Recipes for Continuation Harry Dankowicz, Frank Schilder, 2013-01-01 This book provides a comprehensive introduction to the mathematical methodology of parameter continuation, the computational analysis of families of solutions to nonlinear mathematical equations. It develops a systematic formalism for constructing abstract representations of continuation problems and for implementing these in an existing computational platform. Recipes for Continuation lends equal importance to theoretical rigor, algorithm development, and software engineering; demonstrates the use of fully developed toolbox templates for single- and multisegment boundary-value problems to the analysis of periodic orbits in smooth and hybrid dynamical systems, quasi-periodic invariant tori, and homoclinic and heteroclinic connecting orbits between equilibria and/or periodic orbits; shows the use of vectorization for optimal computational efficiency, an object-oriented paradigm for the modular construction of continuation problems, and adaptive discretization algorithms for guaranteed bounds on estimated errors; and contains extensive and fully worked examples that illustrate the application of the MATLAB®-based Computational Continuation Core (COCO) to problems from recent research literature that are relevant to dynamical system models from mechanics, electronics, biology, economics, and neuroscience.

The Cambridge Handbook of Technical Standardization Law Jorge L. Contreras, 2017-12-14 Technical standards are ubiquitous in the modern networked economy. They allow products made and sold by different vendors to interoperate with little to no consumer effort and enable new market entrants to innovate on top of established technology platforms. This groundbreaking volume, edited by Jorge L. Contreras, assesses and analyzes the legal aspects of technical standards and standardization. Bringing together more than thirty leading international scholars, advocates, and policymakers, it focuses on two of the most contentious and critical areas pertaining to standards today in key jurisdictions around the world: antitrust/competition law and patent law. (A subsequent volume will focus on international trade, copyright, and administrative law.) This comprehensive, detailed examination sheds new light on the standards that shape the global technology marketplace and will serve as an indispensable tool for scholars, practitioners, judges, and policymakers everywhere.

Advanced Solar-Distillation Systems G. N. Tiwari, Lovedeep Sahota, 2017-07-29 This book is primarily intended to serve as a textbook and reference work for graduate and professional training coursework on solar desalination of water. The book begins with an introduction to the increasing demand for potable water, various types of water pollution and its impacts on human health, and goes on to cover basics of desalination technologies. It covers all aspects of solar-energy based distillation and desalination for producing potable water resources, including radiation and heat transfer concepts, a history of solar distillation systems, and background on solar collectors. The contents include thermal modeling and parametric study of solar distillation. Energy and exergy aspects are analyzed in detail, including energy matrices of solar distillation. A special chapter on exeroeconomics introduces fundamental equations which include the general balance equation, thermodynamic balance equations, and economic balance equations. A chapter on Economic Analysis of Solar Distillation completes the coverage. The book includes solved examples and end-of-chapter exercises in the form of both problems and objective-type questions. The contents of this book are useful to students, researchers,

professionals, and policymakers looking for a comprehensive resource on solar desalination.

Solar Flare Loops: Observations and Interpretations Guangli Huang, Victor F. Melnikov, Haisheng Ji, Zongjun Ning, 2018-01-31 This book provides results of analysis of typical solar events, statistical analysis, the diagnostics of energetic electrons and magnetic field, as well as the global behavior of solar flaring loops such as their contraction and expansion. It pays particular attention to analyzing solar flare loops with microwave, hard X-ray, optical and EUV emissions, as well as the theories of their radiation, and electron acceleration/transport. The results concerning influence of the pitch-angle anisotropy of non-thermal electrons on their microwave and hard X-ray emissions, new spectral behaviors in X-ray and microwave bands, and results related to the contraction of flaring loops, are widely discussed in the literature of solar physics. The book is useful for graduate students and researchers in solar and space physics.
