The Oxford Handbook of Comparative Cognition
Thomas R. Zentall, Edward A. Wasserman, 2012-03-20
In the past decade, the field of comparative
cognition has grown and thrived. No less rigorous
than purely behavioristic investigations,
examinations of animal intelligence are useful for
scientists and psychologists alike in their quest
to understand the nature and mechanisms of
intelligence. Extensive field research of various
species has yielded exciting new areas of
research, integrating findings from psychology,
behavioral ecology, and ethology in a unique and
wide-ranging synthesis of theory and research on

animal cognition. The Oxford Handbook of Comparative Cognition contains sections on perception and illusion, attention and search, memory processes, spatial cognition, conceptualization and categorization, problem solving and behavioral flexibility, and social cognition processes including findings in primate tool usage, pattern learning, and counting. The authors have incorporated findings and theoretical approaches that reflect the current state of the field. This comprehensive volume will be a mustread for students and scientists who want to know about the state of the art of the modern science of comparative cognition.

Milk Proteins Mike Boland, Harjinder Singh, Abby Thompson, 2014-07-08 Understanding of the interactions of milk proteins in complex food systems continues to progress, resulting in specialized milk-protein based applications in functional foods, and in protein ingredients for specific health applications. Milk Proteins is the first and only presentation of the entire dairy food chain - from the source to the nutritional aspects affecting the consumer. With focus on the molecular structures and interactions of milk proteins in various processing methods, Milk Proteins presents a comprehensive overview of the biology and chemistry of milk, as well as featuring the latest science and developments. Significant insight into the use of milk proteins from an industry viewpoint provides valuable application-based information. Those working with food and nutritional research and product development will find this book useful. 20% new chapter content - full revision throughout New chapters address: role of milk proteins in human health; aspects of digestion and absorption of milk proteins in the GIT; consumer demand and

future trends in milk proteins; and world supply of proteins with a focus on dairy proteins Internationally recognized authors and editors bring academic and industrial insights to this important topic

Residue Reviews Francis A. Gunther, 2012-12-06 Worldwide concern in scientific, industrial, and governmental com munities over traces of toxic chemicals in foodstuffs and in both abiotic and biotic environments has justified the present triumvirate of specialized publications in this field: comprehensive reviews, rapidly published progress reports, and archival documentations. These three publications are integrated and scheduled to provide in international communication the coherency essential for nonduplicative and current progress in a field as dynamic and complex as environmental contamination and toxicology. Until now there has been no journal or other publication series reserved exclusively for the diversified literature on «toxic chemicals in our foods, our feeds, our geographical surroundings, our domestic animals, our wild life, and ourselves. Around the world immense efforts and many talents have been mobilized to technical and other evaluations of natures, locales, magnitudes, . fates, and toxicology of the persisting residues of these chemicals loosed upon the world. Among the sequelae of this broad new emphasis has been an inescapable need for an articulated set of authorita tive publications where one could expect

to find the latest important world literature produced by this emerging area of science together with documentation of pertinent ancillary legislation.

#### Aerosol Effects on Climate S. G.

Jennings,1993-01-01 There is now a growing awareness that, in addition to the well publicized influence of carbon dioxide and other greenhouse gases on the warming of the earth's atmosphere, aerosol particles may also play an important role in forcing climate change. This volume brings together previously unavailable data and interpretative analyses, derived from studies in both the U.S. and U.S.S.R., which review, update, and assess aerosol-related climatic effects.

Biology and Pathogenesis of Rhabdo- and Filoviruses Asit K Pattnaik, Michael A Whitt, 2014-12-30 Rhabdoviruses and Filoviruses are single-stranded, non-segmented, negative-strand RNA viruses, many of which cause significant morbidity and mortality in humans and animals. Certain members of these virus families have been used as excellent model systems to understand the molecular biology of replication, host responses to infections, and viral countermeasures. Rhabdoviruses have also been used as vaccine vectors as well as oncolytic agents. Studies on Filoviruses have now provided significant insights into how they enter susceptible cells, replicate and cause disease, and also how they evade the host's immune mechanisms. This book addresses the most recent findings on Rhabdovirus and Filovirus structure, replication mechanisms, host cell responses to virus infections and viral countermeasures. Chapters on emerging viruses as well as approaches for therapeutic interventions have also been included. This book represents an authoritative text that brings together the most recent advances on the cellular and molecular biology of Rhabdo- and Filoviruses, including

mechanisms of pathogenesis. Contents: Overview of Rhabdo- and Filoviruses (Asit K Pattnaik and Michael A Whitt) Rhabdovirus Structure (Ming Luo) The Pathway of VSV Entry into Cells (Shem Johnson and Jean Gruenberg) Rhabdovirus Glycoproteins (Yves Gaudin and Michael A Whitt) VSV RNA Transcription and Replication (Jacques Perrault) Host Cell Functions in Vesicular Stomatitis Virus Replication (Phat X Dinh, Anshuman Das, and Asit K Pattnaik) Cytopathogenesis of Rhabdoviruses (Douglas S Lyles) Assembly and Budding of Rhabdo- and Filoviruses (Ziying Han and Ronald N Harty) Rhabdoviruses as Vaccine Vectors: From Initial Development to Clinical Trials (John K Rose and David K Clarke) Oncolytic Rhabdoviruses (Nicole E Forbes and John C Bell) Use of Rhabdoviruses to Study Neural Circuitry (Melanie Ginger, Guillaume Bony, Matthias Haberl, and Andreas Frick) Evolution of Rhabdo- and Filoviruses (Isabel S Novella, John B Presloid, and R Travis Taylor) Emerging Rhabdoviruses (Imke Steffen and Graham Simmons) Rabies Virus Replication and Pathogenesis (Andrew W Hudacek and Matthias J Schnell) Activation and Evasion of Innate Immune Response by Rhabdoviruses (Karl-Klaus Conzelmann) Rabies Virus Vaccines (Ying Huang, Clement W Gnanadurai, and Zhen F Fu) Filovirus Structure and Morphogenesis (Timothy F Booth, Daniel R Beniac, Melissa J Rabb, and Lindsey L Lamboo) Epidemiology and Pathogenesis of Filovirus Infections (Logan Banadyga and Hideki Ebihara) Filovirus Entry into Susceptible Cells (Rohit K Jangra, Eva Mittler, and Kartik Chandran) Filovirus Transcription & Replication (Kristina Brauburger, Laure R Deflubé, and Elke Muhlberger) Innate Immune Evasion Mechanisms of Filoviruses (Christopher F Basler, Gaya K Amarasinghe, and Daisy W Leung) Vaccines and Antivirals for Filoviruses (Chad E Mire and Thomas W Geisbe) Readership: Investigators, graduate

The Social Benefits of Education Jere R. Behrman, Nevzer Stacey, 2010-08-04 For decades, the primary argument in justifying education has been based on its direct economic effects. Yet education also provides social benefits for individuals and society at large, including a better way of taking care of ourselves, and consequently creating a better society to live in. Though it is difficult to quantify these social benefits, a more systematic analysis would improve our understanding of the full effects of education and provide a basis for considering related policies. The Office of Research of the United States Department of Education commissioned a series of papers on measuring these effects of education. Those papers, revised and updated, are collected here. Kenneth J. Arrow provides perspective on education and preference formation, and Jere R. Behrman considers general conceptual and measurement issues in assessing the social benefits of education and policies related to education. These issues are taken up by experts in

four fields—health, parenting, the environment, and crime. Themes addressed include measurement issues regarding what we mean by education and its benefits; basic analytical issues in assessing the impact of education on these social benefits using behavioral data; and whether the social benefits of education justify public policy interventions. Jere R. Behrman is William R. Kenan Jr. Professor of Economics, University of Pennsylvania. Nevzer G. Stacey is Senior Research Analyst, Office of Educational Research, U.S. Department of Education.

Experiments in Personality: Volume 1 (Psychology Revivals) H.J. Eysenck, 2013-10-01 Originally published in 1960, the two volumes of Experiments in Personality report a number of experiments in psychogenetics, psychopharmacology, psychodiagnostics, psychometrics and psychodynamics, all of which formed part of the programme of research which had been developing from the late 1940s at the Maudsley Hospital. Presenting the studies together in a book, rather than the more usual route of journal articles, was itself felt to be an experiment at the time, especially given the wide area covered. The decision was deliberate because all the studies reported formed part of a larger whole, which would have been lost if published separately. Volume I looks at psychogenetics and psychopharmacology.

Effects of Employment Protection on Worker and Job Flows Adriana D. Kugler, Giovanni Pica, 2005 This paper uses the Italian Social Security employer-employee panel to study the effects of the Italian reform of 1990 on worker and job flows. We exploit the fact that this reform increased unjust dismissal costs for firms below 15 employees, while leaving dismissal costs unchanged for bigger firms, to set up a natural experiment research design. We find that the

increase in dismissal costs decreased accessions and separations for workers in small relative to big firms, especially in sectors with higher employment volatility. Moreover, we find that the reform reduced firms' employment adjustments on the internal margin as well as entry rates while increasing exit rates.

Neurodevelopmental Disorders Jo Van Herwegen, Deborah Riby, 2014-12-05 Interest in the field of neurodevelopmental disorders has grown exponentially in recent years across a range of disciplines, including psychology, psychiatry, education and neuroscience. The research itself has become more sophisticated, using multidisciplinary methods to probe interdisciplinary questions. Neurodevelopmental Disorders: Research Challenges and Solutions provides a thorough overview of the key issues involved in researching neurodevelopmental disorders. The volume includes 14 chapters, arranged over three sections. Chapters in the first section address general research challenges for the study of neurodevelopmental disorders. The second section draws upon specific disorders (such as Williams syndrome, Autism Spectrum Disorders, Down Syndrome, Fragile X Syndrome, ADHD, and Language Disorders) to consider the syndromespecific issues or challenges that may be crucial to advancing our understanding of aspects of cognition and behavior associated with them. The final section considers how research evidence may be translated into practice to begin making an impact upon the lives of individuals who have neurodevelopmental disorders and their families. Each chapter in the book also includes 'practical tips' for either conducting research with individuals who have neurodevelopmental disorders or considering wider practical issues. The book will be indispensable reading for advanced students, researchers, and practitioners in the

fields of developmental psychology, developmental psychopathology, special needs education, neuropsychology, and neurodevelopmental disorders.
