions will continue into the future, small satellites, ranging in mass between 500 kg to 0.1 kg, are gaining momentum as an additional means to address targeted science questions in a rapid, and possibly more affordable, manner. Within the category of small satellites, CubeSats have emerged as a space-platform defined in terms of (10 cm x 10 cm)- sized cubic units of approximately 1.3 kg each called U's. Historically, CubeSats were developed as training projects to expose students to the challenges of real-world engineering practices and system design. Yet, their use has rapidly spread within academia, industry, and government agencies both nationally and internationally. In particular, CubeSats have caught the attention of parts of the U.S. space science community, which sees this platform, despite its inherent constraints, as a way to affordably access space and perform unique measurements of scientific value. The first science results from such CubeSats have only recently become available; however, questions remain regarding the scientific potential and technological promise of CubeSats in the future. Achieving Science with CubeSats reviews the current state of the scientific potential and technological promise of CubeSats. This report focuses on the platform's promise to obtain high- priority science data, as defined in recent decadal surveys in astronomy and astrophysics, Earth science and applications from space, planetary CubeSats to advance biology and microgravity research. It provides a list of sample science goals for CubeSats, many of which address targeted science, often in coordination with other spacecraft, or use sacrificial, or high-risk, orbits that lead to the demise of the satellite after critical data have been collected. Other goals relate to the use of CubeSats as constellations or swarms deploying tens to hundreds of CubeSats that function as one distributed array of measurements.

Innovation Intermediaries and (Final) Frontiers of High-tech Matjaz Vidmar,2020-12-17 This book synthesizes the critical advances in holistic understanding of innovation intermediation. It aims to enable researchers, policy-makers, analysts and practitioners to understand and exploit the best practice in designing and deploying interventions in support of an emergent high-tech geographically-bound sectoral innovation system. The book presents a systematic review of innovation intermediaries' literature and mixed-methods empirical evidence across a range of projects, building a new comprehensive model of activities and resources deployed. The book highlights the emerging New Space industry in Scotland as a primary case study, but lessons learned can applied to scholarly analysis, policy and operational design of all innovation intermediaries' interventions, which makes this book essential reading in management, innovation studies, political studies and sociology of technology.

Elgar Encyclopedia on the Economics of Knowledge and Innovation Antonelli, Cristiano,2022-10-14 A landmark reference work in the field, this Elgar Encyclopedia presents over 60 entries from scholars that have shaped the making of the economics of innovation as a distinct and specialised field of investigation within the broad range of economic disciplines. This will be a critical read for economics scholars, particularly those focusing on knowledge and innovation as it offers an understanding of the definitions of key terms in the field, the founding tenets of the topic, and the economics of knowledge and innovation in more specific contexts.

Technological, Managerial and Organizational Core Competencies: Dynamic Innovation and Sustainable Development Nobre, Farley Simon, 2011-09-30 Innovation involves a set of processes which support the production and transformation of knowledge into new processes, technologies and products, goods and services, and provide an organization with particular strengths and value relative to other firms. In such a view, innovation is a key source of customer benefits and sustainable competitive advantage. Technological, Managerial and Organizational Core Competencies: Dynamic Innovation and Sustainable Development investigates the impact of knowledge management, information systems, finance, organizational networks, internationalization, strategic management, marketing, entrepreneurship, and sustainability on an organization that pursues dynamic innovation and sustainable advantage. This book provides research and practice for graduate and undergraduate programs, as well as business firms with different technological, managerial, and organizational perspectives. Further Description from the Editors: This book represents the culmination of an international project to compile inter-disciplinary research that most contributes to innovation. More specifically, this book is about innovation in firms, industries, nations and society. It speaks to professionals and researchers who want to improve their understanding of dynamic innovation and sustainable development. The Editors' goal is to foster cross-pollination among researchers. To this aim, the Editors have selected and assembled 35 chapters that illustrate multidisciplinary theoretical perspectives and empiric results on innovation and the roles of Sustainability, Organizational Networks, Entrepreneurship, Knowledge Management, R&D&T (Research, Development and Technology) Management, Marketing, Finance, Internationalization, and Information Systems in the organization that pursues dynamic innovation and sustainable development. Innovation involves processes, organization knowledge into new knowledge, processes, structures, technologies and products, goods and services. At the firm and industry levels of analysis, innovation can provide organizations with strengths relative to other firms, clusters, and nations and it is a key source of customer benefits and sustainable development. At the collective and societal levels of analysis, innovation can provide humanity with economic, social and environmental wealth through sustainable development. The uniqueness of this book lies in the participants' efforts to identify Organizations' Creative Areas (OCA) that can provide core competencies for the organization in pursuit of dynamic innovation and sustainable development. In this perspective, innovation is a dynamic system and it is contingent upon a set of core competencies that couple to each other. Therefore, changing of even one competence can affect the organization's ability to innovate. The book avoids the term competitive advantage and adopts a more fruitful perspective of sustainable development – "the process of achieving human development ... in an inclusive, connected, equitable, prudent, and secure manner". An inclusive perspective sees traditional competitive advantage as occupying one extreme, whereas truly sustainable development occupies the opposite extreme. Sustainable development must benefit not only the organization and its customers, but also the whole society and the future of humanity through sustainability. Most chapters of this book fall between these extremes.

Innovation for Sustainability Nancy Bocken, Paavo Ritala, Laura Albareda, Robert Verburg, 2019-02-22 The aim of this edited book is to provide a comprehensive overview of the opportunities and challenges related to innovation for sustainability. Combining work from both emerging and established scholars in different academic fields, this book provides an integrated understanding of the topic from four perspectives. First, the big picture: frameworks, types, and drivers; second, strategy and leadership; third, measurement and assessment and fourth, tools, methods and technologies. Chapter 11 of this book is available open access under a CC BY 4.0 license at link.springer.com. The editors donate their remuneration for this book to conservation organisation the WWF.

*Knowledge, Innovation and Sustainable Development in Organizations* Marta Peris-Ortiz,João J. Ferreira,Jose M. Merigó Lindahl,2018-07-16 This volume explores the ways in which knowledge and innovation impact business and economic sustainability, offering a wide-ranging and richly illustrated study of knowledge, innovation and sustainability of organizations from a dynamic capabilities perspective. In organizational theory, dynamic capability is defined as an organization's ability to react and adapt adequately and rapidly to external change. In today's global economy, pursuing sustainable strategies and practices is critical to organizational success. Complying with externally and internally imposed sustainability targets might initially appear as a restriction for organizations; however, they can be transformed into a new set of opportunities. This means that the classic ways in which management absorbs the experiences associated with evolving conditions, organizational frameworks and markets must be reconsidered in light of the preservation of the technological, environmental and social ecosystems. Featuring research and case studies from sectors such as NGOs, SMEs, education and agriculture, this book offers students, academics, practitioners and policymakers a multi-faceted understanding of how and why knowledge, innovation and sustainability are intricately linked—and offers insight into best practices that balance organizational and societal needs.
