**Programming 2D Games** Charles Kelly, 2012-06-21 A First Course in Game Programming Most of today's commercial games are written in C++ and are created using a game engine. Addressing both of these key elements, Programming 2D Games provides a complete, up-to-date introduction to game programming. All of the code in the book was carefully crafted using C++. As game programming techniques are introduced, students learn how to incorporate them into their own game engine and discover how to use the game engine to create a complete game. Enables Students to Create 2D Games The text covers sprites, animation, collision detection, sound, text display, game dashboards, special graphic effects, tiled games, and network programming. It systematically explains how to program DirectX applications and emphasizes proper software engineering techniques. Every topic is explained theoretically and with working code examples. The example programs for each chapter are available at [www.programming2dgames.com](http://www.programming2dgames.com).

**Urban Climate Politics** Jeroen van der Heijden, Harriet Bulkeley, Chiara Certomà, 2019-05-09 An overview of the forms of agency in urban climate politics, including their strengths, limitations and the power dynamics between them. Written by renowned scholars from around the globe, it is ideal for researchers and practitioners working in the area of urban climate politics and governance.

**Global Climate Policy** Urs Luterbacher, Detlef F. Sprinz, 2018-08-14 Analyses of the international climate change regime consider the challenges of maintaining current structures and the possibilities for creating new forms of international cooperation. The current international climate change regime has a long history, and it is likely that its evolution will continue, despite such recent setbacks as the decision by President Donald Trump to withdraw the United States from the Paris Agreement of 2015. Indeed, the U.S. withdrawal may spur efforts by other members of the international community to strengthen the Paris accord on their own. This volume offers an original contribution to the study of the international political context of climate change over the last three decades, with fresh analyses of the current international climate change regime that consider both the challenges of maintaining current structures and the possibilities for creating new forms of international cooperation. The contributors are leading experts with both academic and policy experience; some are advisors to governments and the Climate Secretariat itself. Their contributions combine substantive evidence with methodological rigor. They discuss such topics as the evolution of the architecture of the climate change regime; different theoretical perspectives; game-theoretical and computer simulation approaches to modeling outcomes and assessing agreements; coordination with other legal regimes; non-state actors; developing and emerging countries; implementation, compliance, and effectiveness of agreements; and the challenges of climate change mitigation after the Paris Agreement. Contributors Michaël Aklin, Guri Bang, Daniel Bodansky, Thierry Bréchet, Lars Brückner, Frank Grundig, Jon Hovi, Yasuko Kameyama, Urs Luterbacher, Axel Michaelowa, Katharina Michaelowa, Carla Norrlof, Matthew Paterson, Lavanya Rajamani, Tora Skodvin, Detlef F. Sprinz, Arild Underdal, Jorge E. Viñuales, Hugh Ward

**The Urban Climate Challenge** Craig Johnson, Noah Toly, Heike Schroeder, 2015-02-20 Drawing upon a variety of empirical and theoretical perspectives, The Urban Climate Challenge provides a hands-on perspective about the political and technical challenges now facing cities and transnational urban networks in the global climate regime. Bringing together experts working in the fields of global environmental governance, urban sustainability and climate change, this volume explores the ways in which cities, transnational urban networks and global policy institutions are repositioning themselves in relation to this changing global policy environment. Focusing on both Northern and Southern experience across the globe, three questions that have strong bearing on the ways in which we understand and assess the changing relationship between cities and global climate system are examined. How are cities repositioning themselves in relation to the global climate regime? How are cities being repositioned – conceptually and epistemologically? What are the prospects for crafting policies that can reduce the urban carbon footprint while at the same time building resilience to future climate change? The Urban Climate Challenge will be of interest to scholars of urban climate policy, global environmental governance and climate change. It will be of interest to readers more generally interested in the ways in which cities are now addressing the inter-related challenges of sustainable urban growth and global climate change. Chapter 9 and Chapter 11 of this book is freely available as a downloadable Open Access PDF at [www.tandfebooks.com/openaccess](http://www.tandfebooks.com/openaccess). It has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license.

**Building on the Kyoto Protocol** Kevin A. Baumert, 2002 According to the contributors of this volume, a wide range of options in addition to the Kyoto Protocol need to be considered to promote long-term climate protection and bridge the growing divide among nations over how to take action. This compilation explores some of the best alternatives, with special attention to options that promote participation by both industrialized and developing countries.

**Exchange Rates and Inflation** Rudiger Dornbusch, 1988 Collected for the first time in Exchange Rates and Inflation, twenty-two articles are gathered in four parts covering exchange rate theory, special topics in exchange rate economics, equilibrium real exchange rates, and inflation and stabilization.

**On the Economic Interpretation and Measurement of Optimal Capacity Utilization with Anticipatory Expectations** Catherine J. Morrison, 1985 This study builds on recent research giving the notion of capacity utilization clearer economic foundations. In this research optimal output  $Y^*$  is defined as the minimum point on the firm's short-run average total cost curve, and capacity utilization is then computed as  $CU=Y/Y^*$ , where  $Y$  is actual output. Here I extend these concepts to include adjustment costs due to changes in the stock of capital, and nonstatic expectations of future output demand and input prices. The more general notion of CU is shown to depend on the shadow values of the firm's quasifixed inputs, and is decomposed to isolate the effects of anticipatory expectations. An empirical comparison is then made between traditional indices and alternative economic CU measures, using annual U.S. manufacturing data 1954-80. The calculated indices exhibit plausible patterns, which can be interpreted as the effects of nonstatic expectations and adjustment costs.

**The Economic Effects of the Corporate Income Tax** Alan J. Auerbach, 1984 Discusses the extent to which dividend taxation imposes a double tax on corporate source earnings; the historical impact of tax incentives on the incentives to invest and the value of corporate equity; the effects of limited loss offset provisions on the incentives to invest in risky assets; and the determinants of corporate leverage.

**Taxable and Tax-exempt Interest Rates** Joe Peek, James Allen Wilcox, 1985 This paper investigates empirically the effects of personal and corporate taxes on taxable interest rates and on the spread between taxable and tax-exempt rates. Two main sets of results emerge. First, we establish that the effective marginal investors in the Treasury bill market are households, as opposed to tax-exempt institutions or corporations. We find no evidence of corporate tax rate effects on Treasury bill yields. The study is then extended to an examination of the tax-exempt market. The results there contradict the hypothesis that commercial bank arbitrage generally ensures that the taxable-tax-exempt interest rate spread is determined by the corporate tax rate. Our estimates decisively reject the corporate in favor of the personal income tax rate as being the relevant tax rate of the marginal investor in this market as well.

**Seamless Learning** Chee-Kit Looi, Lung-Hsiang Wong, Christian Glahn, Su Cai, 2019-01-30 This book introduces readers to the latest state of research and development in seamless learning. It consolidates various approaches to and practices in seamless learning from a range of techno-pedagogical, socio-situated and socio-cultural perspectives. Further, it details our current understanding of learning in both formal and informal settings, crossover learning, incidental learning, and context-based learning approaches, together with these aspects' linkages to the notion of seamlessness. The book is divided into sections addressing the theorization of seamless learning, understanding informal learning, research methodological issues, technology-enabled seamless learning and real-world applications of seamless learning.

**Climate Change and Cities** Cynthia Rosenzweig, William D. Solecki, Patricia Romero-Lankao, Shagun Mehrotra, Shobhakar Dhakal, Somayya Ali Ibrahim, 2018-03-29 Climate Change and Cities bridges science-to-action for climate change adaptation and mitigation efforts in cities around the world.

**Climate Displacement** Jamie Draper, 2023-11-09 Climate change is reshaping patterns of displacement around the world. Extreme weather events destroy homes, environmental degradation threatens the viability of livelihoods, sea level rise and coastal erosion force communities to relocate, and risks to food and resource security magnify the sources of political instability. Climate displacement—the displacement of people driven at least in part by the impacts of climate change—is a pressing moral challenge that is incumbent upon us to address. This book develops a political theory of climate displacement. Most work on climate displacement has tended to take an idealised climate refugee as its focus. But focusing on the figure of the climate refugee obscures the complexity and heterogeneity of climate displacement. Instead, this book takes the empirical dynamics of climate displacement as its starting point. It examines the moral and political problems raised by the interaction of climate change and displacement in five domains: community relocation, territorial sovereignty, labour migration, refugee movement, and internal displacement. In each context, climate displacement raises distinct questions, which this book explores on their own terms. At the same time, this book treats climate displacement as a unified phenomenon by examining the overarching questions of responsibility and fairness that it raises. The result is an empirically grounded political theory that both maps the conceptual terrain of climate displacement and charts a course for meeting the moral challenge that it raises.

**Notes on the Effect of Capital Gains Taxation on Non-Austrian Assets** Daniel J. Kovenock,Michael Rothschild,1985 This paper is an attempt to assess the effect of capital gains taxation on non-Austrian assets, such as claims to profits of continuing enterprises. As compared to taxation on an accrual basis, the capital gains tax discourages sales of appreciated assets. This is the lock-in effect. Because assets subject to capital gains taxation are generally held a long time, conventional estimates suggest that the effective rate of capital gains taxation is low. We contend that conventional estimates could seriously underestimate the effective rate of capital gains taxation because they ignore uncertainty. We construct a model which allows us to calculate the value of being able to actively manage a portfolio and use this model to calculate the effective rate of capital gains taxation. For several plausible parameter values the effective rate is significantly higher than estimates under certainty. We also discuss some of the ways in which the lock-in effect may distort the allocation of investment funds and the efficient workings of the capital market
