Archives in the New Age Ewa Rosowska,2002

Arguments and Structure Teun Hoekstra,2004-01-01 This book contains 14 articles by Teun Hoekstra (1953-1998) on core issues in syntactic theory. Some articles focus on the structure of DP, others on the structure of the sentence as a whole, while others still deal explicitly with the parallels between the two. The papers are distributed over four sections: Argument structure, T-chains, The morpho-syntax of verbal and nominal projections and Small clauses. More than half of the articles in this book are published here for the first time or appear for the first time in English. Hoekstra's work is characterized by a fundamental interest in the central questions of syntactic theory, most notably the relation between argument structure and X-bar structure. This concentrated interest led to a deep understanding of the notion of transitivity, with respect to both the status of the external argument and that of the internal argument, where status refers to both the content and the licensing. In this collection of papers, Hoekstra reports on his insights in these matters. As far as content and licensing of the external argument is concerned, this collection contains papers on the relation between passives and their active counterparts, the parallels between possessives and transitives and the differences and similarities between past participles and infinitives. As to the internal argument, we find papers addressing sentential complementation, verbal affixation and resultatives. And there is a whole section on tense, and its role in keeping the sentence together. One of the papers in this collection is Hoekstra's classic, but hitherto unpublished Small clauses everywhere (more than 70 pages), which summarizes Hoekstra's views on such issues as resultatives, particle verbs and double object constructions.

Data Governance Ismael Caballero,Mario Piattini,2024-01-28 This book presents a set of models, methods, and techniques that allow the successful implementation of data governance (DG) in an organization and reports real experiences of data governance in different public and private sectors. To this end, this book is composed of two parts. Part I on “Data Governance Fundamentals” begins with an introduction to the concept of data governance that stresses that DG is not primarily focused on databases, clouds, or other technologies, but that the DG framework must be understood by business users, systems personnel, and the systems themselves alike. Next, chapter 2 addresses crucial topics for DG, such as the evolution of data management in organizations, data strategy and policies, and defensive and offensive approaches to data strategy. Chapter 3 then details the central role that human resources play in DG, analysing the key responsibilities of the different DG-related roles and boards, while chapter 4 discusses the most common barriers to DG in practice. Chapter 5 summarizes the paradigm shifts in DG from control to value creation. Subsequently chapter 6 explores the needs, characteristics and key functionalities of DG tools, before this part ends with a chapter on maturity models for data governance. Part II on “Data Governance Applied” consists of five chapters which review the situation of DG in different sectors and industries. Details about DG in the banking sector, public administration, insurance companies, healthcare and telecommunications each are presented in one chapter. The book is aimed at academics, researchers and practitioners (especially CIOs, Data Governors, or Data Stewards) involved in DG. It can also serve as a reference for courses on data governance in information systems.
