Quality of Vision Jack T. Holladay,2007 Good vision is more than 20/20 on a Snellen visual acuity chart. The modern ophthalmologist understands that contrast sensitivity, near and distance vision, performance under light and dark conditions, and the brain's interpretation of input from the sensory apparatus, are all important elements in patients' quality of vision. In *Quality of Vision: Essential Optics for the Ophthalmic Surgeon*, ophthalmologist and optics expert Dr. Jack T. Holladay explores the elements of vision that lie beyond Snellen testing. He explains the Quality of Vision addresses: - Measuring and treating astigmatism in corneal and IOL surgery - The importance of correcting

spherical aberration in cataract and refractive surgery - IOL calculations after refractive surgery - Promising approaches to the correction of presbyopia - Other practical topics the clinician can use every day Recognized as the leader in ophthalmic optics, Dr. Holladay incorporates practical aspects of daily practice into each chapter as he expertly explains the scientific principles, mathematical formulas, and theories behind these important issues. Additionally, Quality of Vision includes numerous color illustrations to provide visual representations of the text's key points. Dr. Holladay discusses what's on everyone's mind: - How to take the best measurements and perform the best calculations to ensure good outcomes in cataract and refractive surgery - How neural adaptation can improve outcomes - How today's excimer laser systems deliver excellent optical correction, and why tomorrow's systems will perform even better Quality of Vision: Essential Optics for the Ophthalmic Surgeon is the most complete and practical reference for ophthalmologists looking to increase their understanding of optical physics and their ability to deliver good vision to their patients after cataract and refractive surgery.

**Making Eye Health a Population Health Imperative** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Public Health Approaches to Reduce Vision Impairment and Promote Eye Health, 2017-01-15 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social

development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

Eye Strain Frederick Earlstein,2015-05-04 In the digital age, with our ever-present smartphones, tablets, game consoles, laptops, desktop computers, and even smart television sets, eye strain - or computer vision syndrome - is more common than ever. Experts tell us that it only takes 2 hours looking at a screen of any kind to put ourselves at risk for eye strain, yet that minimal amount of time is just a drop in a veritable bucket of every day, 21st century screen time. Thankfully, eye strain is not a serious condition, nor is it unavoidable. By taking the time to learn more about the anatomy of the eye, how the structure processes light, and what happens to create eye strain, we can easily manage and overcome its negative effects. With simple, actionable advice to control work space lighting, maintain screens for optimal viewing, and even simply blinking more times an hour, this guide to coping with eye strain can help you work more efficiently while protecting the health of your eyes. Don't fall prey to the myths that abound about what and what does not wear out your eyes. If your mother told you that sitting too close to the screen was bad for you, she was actually wrong. What can be bad for you, however, is failing to realize when your eyes need a break or actual correction to

function at their optimal level. The first step toward managing eye strain is to seek a comprehensive eye exam from a qualified physician who can determine if there are any underlying conditions affecting your vision. Once you have a clean bill of health, and potentially a new prescription for eyeglasses, the rest is in your hands! Written in clear, easy-to-understand language and considering all the many factors that can impact our vision on a day-to-day basis, Eye Strain is a handy guide to managing how you use your eyes - just be sure to read it in good light at the right distance from your face! Eye strain and associated problems, working with eye care professionals, dealing with eye strain, technology and your eyes, and much more all covered!

Eye-Reaction: A Real-Time Video Based on Color Eye-Tracking System for Patients with Disabilities Ahmed Yousify, 2016-01-12 Bachelor Thesis from the year 2014 in the subject Computer Science - Applied, , language: English, abstract: The influence of vision is taking one-step ahead with the introduction of sophisticated eye-tracking and gaze-tracking techniques, which track the movement of the eye and the gaze location to control various applications. This paper describes in detail the low-cost hardware development and the software architecture for a real-time eye tracking based on color system using the open-source image-processing framework of AForge.NET. The designed system uses a USB camera to detect the eye movements and uses EuclideanColorFiltering to filter colors, and then it detects the biggest object between them and gets the location of that object. The system shows to

the patient some question and answers according to the questions, he will look at one of the answers, then, it will be highlighted. By this way, the doctor will know what is wrong with the patient and what should be done to cure him. This provides a highly useful alternative control system for a person suffering from ALS or in Vegetative state of brain stroke. The software system is in Kurdish language and it is designed for the patient in a way to be relaxed and be as simple as possible. Test results on systems on the correct locations and error percentage shows the performance of the developed eye tracking system.
