Demand Media John Deighton, 2011

Demand Studios: How Cheap Content Written Without Expertise Is Destroying the Reliability of Information on the Internet Mumar Oneida, 2011-03-07 A book about the unethical practices of Demand Studios/Demand Media.

Television on Demand MJ Robinson, 2017-06-01 Since the beginning of broadcasting, radio and television producers have pushed their shows to audiences in controlled environments that end in a discrete and quantifiable site to be transformed into advertising rates. Today's viewers program their DVR's to create their own viewing schedules, wait to watch entire seasons in marathon DVD viewing sessions and stream shows to their mobile devices. The rise of a curatorial culture where viewers create their own entertainment packages and select from a buffet of viewing options and venues has caused a seismic shift for the traditional television industry. While audiences clamor for more story-driven and scripted entertainment, their new viewing habits undermine the dominant economic structures that fund quality episodic series. Television on Demand examines how we have reached this present moment; and considers the viable future(s) of this crucial culture industry. This leads to an understanding of an empowered audience that realizes its means of control of how it consumes media, as well as a new way of looking at the industry we have traditionally and currently call 'television.'

Analytic Activism David Karpf, 2016-11-01 Among the ways that digital media has transformed political activism, the most remarkable is not that new media allows disorganized masses to speak, but that it enables organized activist groups to listen. Beneath the waves of e-petitions, likes, and hashtags lies a sea of data - a newly quantified form of supporter sentiment - and advocacy organizations can now utilize new tools to measure this data to make decisions and shape campaigns. In this book, David Karpf discusses the power and potential of this new analytic activism, exploring the organizational and media logics that determine how digital inputs shape the choices that political campaigners make. He provides the first careful analysis of how organizations like Change.org and Upworthy.com influence the types of political narratives that dominate our Facebook newsfeeds and Twitter timelines, and how MoveOn.org and its netroots peers use analytics to listen more effectively to their members and supporters. As well, he identifies the boundaries that define the scope of this new style of organized citizen engagement. But also raising a note of caution, Karpf identifies the dangers and limitations in putting too much faith in these new forms of organized listening.

The Social Media Reader Michael Mandiberg, 2012-03 The first collection to address the collective transformation happening in response to the rise of social media With the rise of web 2.0 and social media platforms taking over vast tracts of territory on the internet, the media landscape has shifted drastically in the past 20 years, transforming previously stable relationships between media creators and consumers. The Social Media Reader is the first collection to address the collective transformation with pieces on social media, peer production, copyright politics, and other aspects of

contemporary internet culture from all the major thinkers in the field. Culling a broad range and incorporating different styles of scholarship from foundational pieces and published articles to unpublished pieces, journalistic accounts, personal narratives from blogs, and whitepapers, *The Social Media Reader* promises to be an essential text, with contributions from Lawrence Lessig, Henry Jenkins, Clay Shirky, Tim O'Reilly, Chris Anderson, Yochai Benkler, danah boyd, and Fred von Loehmann, to name a few. It covers a wide-ranging topical terrain, much like the internet itself, with particular emphasis on collaboration and sharing, the politics of social media and social networking, Free Culture and copyright politics, and labor and ownership. Theorizing new models of collaboration, identity, commerce, copyright, ownership, and labor, these essays outline possibilities for cultural democracy that arise when the formerly passive audience becomes active cultural creators, while warning of the dystopian potential of new forms of surveillance and control.

The Routledge Companion to Advertising and Promotional Culture Matthew P. McAllister, Emily West, 2013-02-11 *The Routledge Companion to Advertising and Promotional Culture* provides an essential guide to the key issues, methodologies, concepts, debates, and policies that shape our everyday relationship with advertising. The book contains eight sections: *Historical Perspectives* considers the historical roots and their relationship to recent changes of contemporary advertising and promotional practice. *Political Economy* examines how market forces, corporate ownership, and government policies shape the advertising and media promotion environment. *Globalization* presents work on advertising and marketing as a global, intercultural, and transnational practice. *Audiences as Labor, Consumers, Interpreters, Fans* introduces how people construct promotional meaning and are constructed as consumers, markets, and labor by advertising forces. *Identities* analyzes the ways that advertising constructs images and definitions of groups -- such as gender, race and the child -- through industry labor practices, marketing, as well as through representation in advertising texts. *Social Institutions*

looks at the pervasiveness of advertising strategies in different social domains, including politics, music, housing, and education. *Everyday Life* highlights how a promotional ethos and advertising initiatives pervade self image, values, and relationships. *The Environment* interrogates advertising's relationship to environmental issues, the promotional efforts of corporations to construct green images, and mass consumption's relationship to material waste. With chapters written by leading international scholars working at the intersections of media studies and advertising studies, this book is a go-to source for those looking to understand the ways advertising has shaped consumer culture, in the past and present.

Prospects for On-demand Media; a Report on a Research Approach Ithiel de Sola Pool, Charles Murray, Kenneth Dobb, 1972

The Television Will Be Revolutionized, Second Edition Amanda D. Lotz, 2014-09-19 Go behind the TV screen to explore what is changing, why it is changing, and why the changes matters Many proclaimed the "end of television" in the early years of the twenty-first century, as capabilities and features of the boxes that occupied a central space in American living rooms for the preceding fifty years were radically remade. In this revised, second edition of her definitive book, Amanda D. Lotz proves that rumors of the death of television were greatly exaggerated and explores how new distribution and viewing technologies have resurrected the medium. Shifts in the basic practices of making and distributing television have not been hastening its demise, but are redefining what we can do with television, what we expect from it, how we use it—in short, revolutionizing it. Television, as both a technology and a tool for cultural storytelling, remains as important today as ever, but it has changed in fundamental ways. *The Television Will Be Revolutionized* provides a sophisticated history of the present, examining television in what Lotz terms the "post-network" era while providing frameworks for understanding the continued change in the medium. The second edition addresses adjustments throughout the industry wrought by broadband delivered television such as Netflix, YouTube, and cross-platform initiatives like TV Everywhere, as well as how technologies such as tablets and smartphones have changed how and where we view. Lotz begins to deconstruct the future of different kinds of television—exploring how "prized content," live television sports and contests, and linear viewing may all be "television," but very different types of television for both viewers and producers. Through interviews with those working in the industry, surveys of trade publications, and consideration of an extensive array of popular shows, Lotz takes us behind the screen to explore what is changing, why it is changing, and why the changes matter.

Parallel and Distributed Processing and Applications Jiannong Cao, Laurence T. Yang, Minyi Guo, Francis Lau, 2005-01-17

Welcome to the proceedings of the 2nd International Symposium on Parallel and Distributed Processing and Applications (ISPA2004) which was held in Hong Kong, China, 13-15 December, 2004. With the advance of computer networks and hardware technology, parallel and distributed processing has become a key technology which plays an important part in determining future research and development activities in many academic and industrial branches. It provides a means to solve computationally intensive problems by improving processing speed. It is also the only - able approach to building highly reliable and inherently distributed applications. ISPA2004 provided a forum for scientists and engineers in academia and ind-

try to exchange and discuss their experiences, new ideas, research results, and applications about all aspects of parallel and distributed computing. There was a very large number of paper submissions (361) from 26 countries and regions, including not only Asia and the Pacific, but also Europe and North America. All submissions were reviewed by at least three program or technical committee members or external reviewers. It was extremely difficult to select the presentations for the conference because there were so many excellent and interesting submissions. In order to allocate as many papers as possible and keep the high quality of the conference, we finally decided to accept 78 regular papers and 38 short papers for oral technical presentations. We believe that all of these papers and topics not only provide novel ideas, new results, work in progress and state-of-the-art techniques in this field, but also stimulate the future research activities in the area of parallel and distributed computing with applications.

Tell to Win Peter Guber, 2011-03-14 Stories have always had the power to move, but it has only recently become clear that purposeful stories - those created with a specific mission in mind - are essential in persuading others to support a vision or cause. For Peter Guber, what began as a knack for telling stories as one of the world's leading entertainment executives has evolved into a set of principles that anyone can use to achieve their goals - whatever you do in life, you need to be able to tell a good story. In Tell to Win Guber explains how to move beyond PowerPoint slides and spreadsheets to create purposeful stories that can serve as powerful calls to action. He reveals the best way to get noticed, how to turn passive listeners into active participants, and how technology can be used to ensure audience commitment. Featuring wisdom from Guber's meetings with (and lessons from) everyone from Nelson Mandela to YouTube founder Chad Hurley, and Muhammed Ali to Steven Spielberg (who he tutored in making films), Tell to Win entertainingly shows how to craft, deliver and own a story that is capable of turning others into viral advocates for your goal.

Newspaper Competition in the Millennium Janet A. Bridges, 2006 Technology in the 21st century has redesigned most editorial jobs and extended the potential reach of any publication, no matter how small. In effect, not only the individual business models but also the overall industry competitive model has changed. No longer confined to serving a physically defined environment, individual newspapers can set their own goals, both for news distribution and for advertising reach, without concern for physical restrictions. And the continual sales of newspaper properties result in mergers, increased clustering and other types of group alliances. The newspaper industry is also affected competitively by employee recruitment and retention, the non-daily market, other news-related media and non-news carriers of advertising. The industry-related technology has in effect exploded, reaching every news medium in some way. Within the framework of the exploding technological environment, the country's economy and changing demographics have created increased challenges for an industry so dependent on advertising revenue and reader reach. This volume explores the competitive issues as they relate to the industry at this time.
