*The Oxford Handbook of Comparative Cognition* Thomas R. Zentall, Edward A. Wasserman, 2012-03-20 In the past decade, the field of comparative cognition has grown and thrived. No less rigorous than purely behavioristic investigations, examinations of animal intelligence are useful for scientists and psychologists alike in their quest to understand the nature and mechanisms of intelligence. Extensive field research of various species has yielded exciting new areas of research, integrating findings from psychology, behavioral ecology, and ethology in a unique and wide-ranging synthesis of theory and research on animal cognition. The Oxford Handbook of Comparative Cognition contains sections on perception and illusion, attention and search, memory processes, spatial cognition, conceptualization and categorization, problem solving and behavioral flexibility, and social cognition processes including findings in primate tool usage, pattern learning, and counting. The authors have incorporated findings and theoretical approaches that reflect the current state of the field. This comprehensive volume will be a must-read for students and scientists who want to know about the state of the art of the modern science of comparative cognition.

**Oxford Textbook of Children's Sport and Exercise Medicine** Neil Armstrong, Willem Van Mechelen, 2023 The 4th edition of the Oxford Textbook of Children's Sport and Exercise Medicine is the definitive single-volume reference in the field presented in four sections Exercise Science; Exercise Medicine; Sport Science; and Sport Medicine.

*Residue Reviews* Francis A. Gunther, 2012-12-06 Worldwide concern in scientific, industrial, and governmental communities over traces of toxic chemicals in foodstuffs and in both abiotic and biotic environments has justified the present triumvirate of specialized publications in this field: comprehensive reviews, rapidly published progress reports, and archival documentations. These three publications are integrated and scheduled to provide in international communication the coherency essential for nonduplicative and current progress in a field as dynamic and complex as environmental contamination and toxicology. Until now there has been no journal or other publication series reserved exclusively for the diversified literature on «toxic chemicals in our foods, our feeds, our geographical surroundings, our domestic animals, our wild life, and ourselves. Around the world immense efforts and many talents have been mobilized to technical and other evaluations of natures, locales, magnitudes, . fates, and toxicology of the persisting residues of these chemicals loosed upon the world. Among the sequelae of this broad new emphasis has been an inescapable need for an articulated set of authoritative publications where one could expect to find the latest important world literature produced by this emerging area of science together with documentation of pertinent ancillary legislation.

Aerosol Effects on Climate S. G. Jennings, 1993-01-01 There is now a growing awareness that, in addition to the well publicized influence of carbon dioxide and other greenhouse gases on the warming of the earth's atmosphere, aerosol particles may also play an important role in forcing climate change. This volume brings together previously unavailable data and interpretative analyses, derived from studies in both the U.S. and U.S.S.R., which review, update, and assess aerosol-related climatic effects.

**Biology and Pathogenesis of Rhabdo- and Filoviruses** Asit K Pattnaik, Michael A Whitt, 2014-12-30 Rhabdoviruses and Filoviruses are single-stranded, non-segmented, negative-strand RNA viruses, many of which cause significant morbidity and mortality in humans and animals. Certain members of these virus families have been used as excellent model systems to understand the molecular biology of replication, host responses to infections, and viral countermeasures. Rhabdoviruses have also been used as vaccine vectors as well as oncolytic agents. Studies on Filoviruses have now provided significant insights into how they enter susceptible cells, replicate and cause disease, and also how they evade the host's immune mechanisms. This book addresses the most recent findings on Rhabdovirus and Filovirus structure, replication mechanisms, host cell responses to virus infections and viral countermeasures. Chapters on emerging viruses as well as approaches for therapeutic interventions have also been

included. This book represents an authoritative text that brings together the most recent advances on the cellular and molecular biology of Rhabdo- and Filoviruses, including mechanisms of pathogenesis. Contents: Overview of Rhabdo- and Filoviruses (Asit K Pattnaik and Michael A Whitt) Rhabdovirus Structure (Ming Luo) The Pathway of VSV Entry into Cells (Shem Johnson and Jean Gruenberg) Rhabdovirus Glycoproteins (Yves Gaudin and Michael A Whitt) VSV RNA Transcription and Replication (Jacques Perrault) Host Cell Functions in Vesicular Stomatitis Virus Replication (Phat X Dinh, Anshuman Das, and Asit K Pattnaik) Cytopathogenesis of Rhabdoviruses (Douglas S Lyles) Assembly and Budding of Rhabdo- and Filoviruses (Ziying Han and Ronald N Harty) Rhabdoviruses as Vaccine Vectors: From Initial Development to Clinical Trials (John K Rose and David K Clarke) Oncolytic Rhabdoviruses (Nicole E Forbes and John C Bell) Use of Rhabdoviruses to Study Neural Circuitry (Melanie Ginger, Guillaume Bony, Matthias Haberl, and Andreas Frick) Evolution of Rhabdo- and Filoviruses (Isabel S Novella, John B Presloid, and R Travis Taylor) Emerging Rhabdoviruses (Imke Steffen and Graham Simmons) Rabies Virus Replication and Pathogenesis (Andrew W Hudacek and Matthias J Schnell) Activation and Evasion of Innate Immune Response by Rhabdoviruses (Karl-Klaus Conzelmann) Rabies Virus Vaccines (Ying Huang, Clement W Gnanadurai, and Zhen F Fu) Filovirus Structure and Morphogenesis (Timothy F Booth, Daniel R Beniac, Melissa J Rabb, and Lindsey L Lamboo) Epidemiology and Pathogenesis of Filovirus Infections (Logan Banadyga and Hideki Ebihara) Filovirus Entry into Susceptible Cells (Rohit K Jangra, Eva Mittler, and Kartik Chandran) Filovirus Transcription & Replication (Kristina Brauburger, Laure R Deflubé, and Elke Muhlberger) Innate Immune Evasion Mechanisms of Filoviruses (Christopher F Basler, Gaya K Amarasinghe, and Daisy W Leung) Vaccines and Antivirals for Filoviruses (Chad E Mire and Thomas W Geisbe) Readership: Investigators, graduate students, and post-graduate researchers in the field of RNA virology. Key Features: The book describes the most recent advances in our understanding of cellular and molecular aspects of replication and pathogenic mechanisms of these two important viral pathogens. Unlike other existing textbooks published earlier, this book brings together several major topics of research such as replication, host response to viral replication and viral countermeasures, viral evolution and emerging viruses, viral vectors, vaccines and antivirals, etc. The chapters in the book are written by renowned researchers in these fields. **The Social Benefits of Education** Jere R. Behrman, Nevzer Stacey, 2010-08-04 For decades, the primary argument in justifying education has been based on its direct economic effects. Yet education also provides social benefits for individuals and society at large, including a better way of taking care of ourselves, and consequently creating a better society to live in. Though it is difficult to quantify these social benefits, a more systematic analysis would improve our understanding of the full effects of education and provide a basis for considering related policies. The Office of Research of the United States Department of Education commissioned a series of papers on measuring these effects of education. Those papers, revised and updated, are collected here. Kenneth J. Arrow provides perspective on education and preference formation, and Jere R. Behrman considers general conceptual and measurement issues in assessing the social benefits of education and policies related to education. These issues are taken up by experts in four fields--health, parenting, the environment, and crime. Themes addressed include measurement issues regarding what we mean by education and its benefits; basic analytical issues in assessing the impact of education on these social benefits using behavioral data; and whether the social benefits of education justify public policy interventions. Jere R. Behrman is William R. Kenan Jr. Professor of Economics, University of Pennsylvania. Nevzer G. Stacey is Senior Research Analyst, Office of Educational Research, U.S. Department of Education.

Experiments in Personality: Volume 1 (Psychology Revivals) H.J. Eysenck, 2013-10-01 Originally published in 1960, the two volumes of Experiments in Personality report a number of experiments in psychogenetics, psychopharmacology, psychodiagnostics, psychometrics and psychodynamics, all of which formed part of the programme of research which had been developing from the late 1940s at the Maudsley Hospital. Presenting the studies together in a book, rather than the more usual route of journal articles, was itself felt to be an experiment at the time, especially given the wide area covered. The decision was deliberate because all the studies reported formed part of a larger whole, which would have been lost if published separately. Volume I looks at psychogenetics and psychopharmacology.

*Effects of Employment Protection on Worker and Job Flows* Adriana D. Kugler, Giovanni Pica, 2005 This paper uses

the Italian Social Security employer-employee panel to study the effects of the Italian reform of 1990 on worker and job flows. We exploit the fact that this reform increased unjust dismissal costs for firms below 15 employees, while leaving dismissal costs unchanged for bigger firms, to set up a natural experiment research design. We find that the increase in dismissal costs decreased accessions and separations for workers in small relative to big firms, especially in sectors with higher employment volatility. Moreover, we find that the reform reduced firms' employment adjustments on the internal margin as well as entry rates while increasing exit rates.

Neurodevelopmental Disorders Jo Van Herwegen, Deborah Riby, 2014-12-05 Interest in the field of neurodevelopmental disorders has grown exponentially in recent years across a range of disciplines, including psychology, psychiatry, education and neuroscience. The research itself has become more sophisticated, using multidisciplinary methods to probe interdisciplinary questions. *Neurodevelopmental Disorders: Research Challenges and Solutions* provides a thorough overview of the key issues involved in researching neurodevelopmental disorders. The volume includes 14 chapters, arranged over three sections. Chapters in the first section address general research challenges for the study of neurodevelopmental disorders. The second section draws upon specific disorders (such as Williams syndrome, Autism Spectrum Disorders, Down Syndrome, Fragile X Syndrome, ADHD, and Language Disorders) to consider the syndrome-specific issues or challenges that may be crucial to advancing our understanding of aspects of cognition and behavior associated with them. The final section considers how research evidence may be translated into practice to begin making an impact upon the lives of individuals who have neurodevelopmental disorders and their families. Each chapter in the book also includes 'practical tips' for either conducting research with individuals who have neurodevelopmental disorders or considering wider practical issues. The book will be indispensable reading for advanced students, researchers, and practitioners in the fields of developmental psychology, developmental psychopathology, special needs education, neuropsychology, and neurodevelopmental disorders.
