The Secret Life of Fish Doug Mackay-Hope, 2021-11-02 Discover the astonishing truth about our aquatic cousins: how they think and what they know, their experiences and unique behaviours, and the many things we have in common. There are 33,000 species of fish on our planet, and that number is constantly increasing. In context, that is more than all the species of mammals, birds, amphibians and reptiles added together, making fish the most numerous vertebrates on our planet. Waters worldwide are teeming with these elusive creatures, but how much do we really know about them? Grouped into thematic chapters – including the Dangerous and Deadly, Unusual Giants and Mini Marvels – in this comprehensive book biologist Doug Mackay-Hope profiles the secret lives of 50 of our most interesting underwater cousins in an insightful and myth-busting study, complete with charming watercolour diagrams and expert insights. Learn about the White-Spotted Pufferfish, whose spines hide a deadly toxin, or the Ocellate River Stingray, who lurks in the rivers of South America and who can kill with just one touch of its barbed stinger. Meet Bargibant's Pygmy Seahorse, who measures just 2cm in length, as well as the enormous Whale Shark, which grows to around 13m in length. Be fascinated by the weird creatures of the deep ocean, such as the Peter's Elephantnosed Fish or the kaleidoscopic Picasso's Triggerfish. With a foreword by Jeremy Wade, presenter of River Monsters and Mighty Rivers, and official fish aficionado, this book is a complete compendium of fascinating fish facts, with maps showing where in the globe they can be found, plus facts on how they live, hunt and escape predators. Beautiful illustrations and photographs accompany each entry, as well as interesting facts on how they evolved to adapt to changing environments, making this book the perfect guide to all things aquatic.

The national programme for IT in the NHS Great Britain: Parliament: House of Commons: Committee of Public Accounts, 2011-08-03 The National Programme for IT in the NHS is an ambitious £11.4 billion programme of investment. This report is concerned with a central part of the Programme, where the aim was to create a fully integrated electronic care records system, which is expected to cost around £7 billion in total. The Department has failed to demonstrate the benefits achieved for the £2.7 billion spent to date on care records systems and has accepted it is unable to deliver its original vision. It is now relying on individual NHS trusts to develop systems compatible with those in the Programme. Furthermore the Department could not explain how potential inconsistencies would be dealt with or what it will cost local NHS organisations to connect up. The Department has not got the best out of its suppliers, despite having paid them some £1.8 billion so far. One supplier, CSC, has yet to deliver the bulk of the systems it is contracted to supply and has instead implemented a large number of interim systems as a stopgap. The Department has been in negotiations with CSC for over a year, but conceded that it may be more expensive to terminate the contract than to complete it. The Department has also revised its contract with BT reducing the number of systems and increasing the price for each system delivered. This has resulted in BT being paid £9 million to implement systems at each NHS site, even though the same systems have been purchased for under £2

million by NHS organisations outside the Programme. The Committee is further concerned about the problems in getting timely and reliable information from the Department. Information provided has frequently been late, has contained inconsistencies and has contradicted other evidence.

Department of Health Great Britain: Parliament: House of Commons: Committee of Public Accounts, 2007-04-17 The National Programme for IT in the NHS (the Programme) was set up to utilise information technology to help provide high quality services to patients, using centrally managed procurement to provide impetus to the uptake of IT and to secure economies of scale. Expenditure on the Programme is expected to be £12.4 billion over ten years to 2013-14. Following a National Audit Office report (HC 1173, session 2005-06, ISBN 9780102938289), the Committee examined progress made by the Department of Health in implementing the Programme, particularly the current status of the shared electronic patient clinical record; the costs of the Programme; the local management and implementation of the systems within the NHS; the extent to which clinicians were involved in developing the systems; the management of suppliers; and patient confidentiality. Four overall conclusions are drawn: (1) the piloting and deployment of the shared electronic patient clinical record is already running two years behind schedule and no firm implementation date exists; (2) the suppliers to the Programme are clearly struggling to deliver (one of the largest, Accenture, has now withdrawn), and the Department is unlikely to complete the Programme anywhere near its original schedule; (3) the Department has much still to do to win hearts and minds in the NHS, especially among clinicians, and needs to show that it can deliver on its promises, supply solutions that are fit for purpose, learn from its mistakes, and respond constructively to feedback from users in the NHS; (4) there is still much uncertainty about the costs of the Programme for the local NHS and the value of the benefits it should achieve.

The National Programme for IT in the NHS House of Commons Public Accounts Commi, 2009 The National Programme for IT is dependent on the deployment of systems in an increasingly devolved NHS. This report examines the progress being made in delivering the Programme, including the termination of Fujitsu's contract as the Local Service Provider for the South. Some systems are being deployed across the NHS. The Care Records Service, however, is at least four years behind schedule, with the Department's latest forecasts putting completion at 2014-15. At 31 August 2008, new care records systems had been deployed in 133 of the 380 Trusts. Trusts in the North, Midlands and East have been receiving an interim system and will have to go through a further deployment in due course to implement Lorenzo, the care records software for the North, Midlands and East, which has suffered major delays. By the end of 2008, Lorenzo had not been deployed throughout any Acute Trust and in only one Primary Care Trust. Fujitsu's contract covering the South of England was terminated in May 2008. Negotiations to reset the contract had failed because the two sides were unable to agree on the price and commercial terms. The future arrangements for the South remain under discussion, but Trusts which have not yet implemented a new care records system will be allowed to choose between those offered by the two remaining Local Service Providers, BT and CSC. The estimated cost of the Programme is £12.7 billion, including £3.6 billion of local costs, although this figure remains uncertain. Keeping patient data secure is crucial to the reputation and

success of the Programme, and the Department is confident that the mechanisms it is putting in place will provide a high level of security.

Conundrum Richard Bacon, 2013-06-18 Government failure is affecting everyone. The single mum worried sick by a tax credit demand from HMRC to 'repay' thousands of pounds she never received; the family whose holiday was ruined because the Passport Office couldn't issue passports in time; the school that couldn't open at the start of term because CRB checks were being carried out by an organisation in meltdown; the farmers led to bankruptcy and even suicide by a Kafkaesque system for administering farm payments; and rail operators facing an uncertain future because the Department for Transport inadvertently landed the whole rail franchising system in chaos. Why is government getting it so wrong? Richard Bacon and Christopher Hope delve into the astonishing world of cock-ups and catastrophes and ponder why those at the top continue to fall short.

digitalSTS Janet Vertesi, David Ribes, 2019-05-07 Scholars across the humanities, social sciences, and information sciences are grappling with how best to study virtual environments, use computational tools in their research, and engage audiences with their results. Classic work in science and technology studies (STS) has played a central role in how these fields analyze digital technologies, but many of its key examples do not speak to today's computational realities. This groundbreaking collection brings together a world-class group of contributors to refresh the canon for contemporary digital scholarship. In twenty-five pioneering and incisive essays, this unique digital field guide offers innovative new approaches to digital scholarship, the design of digital tools and objects, and the deployment of critically grounded technologies for analysis and discovery. Contributors cover a broad range of topics, including software development, hackathons, digitized objects, diversity in the tech sector, and distributed scientific collaborations. They discuss methodological considerations of social networks and data analysis, design projects that can translate STS concepts into durable scientific work, and much more. Featuring a concise introduction by Janet Vertesi and David Ribes and accompanied by an

interactive microsite, this book provides new perspectives on digital scholarship that will shape the agenda for tomorrow's generation of STS researchers and practitioners.
