**Connecting the Dots Between Inflammation and the Inner Workings of Programmed Cell Death** Thomas Kaufmann,W. Wei-Lynn Wong,2020-05-21 Programmed cell death (PCD) is central in maintaining the life of multicellular organisms, during development as well as in healthy adulthood or in the context of disease. The best understood form of PCD is apoptosis, a caspase mediated, immunologically silent cell death that can be initiated in probably all cell types upon aging, lack of growth support, critical damage or infection. One of the key pathways of apoptosis involves mitochondrial outer membrane permeabilization (MOMP), a process tightly regulated by members of the BCL-2 family. Whereas PCD and apoptosis were used synonymously in the past, other forms of PCD have been discovered more recently, including RIPK1/3- and MLKL-dependent necroptosis, resulting in a necrotic phenotype, and pyroptosis. Interestingly, key components of the necroptotic pathway are actively suppressed by apoptotic caspases, and this interconnection allows a switch in cell death modalities with greatly impact on the host's immune response. Recent findings link mitochondria and/or MOMP to non-apoptotic forms of PCD, including ferroptosis and necroptosis, putting this organelle even more in the center of cellular death. This article collection highlights the exciting potential and as yet undiscovered regulation of programmed cell death that can impact the immune system and its response.

**Connect the Dots...To Become An Impact Player** Dick Lynch,2003-10 The picture in your mind and heart is clear. You want to be an Impact Player in the game of life. Unfortunately, the roadmap on how to become an Impact Player is not so clear. In order to Connect the Dots, you need help! What's a dot? A dot is advice from someone you respect--an Impact Player. Impact Players are from business, government, sports, entertainment, academia, and non-profit organizations. They can be young, old, men, women, persons of color, white, or physically challenged. Impact Players reside in every nation and territory. Impact Players get beaten up and bruised in this game of life, but they always get up with a passion to succeed and a stronger resolve to win. Impact Players get their Ph.D.s from the School of Hard Knocks. In Connect the Dots, Impact Players reveal how they achieved their success and the steps to replicating it. Author Dick Lynch explores the power of knowledge, the advantages of having teammates, and the strength of the human spirit. Connect the Dots is divided into four parts: Education, Inspiration, Innovation, and Aggregation: Education clearly defines what you need to do to become an Impact Player and offers you a challenge to do so. Inspiration contains Impact Player interviews that will inspire you to do things right and do the right things. Innovation provides expert advice on why cities, businesses, and all organizations must embrace diversity and change and have exceptional leadership to survive. Aggregation illustrates how people from every race and culture are in this game of life together and why we must develop a fellowship of diversity for our children and ourselves. Advanced Semiconductor Heterostructures: Novel Devices, Potential Device Applications And Basic Properties Michael A Stroschio,Mitra Dutta,2003-09-12 This volume provides valuable summaries on many aspects of advanced semiconductor heterostructures and highlights the great variety of semiconductor heterostructures that has emerged since their original conception. As exemplified by the chapters in this book, recent progress on advanced semiconductor heterostructures spans a truly remarkable range of scientific fields with an associated diversity of applications. Some of these applications will undoubtedly revolutionize critically important facets of modern technology. At the heart of these advances is the ability to design and control the properties of semiconductor devices on the nanoscale. As an example, the intersubband lasers discussed in this book have a broad range of previously unobtainable characteristics and associated applications as a result of the nanoscale dimensional control of the underlying semiconductor heterostructures. As this book illustrates, an astounding variety of heterostructures can be fabricated with current technology; the potentially widespread use of layered quantum dots fabricated with nanoscale precision in biological applications opens up exciting advances in medicine. In addition, many more excellent examples of the remarkable impact being made through the use of semiconductor heterostructures are given. The summaries in this volume provide timely insights into what we know now about selected areas of advanced semiconductor heterostructures and also provide foundations for further developments.

**Dynamic Chemical Processes on Solid Surfaces** Ken-ichi Tanaka,2017-02-07 In this book, the author determines that a surface is itself a new material for chemical reaction, and the reaction of the surface provides additional new materials on that surface. The revelation of that peculiarity is what makes this book different from an ordinary textbook, and this new point of view will help to provide a new impetus when graduate students and researchers consider their results. The reaction of surface atoms provides additional new compounds, but these compounds cannot be detached from the surface. Some compounds are passive, but others work as catalysts. One superior feature of the surface is the dynamic cooperation of two or more different functional materials or sites on the same surface. This fact has been well established in the preferential oxidation of CO on platinum supported on a carbon nanotube with Ni-MgO at its terminal end. The Pt and Ni-MgO are perfectly separated, but these two are indispensable for the selective oxidation of CO in H2, where the H2O molecule plays a key role. The reader will understand that the complexity of catalysis is due to the complexity of the dynamic processes on the surface.
