*Artificial Intelligence Trends in Intelligent Systems* Radek Silhavy, Roman Senkerik, Zuzana Kominkova Oplatkova, Zdenka Prokopova, Petr Silhavy, 2017-04-06 This book presents new methods and approaches to real-world problems as well as exploratory research that describes novel artificial intelligence applications, including deep learning, neural networks and hybrid algorithms. This book constitutes the refereed proceedings of the Artificial Intelligence Trends in Intelligent Systems Section of the 6th Computer Science On-line Conference 2017 (CSOC 2017), held in April 2017.

**HIV/AIDS in Young Adult Novels** Melissa Gross, Annette Y. Goldsmith, Debi Carruth, 2010 Not long after becoming public health concerns in the 1980s, HIV and AIDS were featured in a number of works of fiction, though such titles were written primarily for adult readers. Mirroring the disease's indiscriminate nature, however, the subject would soon be incorporated into novels aimed at young adults. Despite a need for accessible information on the subject, it is difficult to identify fiction that contains material about HIV/AIDS, as these books are seldom catalogued for this content, nor is this content consistently acknowledged in published reviews. In *HIV/AIDS in Young Adult Novels: An Annotated Bibliography*, the authors address this gap by identifying and assessing the full range of young adult novels that include HIV/AIDS content. This resource is comprised of two major parts. The first part summarizes findings from a content analysis performed on novels written for readers aged 11-19, published since 1981, and featuring at least one character with HIV/AIDS. The second part is an annotated bibliography of the more than 90 novels identified for use in the study. Each entry in the bibliography contains an annotation that summarizes the plot and how HIV/AIDS is depicted in the story, an indication of the accuracy of the HIV/AIDS content, a note on how central HIV/AIDS is to the story, and an evaluation of the literary quality of the book. This work will assist readers in collecting, choosing, evaluating, and using these works to educate readers about HIV/AIDS.

**Electromagnetic Phenomena in Matter** Igor N. Toptygin, 2015-05-04 Modern electrodynamics in different media is a wide branch of electrodynamics which combines the exact theory of electromagnetic fields in the presence of electric charges and currents with statistical description of these fields in gases, plasmas, liquids and solids; dielectrics, conductors and superconductors. It is widely used in physics and in other natural sciences (such as astrophysics and geophysics, biophysics, ecology and evolution of terrestrial climate), and in various technological applications (radio electronics, technology of artificial materials, laser-based technological processes, propagation of bunches of charges particles, linear and nonlinear electromagnetic waves, etc.). Electrodynamics of matter is based on the exact fundamental (microscopic) electrodynamics but is supplemented with specific descriptions of electromagnetic fields in various media using the methods of statistical physics, quantum mechanics, physics of condensed matter (including theory of superconductivity), physical kinetics and plasma physics. This book presents in one unique volume a systematic description of the main electrodynamic phenomena in matter: - A large variety of theoretical approaches used in describing various media - Numerous important manifestations of electrodynamics in matter (magnetic materials, superconductivity, magnetic hydrodynamics, holography, radiation in crystals, solitons, etc.) - A description of the applications used in different branches of physics and many other fields of natural sciences - Describes the whole complexity of electrodynamics in matter including material at different levels. - Oriented towards 3-4 year bachelors, masters, and PhD students, as well as lectures, and engineers and scientists working in the field. - The reader will need a basic knowledge of general physics, higher mathematics, classical mechanics and microscopic (fundamental) electrodynamics at the standard university level - All examples and problems are described in detail in the text to help the reader learn how to solve problems - Advanced problems are marked with one asterisk, and the most advanced ones with two asterisks. Some problems are recommended to be solved first, and are marked by filled dots; they are more general and important or contain results used in other problems.

**Pesticides in the Modern World** Margarita Stoytcheva, 2011-10-03 The present book is a collection of selected original research articles and reviews providing adequate and up-to-date information related to pesticides control, assessment, and toxicity. The first section covers a large spectrum of issues associated with the ecological, molecular, and biotechnological approaches to the understanding of the biological control, the mechanism of the biocontrol agents action, and the related effects. Second section provides recent information on biomarkers currently used to evaluate pesticide exposure, effects, and genetic susceptibility of a number of organisms. Some antioxidant enzymes and vitamins as biochemical markers for pesticide toxicity are examined. The inhibition of the cholinesterases as a specific biomarker for organophosphate and carbamate pesticides is commented, too. The third book section addresses to a variety of pesticides toxic effects and related issues including: the molecular mechanisms involved in pesticides-induced toxicity, fish histopathological, physiological, and DNA changes provoked by pesticides exposure, anticoagulant rodenticides mode of action, the potential of the cholinesterase inhibiting organophosphorus and carbamate pesticides, the effects of pesticides on bumblebee, spiders and scorpions, the metabolic fate of the pesticide-derived aromatic amines, etc.

**Design Methods and Applications for Distributed Embedded Systems** Bernd Kleinjohann, Guang R. Gao, Hermann Kopetz, Lisa Kleinjohann, Achim Rettberg, 2006-04-11 The IFIP TC-10 Working Conference on Distributed and Parallel Embedded Systems (DIPES 2004) brings together experts from industry and academia to discuss recent developments in this important and growing field in the splendid city of Toulouse, France. The ever decreasing price/performance ratio of microcontrollers makes it economically attractive to replace more and more conventional mechanical or electronic control systems within many products by embedded real-time computer systems. An embedded real-time computer system is always part of a well-specified larger system, which we call an intelligent product. Although most intelligent products start out as stand-alone units, many of them are required to interact with other systems at a later stage. At present, many industries are in the middle of this transition from stand-alone products to networked embedded systems. This transition requires reflection and architecting: The complexity of the evolving distributed artifact can only be controlled, if careful planning and principled design methods replace the - hoc engineering of the first version of many standalone embedded products.

**Active Aging** Rocío Fernández-Ballesteros, 2008-10-01 Aging well and continuing to be active are often regarded as THE goals in life, from individual, family, community, and population perspectives. This implies good health and physical fitness, good cognitive and positive emotional-motivational functioning, and social participation and engagement. Increasing life expectancy by means of biomedical advances is not on its own enough, however. Research shows that an individual's psychological condition contributes to their quality of life and well-being in old age - and that behavioral and psychological interventions can also prevent illness, improve cognitive and physical fitness, and increase positive emotional functioning and social participation. This book shows how psychologists and psychological science as a whole can face the challenge of promoting optimal and active aging in a society that is growing ever older.

The Correspondence of Charles S. Peirce and the Open Court Publishing Company, 1890-1913 Stetson J. Robinson, 2022-09-05 This edition includes the letters exchanged between Charles S. Peirce and the Open Court Publishing Company between 1890 and 1913. Open Court published more of Peirce's philosophical writings than any other publisher during his lifetime, and played a critical role in what little recognition and financial income he received during these difficult, yet philosophically rich, years. This correspondence is the basis for much of what is known surrounding Peirce's publications in *The Monist* and *The Open Court*—two of the publisher's most

popular forums for philosophical, scientific, and religious thought—and is therefore referenced heavily in Peirce editions dealing partly or wholly with his later work, including The Essential Peirce series and Writings of Charles S. Peirce. The edition provides for the first time a complete text of this oft-cited correspondence, with textual apparatus, contextual annotation, and careful replications of existential graphs and other complex illustrations. By so doing, this edition sheds critical light not only on Peirce and Open Court, but also on the context, relationships, and concepts that influenced the development of Progressive Era intellectual history and philosophy.

**Economics of the Food Processing Industry** Debdatta Saha,2020-03-14 This book presents a wealth of perspectives on studying the manufacturing end of food processing industries, with a special focus on regions with a low industrial base and multiple missing markets, institutional finance being the most prominent example. Positioning food processing within the industrial ecosystem, which includes entrepreneurs, policymakers, business consultants and associations, the study first considers three different trajectories: for developed economies, for national territories like India, and for sub-national regions like Bihar. In turn, it shows how these trajectories intertwine in two dimensions: the region and the sub-sector. Successfully completing food-processing projects in any of these trajectories requires the identification and development of appropriate product networks that link basic processed items with advanced ones through a chain of value addition. Moreover, the supply-side narrative presented here identifies two types of costs: physical and non-physical costs of operation. For trajectories with skewed firm sizes (“missing middle”) and missing markets, which can be found in Bihar, the latter costs matter just as much as the former in terms of entrepreneurship. While efficiency in operations is studied for selected sub-sectors in Bihar’s food processing to assess the main sources of inefficiency in minimizing the physical costs of operations, non-physical costs are studied using the construct of region-based counterfactual thinking (rCFT) and its relationship with the perception of risk for entrepreneurs. rCFT offers a new concept for understanding the mindset of the entrepreneur, in which the regional identity plays a significant role. The empirical content is based on a primary survey of food processing in Bihar. Additional policy questions, such as the choice between spatial collocation of food parks or cluster-based development of unique sub-sectors, are explored through an analysis of the policy network that supports entrepreneurship. Issues arising from the government’s policy choices, particularly vertically targeted industrial policies, can influence industrial outcomes and are particularly relevant for regions like Bihar. While policy evaluation for Bihar’s processed food industry yields insights on policy targeting for decision-makers in the government, examples of parallel narratives from global experiences in comparable regions shed new light on industrial development in processed food, which should be of interest to business practitioners, academic researchers and policymakers alike.

Metamorphism Ákos Moravánszky,2017-11-20 Materiality is a recurring and central issue in architecture. This book explains how materials are constructed, how they become cultural substances. Metamorphism investigates the complex relationship between natural materials and technology, science and sensuality. Gottfried Semper (1803–1879) made the notion of Stoffwechsel the key element of his theory. With this concept he intended to explain how a structural form originally bound to a method of processing is transferred from one material to another, liberated from its original function. For the first time, the book investigates the subject from a historic point of view whilst reflecting on current interdisciplinary research. Examples from Aalto to Zumthor illustrate the specific aspects of historic and contemporary material concepts.
