Creating Value in Health Care Dr K Ellangovan IAS,2021-08-30

Healthcare is a fragmented service with high variance in quality from hospital to hospital and physician to physician. Often, poor management of hospitals contributes to undesired outcomes. The 'clinical silos' from where services are delivered lacks an integrated approach to converge all related specialists around the patient. Patient satisfaction is never a unit of measurement of effectiveness in hospitals. Patients are not routinely engaged in decision making and often communication with relatives is established on the eve of a catastrophic event, either convince them to plead their

helplessness. This book reveals the internal performance dimensions that are crucial to improve clinical outcomes. The performance enabling framework is an innovative model for any hospital to adapt. The book brings out with clarity what constitutes ‘value’ in the patients’ perspective. The book convincingly argues that appropriate treatment, which is non-negotiable combined with affordability and patient satisfaction are the three dimensions that will create value in healthcare services.

Stronger George Everly Jr.,Dr. Douglas Strouse,Dr. Dennis K. McCormack,2015-08-05 How are first responders, surgeons, and members of the military able to perform remarkable feats in the face of intense stress? How can a professional athlete come

through for his team in the bottom of the ninth when all the world is watching? The answer can be summed up in one word--resilience. Resilient people have learned to bounce back from setbacks and do not hesitate to meet adversity head-on. While others breathe huge sighs of relief when they get to avoid a pressure-filled moment, those strong in resilience live for moments like that and always rise to the occasion. Don't think you have what it takes to excel in those moments? Do you believe that some naturally exude that type of inner strength, and some--such as yourself--just weren't built that way? Think again! Recent studies have shown that the resilience we see so often in first responders, military, and others is something that anyone can build within themselves. Drawing on the unique perspective of a standout team of authors (a stress management expert, a skilled entrepreneur, and a Navy SEAL), Stronger explores the science behind resilience and explains how you can develop this vital trait for yourself. Discover within these pages five factors that combine to unlock deep reserves of personal power:

- Active optimism--believe that you can change things for the better
- Decisive action--you can't succeed if you don't take the leap
- Moral compass--face any challenge with clear guiding principles
- Relentless tenacity--try, try

again• Interpersonal support--gain strength from those around you
Today's demanding world calls for a special kind of strength. That strength is within you already!

Managing Medical Authority Daniel A. Menchik,2021-11-30

How the authority of medicine is continuously shaped by relationships among physicians, industry, colleagues, and organizations Exploring how the authority of medicine is controlled, negotiated, and organized, Managing Medical Authority asks: How is knowledge shared throughout the profession? Who makes

decisions when your heart malfunctions—physicians, hospital administrators, or private companies who sell pacemakers? How do physicians gain and keep their influence? Arguing that medicine’s authority is managed in collegial competition across venues, Daniel Menchik examines the full range of stakeholders driving the direction of the field: medical trainees, clinicians, researchers, administrators, and even the corporations that develop groundbreaking technologies enabling longer and better lives. Menchik takes us into Superior Hospital to witness surgeries and executive negotiations. He moves outside the hospital to watch professional committees craft standards for treatments, case management, and professional ethics. At industry-sponsored meetings, he observes company representatives who train some experienced doctors on their technologies, while deterring others who they think might injure patients. Using an innovative ethnographic approach tying individual actions and their collective consequences, he considers how stakeholders ally across the various venues of medicine, even as they are sometimes pressed into competition within those venues. Menchik finds that these alliances and rivalries strengthen the authority of medicine as a whole. From place to place, and group to group, we see how a

medical specialty renews and reinvigorates itself. Beginning within the walls of the hospital, and moving to the professional and commercial venues that shape it, Managing Medical Authority offers an agenda-setting take on the social organization of medical authority.

Communications: Wireless in Developing Countries and Networks of the Future Ana Pont, Guy Pujolle, S.V.

Raghavan, 2010-08-06 Communications: Wireless in Developing Countries and Networks of the Future The present book contains the proceedings of two conferences held at the World Computer Congress 2010 in Brisbane, Australia (September 20–23) organized by the International Federation for Information Processing (IFIP): the Third IFIP TC 6 International Conference on Wireless Communications and Information Technology for Developing Countries (WCITD 2010) and the IFIP TC 6 International Network of the Future Conference (NF 2010). The main objective of these two IFIP conferences on communications is to provide a platform for the exchange of recent and original contributions in wireless networks in developing countries and networks of the future. There are many exciting trends and developments in the communications industry, several of which are

related to advances in wireless networks, and next-generation Internet. It is commonly believed in the communications industry that a new generation should appear in the next ten years. Yet there are a number of issues that are being worked on in various industry research and development labs and universities towards enabling wireless high-speed networks, virtualization techniques, smart networks, high-level security schemes, etc. We would like to thank the members of the Program Committees and the external reviewers and we hope these proceedings will be very useful to all researchers interested in the fields of wireless networks and future network technologies.

How Leadership Reputations Are Won and Lost Dr Richard Ford, 2020-01-31 This book stands out from the crowd in providing a fresh original perspective on the relatively underexplored area of a leader's reputation. Reputation is a consequence of everything you say or do; no other tangible or intangible asset is worth as much as your reputation or has such a positive or detrimental impact on your career. Many studies reveal that we care more about what other people think about us than we do about what may have actually happened in reality, and yet there is so little written about the subject. This book gets to grips with how our

reputation is formed in the real world and what really makes the difference in winning and losing a good reputation. The book uncovers the impact of the 'secret vocabulary' used in organizations to shape reputations, and offers tips and advice about how to manage your reputation and how to develop a personal brand to shape your future career direction with integrity and authenticity. Dr Richard Ford is one of the UK's leading leadership coaching and assessment psychologists who has helped hundreds of senior and potential leaders develop successful careers, and now Dr Ford shares 35 years of learning to help you achieve career success.

RUNX Proteins in Development and Cancer Yoram

Groner, Yoshiaki Ito, Paul Liu, James C. Neil, Nancy A. Speck, Andre van Wijnen, 2017-03-15 This volume provides the reader with an overview of the diverse functions of the RUNX family of genes. As highlighted in the introduction and several of the 29 chapters, humans and other mammals have three RUNX genes that are known to play specific roles in blood, bone and neuronal development. However, their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well-known signaling pathways (Wnt, TGF β , Notch, Hippo) is

indicative of a more general function in cell biology. Their documented roles in cell fate decisions include control of proliferation, differentiation, survival, senescence and autophagy. The pleiotropic effects of RUNX in development are mirrored in cancer, where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes. In the latter role, they display hallmarks of both ‘gatekeepers’ that modulate p53 responses and ‘caretakers’ that protect the genome from DNA damage. Several chapters focus on the importance of these genes in leukemia research, where RUNX1 and CBFB are frequently affected by chromosomal translocations that generate fusion oncoproteins, while recent studies suggest wider roles for RUNX modulation in solid cancers. Moreover, RUNX genes are intimately involved in the development and regulation of the immune system, while emerging evidence suggests a role in innate immunity to infectious agents, including HIV. At the biochemical level, the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis. Not surprisingly, RUNX activity is controlled at multiple levels, this includes miRNAs and a plethora of post-translational modifications. Several chapters highlight the

interplay between the three mammalian RUNX genes, where cross-talk and partial functional redundancies are evident. Finally, structural analysis of the RUNX/CBFB interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy. This volume provides a compendium and reference source that will be of broad interest to cancer researchers, developmental biologists and immunologists.

Mindsight Daniel J. Siegel, 2010-01-12 From a pioneer in the field of mental health comes a groundbreaking book on the healing power of mindsight, the potent skill that allows you to make positive changes in your brain—and in your life. Foreword by Daniel Goleman, author of *Emotional Intelligence*

- Is there a memory that torments you, or an irrational fear you can't shake?
- Do you sometimes become unreasonably angry or upset and find it hard to calm down?
- Do you ever wonder why you can't stop behaving the way you do, no matter how hard you try?
- Are you and your child (or parent, partner, or boss) locked in a seemingly inevitable pattern of conflict? What if you could escape traps like these and live a fuller, richer, happier life?

This isn't mere speculation but the result of twenty-five years of careful hands-on clinical work by Daniel J. Siegel, M.D. A Harvard-trained physician, Dr. Siegel is one of the revolutionary global innovators in the integration of brain

science into the practice of psychotherapy. Using case histories from his practice, he shows how, by following the proper steps, nearly everyone can learn how to focus their attention on the internal world of the mind in a way that will literally change the wiring and architecture of their brain. Through his synthesis of a broad range of scientific research with applications to everyday life, Dr. Siegel has developed novel approaches that have helped hundreds of patients. And now he has written the first book that will help all of us understand the potential we have to create our own lives. Showing us mindsight in action, Dr. Siegel describes • a sixteen-year-old boy with bipolar disorder who uses meditation and other techniques instead of drugs to calm the emotional storms that made him suicidal • a woman paralyzed by anxiety, who uses mindsight to discover, in an unconscious memory of a childhood accident, the source of her dread • a physician—the author himself—who pays attention to his intuition, which he experiences as a vague, uneasy feeling in my belly, a gnawing restlessness in my heart and my gut, and tracks down a patient who could have gone deaf because of an inaccurately written prescription for an ear infection • a twelve-year-old girl with OCD who learns a meditation that is like watching myself from outside myself and,

using a form of internal dialogue, is able to stop the compulsive behaviors that have been tormenting her These and many other extraordinary stories illustrate how mindsight can help us master our emotions, heal our relationships, and reach our fullest potential.

How To Build A Great Customer Experience Through

Innovation Dr. Patrick Chin,2014-05-31 This book has four main parts. Each part serves as a prerequisite and drives the next part. Knowing what your customer needs is key to lay a strong insight foundation. Building on these insights, innovation management is both an art and skill to ensure good balance between timing and resource. Innovation, both product and service, is not a one-off event. It needs a life of its own, breathing and growing. Investing in your most valuable asset - employees, sometimes overlooked by many executives, will only bring to life those service innovations built from the insights. To continue innovation within the organization, It must be embedded into the organizational culture through change management, measured and rewarded. A balanced scorecard will keep track that we are not just financially successful but at the same time achieve overall business success,

which includes customers, processes and employee talents. This approach is supported by a C-Lab online proprietary platform with 50 web applications and toolkits by Clairvoyant Lab.

The Transformation of Capacity in International Development

Avideh K. Mayville, 2019-11-30 The Transformation of Capacity in International Development exposes the transformation of capacity within the development discourse through a discursive analysis of USAID projects in Afghanistan and Pakistan between 1977 and 2017. As development agendas increasingly call for human rights approaches to development and the foreign policies of donor states sound alarms over global security threats, capacity development has emerged as the solution to the complex problem of development. Through this examination of USAID's attempts to build capacity in Afghanistan and Pakistan, the book exposes how Western notions of progress, constructed by institutions, government officials, scholars and private sector actors, are obscured by the transformation of capacity. As agendas are translated into projects, they perpetuate historical relationships of global inequality that have corrupted and compete with indigenous models of governance. The Transformation of Capacity in International Development has implications for those considering

the future of human rights–based approaches to development, the international management of global security threats and the sustainability of donor investments.

BOLD NEW WORLD and THE POTENTIALIST MOVEMENT Dr.

Freeman Rader Ph.D.,2019-10-30 This very large 465 page book is actually 2 separate but closely related books bound together as one – an inspirational novel and a thought-provoking philosophy book. Together they tell the story of a bold and visionary group of people creating a highly advanced prototype community and way of life based upon applying a philosophy that believes in human potential rather than supernatural forces, helps individuals self-actualize, promotes values and responsibility for SELF, SOCIETY, & ENVIRONMENT; and creates harmonious communities in which human potential flourishes. This results in happy people doing great things and achieving a tremendous sense of enjoyment and accomplishment in the process (something we all seek). As the story unfolds, a bright progressive group of people in Colorado adopt this new philosophy, become part of the Potentialist Movement, and focus on how to fund and develop this highly advanced community. To meet the challenge, the founder (Freeman Valor Smith) convinces the Hollywood producer (Steven

Spielman) that the story would make a good film, thus ingeniously getting the producer to make the development of the project possible by funding its construction as part of the cost of production. So the project gets underway. But the powerful editor of the local newspaper (Norman Sully) has a deep grudge against the founder and plans to totally disrupt the group's efforts – so he hires an attractive undercover reporter (Serene St. Haven) to infiltrate the group and dig up as much dirt as possible. But a romance ensues between the reporter and the founder that changes the situation dramatically. So the editor takes drastic measures on his own to sabotage the project. What results is an intricate web of romance, treachery, intrigue, and inspiration. With great courage, this resourceful group of Potentialists overcomes all obstacles and a BOLD NEW WORLD is created which shows what people with the right values in the right environment can accomplish.
