Web Design & Development Nicolae Sfetcu, A guide for  
developing web sites by means of conceptualization, planning, modeling, and execution of electronic media delivery via Internet. Web development is a broad term for any activities related to developing a web site for the World Wide Web or an intranet. This can include e-commerce business development, web design, web content development, client-side/server-side coding, and web server configuration. However, among web professionals, web development usually refers only to the non-design aspects of building web sites, e.g. writing markup and coding. Web development can range from developing the simplest static single page of plain text to the most complex web-based internet applications, electronic businesses, or social network services. Web design is a process of conceptualization, planning, modeling, and execution of electronic media delivery via Internet in the form

of Markup language suitable for interpretation by Web browser and display as Graphical user interface (GUI).
