Sustainable Energy for All David Ockwell, Rob Byrne, 2016-08-19 Despite decades of effort and billions of dollars spent, two thirds of people in sub-Saharan Africa still lack access to electricity, a vital pre-cursor to economic development and poverty reduction. Ambitious international policy commitments seek to address this, but scholarship has failed to keep pace with policy ambitions, lacking both the empirical basis and the theoretical perspective to inform such transformative policy aims. Sustainable Energy for All aims to fill this gap. Through detailed historical analysis of the Kenyan solar PV market the book demonstrates the value of a new theoretical perspective based on Socio-Technical Innovation System Building. Importantly, the book goes beyond a purely academic critique to detail exactly how a Socio-Technical Innovation System Building approach might be operationalized in practice, facilitating both a detailed plan for future comparative research as well as a clear agenda for policy and practice. Greener Purchasing Trevor Russel, 2017-09-20 Every organization, public and private, no matter what its size, purchases goods and services. Large organizations also have considerable influence over the practices of their suppliers. As greener purchasing practices have become more common in large organisations, the implications for companies in the supply chain have similarly increased. Yet greener purchasing policies remain the exception rather than the norm in large organizations. Why is this? And how can environmental purchasing practices that have produced tangible business benefits for a number of companies worldwide receive wider take-up? *Greener Purchasing: Opportunities and Innovations* has been published to facilitate the development and dissemination of best practice in environmental supply chain and procurement management worldwide. Divided into four sections, covering The Public Sector, The Private Sector, Innovations and Case Studies, this book brings together international expertise from four continents, including contributions from organisations such as the US EPA, Environment Canada, Procter & Gamble, Xerox and The Body Shop, as well as describing burgeoning new initiatives such as the Japanese and European Green Purchasing Networks. It provides a number of checklists and examples on how to establish and maintain successful greener purchasing and supply chain practices in order to bring not only environmental, but business value to organisations of all sizes. The book is essential reading for purchasing officers, environmental managers, CEOs, consultants, academics and students interested in the topic around the world.

Economic Growth and Environmental Sustainability Paul Ekins, 2002-01-04 A key area of public policy in the last twenty years is the question of how, and how much, to protect the environment. At the heart of this has been the heated debate over the nature of the relationship between economic

growth and environmental sustainability. Is environmental sustainability economic growth or 'green growth', a contradiction in terms? Avoiding the confusion that often surrounds these issues, Ekins provides rigorous expositions of the concept of sustainability, integrated environmental and economic accounting, the Environmental Kuznets Curve, the economics of climate change and environmental taxation. Individual chapters are organised as self-contained, state-of-the-art expositions of the core issues of environmental economics, with extensive cross-referencing from one chapter to another, in order to guide the student or policy-maker through these complex problems. Paul Ekins breaks new ground in defining the conditions of compatibility between economic growth and environmental sustainability, and provides measures and criteria by which the environmental sustainability of economic growth, as it occurs in the real world, may be judged. It is argued that 'green growth' is not only theoretically possible but economically achievable and the authors show what environmental and economic policies are required to achieve this. *Economic Growth and Environmental Sustainability* will be welcomed by students of and researchers in environmental economics and environmental studies, as well as all interested policy-makers.

The CBI Environmental Management Handbook Ruth Hillary, 2016-01-08 A guide to all aspects of environmental management for businesses. Environment, Employment and Development A. S. Bhalla, 1992 This study examines the employment implications of sustainable development, especially for developing countries, and reviews current approaches to minimizing environmental degradation. Spectacular economic growth since 1945, based largely on technological advance, has entailed major environmental costs which, this book claims, cannot be sustained, except at the risk of our own survival.

Tourism: Tourism, development and sustainability Stephen Williams, 2004 This collection of key articles from the most influential journals and books in the field examines what social scientists mean by the term tourism, and what it means to be a tourist. Carefully selected and introduced by the editor, this material charts the sociological changes that have occurred in tourism, and the change from the upper-class grand tours of the late nineteenth-

century to the mass tourism of the present day. The collection also assesses the economic impacts of tourism on local economies, environmental considerations, and whether the growth of tourism is sustainable in a post-September 11th world. *Tourism: Critical Concepts in the Social Sciences* is an accessible and comprehensive resource designed for academics and scholars researching in tourism, globalization, and human geography.

Urban Policy in the European Union Maria Tofarides, 2018-05-08 This title was first published in 2003. This book examines the development of urban policy instruments at the level of the EU primarily by the use of Structural Funds under the European Commission's Directorate-General for Regional Policy. This is the first book-length analysis of the politics of EU urban policy. The first section of the book concentrates on how and why the European

Commission, with no clear mandate from the Treaties for an urban policy, has ventured into this area. The second section examines in detail the implementation of one of these instruments in two specific cases: London and Marseilles. This highlights the role of central, and other levels of government, in policy implementation. The comparison between the cases brings important insights into the differences in local political structures and practices in France and the United Kingdom. The book demonstrates in-depth knowledge and analysis of the policy area and relevant theoretical works. This includes a large volume of published and unpublished materials as well as valuable information obtained through a series of interviews. The findings have general implications for relations between the Commission and localities, particularly the difficulties of involving ordinary people in European issues.

Greening People Walter Wehrmeyer, 2017-09-20 This major collection examines both the human resource dimensions of environmental management and how environmental management impacts on human resource departments. Contributions from international experts in both academia and business look at current theory and best practice in environmental TQM, education, training and communications. *Greening People* argues that, if a company is to adopt an environmentally-aware approach to its activities, the employees are the key to success or failure. Realistically, it is only through the energy, performance and personal commitment of each employee within an organization that business will move towards sustainable industrial development. This book provides an important angle on the new complexities faced by environmental managers and human resource professionals and offers practical solutions drawn from some of the leading lights in the corporate environmental revolution. *Greening People* is divided into four parts. Part 1 demonstrates the relationship between human resource management and environmental management. Part 2 provides insight into the psychological make-up of contemporary staff that may foster or hinder company-wide implementation of environmental measures, and Part 3 addresses the shortcomings of current management training programmes and suggests new approaches for effective implementation of environmental human resource management. Finally, a selection of excellent case studies demonstrates how the concepts are being implemented in companies and local authorities.

Greening the Boardroom Grant Ledgerwood, 2017-09-20 On a world scale, the implicit deal between corporation and community is undergoing a revolution in the period 1990–2000. For the first time, corporate boardrooms are having to confront the environmental challenge not as a peripheral issue around public relations, but as a core issue of credibility with its customers. As trust in big business has declined, consumer willingness to alter buying

behaviour to register disapproval has accelerated. As a result, boardrooms in the largest companies are having to redraw their strategic procedures regarding the environment. This book aims to advance the general understanding of corporate environmental governance as an issue capable of separate and detailed analysis. It aims to provide not an overview, but a series of test cores into the generally unexamined issues surrounding the changing ethos of corporate action and environmental investment. To date, the business and environment strategic conversation has reached only a minute proportion of a global audience. Over the next twenty years, this dialogue will transform business into the 21st century. Moreover, it will become internalised into a way of working within Corporate Culture. Greening the Boardroom explores through case studies and surveys some of the changes in this process, in Europe as well as in Asia and North America. Suitable for readers in general management, business, government and academia, this book is an important contribution to the corporate environmental debate by the author of The Environmental Audit and Business Strategy: A Total Quality Approach.
