Automation in Construction toward Resilience

Ehsan Noroozinejad Farsangi, Mohammad Noori, Tony T.Y. Yang, Paulo B. Lourenço, Paolo Gardoni, Izuru Takewaki, Eleni Chatzi, Shaofan Li, 2023-09-29 While the word automation may conjure images of robots taking over jobs, the reality is much more nuanced. In construction, for instance, automation is less likely to diminish employment opportunities than it is to increase productivity. Indeed, automation alongside the global need for new and updated infrastructure and better and more affordable housing can help shape the direction of the construction industry. The key will be anticipating and preparing for the shift, in part by developing new skills in the current and future workforce. This book presents all aspects of automation in construction pertaining to the use of information technologies in design, engineering, construction technologies, and maintenance and management of constructed facilities. The broad scope encompasses all stages of the construction life cycle from initial planning and design, through the construction of the facility, its operation, and maintenance, to the eventual dismantling and recycling of

buildings and engineering structures. Features:
Examines Building Information Management systems,
allowing on-site execution of construction more
efficient, and for project teams to eliminate
mistakes and better coordinate the workforce
Presents the latest information on the automation
of modular construction, production in factories,
including 3-D printing of components such as
facades, or even load-bearing and essential
components

Inflection 06: Originals Sir Peter Cook, Alison
Brooks, Beatriz Colomina, Sean Godsell, Adam
Peacock, 2019-09-16 Architects are expected to
create original ideas resulting in a unique,
bespoke design. With the rise of Modern
Architecture, originality became ingrained in
perceptions of good design. As a result,
originality has become a barometer against which
we measure the value of design. However technology
today allows for ease of replication and copies,
thus originality in design has become an
ostensibly hollow prospect. Originals gathers a
wide range of responses, varied in their opinions
and approaches to originality and authorship in
design and architecture. Inflection is a student-
run design journal based at the Melbourne School
of Design, University of Melbourne. Born from a
desire to stimulate debate and generate ideas, it
advocates the discursive voice of students,
academics and practitioners. Founded in 2013,
Inflection is a home for provocative writing—a
place to share ideas and engage with contemporary
discourse.

We Are All Targets Matt Potter, 2023-01-10 The

incredible untold origin story of cyberwar and the hackers who unleashed it on the world, tracing their journey from the ashes of the Cold War to the criminal underworld, governments, and even Silicon Valley. Two years before 9/11, the United States was attacked by an unknown enemy. No advance warning was given, and it didn't target civilians. Instead, tomahawk missiles started missing their targets, US agents were swept up by hostile governments, and America's enemies seemed to know its every move in advance. A new phase of warfare—cyber war—had arrived. And within two decades it escaped Pandora's Box, plunging us into a state of total war where every day, countless cyber attacks perpetrated by states and mercenaries are reshaping the world. After receiving an anonymous email with leaked NATO battle plans during the bombardment of Kosovo, journalist Matt Potter embarked on a twenty-year investigation into the origins of cyber war and how it came to dominate the world. He uncovered its beginnings – worthy of a Bond movie – in the last days of the Cold War, as the US and its allies empowered a generation of Eastern European hackers, only to wake up in the late 90s to a new world order. It's a story that winds through Balkan hacking culture, Russia, Silicon Valley, and the Pentagon, introducing us to characters like a celebrity hacker with missing fingers who keeps escaping prison, FBI agents chasing the first generation of cyber mercenaries in the 90s, tech CEOs, and Russian generals obsessed with a Cold War rematch. Never before told, this is the riveting secret history of cyberwar not as

governments want it to be – controlled, military-directed, discreet, and sophisticated – but as it really is: anarchic, chaotic, dangerous, and often thrilling.
