**Archaeology of Religion in South Asia** Birendra Nath Prasad,2021-06-17 In the religious landscape of early medieval (c. AD 600-1200) Bihar and Bengal, poly-religiosity was generally the norm than an exception, which entailed the evolution of complex patterns of inter-religious equations. Buddhism, Brahmanism and Jainism not only coexisted but also competed for social patronage, forcing them to enter into complex interactions with social institutions and processes. Through an analysis of the published archaeological data, this work explores some aspects of the social history of Buddhist, Brahmanical and Jaina temples and shrines, and Buddhist stūpas and monasteries in early medieval Bihar and Bengal. This archaeological history of religions questions many 'established' textual reconstructions, and enriches our understanding of the complex issue of the decline of Buddhism in this area. *The Bengal Diaspora* Claire Alexander,Joya Chatterji,Annu Jalais,2015-11-06 India's partition in 1947 and the creation of Bangladesh in 1971 saw the displacement and resettling of millions of Muslims and Hindus, resulting in profound transformations across the region. A third of the region's population sought shelter across new borders, almost all of them resettling in the Bengal delta itself. A similar number were internally displaced, while others moved to the Middle East, North America and Europe. Using a creative interdisciplinary approach combining historical, sociological and anthropological approaches to migration and diaspora this book explores the experiences of Bengali Muslim migrants through this period of upheaval and transformation. It draws on over 200 interviews conducted in Britain, India, and Bangladesh, tracing migration and settlement within, and from, the Bengal delta region in the period after 1947. Focussing on migration and diaspora 'from below', it teases out fascinating 'hidden' migrant stories, including those of women, refugees, and displaced people. It reveals surprising similarities, and important differences, in the experience of Muslim migrants in widely different contexts and places, whether in the towns and hamlets of Bengal delta, or in the cities of Britain. Counter-posing accounts of the structures that frame migration with the textures of how migrants shape their own movement, it examines what it means to make new homes in a context of diaspora. The book is also unique in its focus on the experiences of those who stayed behind, and in its analysis of ruptures in the migration process. Importantly, the book seeks to challenge crude attitudes to 'Muslim' migrants, which assume their cultural and religious homogeneity, and to humanize contemporary discourses around global migration. This ground-breaking new research offers an essential contribution to the field of South Asian Studies, Diaspora Studies, and Society and Culture Studies.

**Surge in Solar-Powered Homes** Shahidur R. Khandker,Hussain A. Samad,Zubair K.M. Sadeque,Mohammed Asaduzzaman,Mohammad Yunus,A.K. Enamul Haque,2014-10-20 Bangladesh has the world s fastest growing off-grid solar home system coverage, yet only 10% of mainly rural households have so far benefited. A key policy issue is whether the partial subsidy provided under the current program should be continued and this study highlights how the social benefits far exceed the cost of the subsidy.

Windfall Mckenzie Funk,2015-01-27 A fascinating investigation into how people around the globe are cashing in on a warming world McKenzie Funk has spent the last six years reporting around the world on how we are preparing for a warmer planet. Funk shows us that the best way to understand the catastrophe of global warming is to see it through the eyes of those who see it most clearly—as a market opportunity. Global warming's physical impacts can be separated into three broad categories: melt, drought, and deluge. Funk travels to two dozen countries to profile entrepreneurial people who see in each of these forces a potential windfall. The melt is a boon for newly arable, mineral-rich regions of the Arctic, such as Greenland—and for the surprising kings of the manmade snow trade, the Israelis. The process of desalination, vital to Israel's survival, can produce a snowlike by-product that alpine countries use to prolong their ski season. Drought creates opportunities for private firefighters working for insurance companies in California as well as for fund managers backing south Sudanese warlords who control local farmland. As droughts raise food prices globally, there is no more precious asset. The deluge—the rising seas, surging rivers, and superstorms that will threaten island nations and coastal cities—has been our most distant concern, but after Hurricane Sandy and failure after failure to cut global carbon emissions, it is not so distant. For Dutch architects designing floating cities and American scientists patenting hurricane defenses, the race is on. For low-lying countries like Bangladesh, the coming deluge presents an existential threat. Funk visits the front lines of the melt, the drought, and the deluge to make a human accounting of the booming business of global warming. By letting climate change continue unchecked, we are choosing to adapt to a warming world. Containing the resulting surge will be big business; some will benefit, but much of the planet will suffer. McKenzie Funk has investigated both sides, and what he has found will shock us all. To understand how the world is preparing to warm, Windfall follows the money.

*From Temple to Museum* Salila Kulshreshtha,2017-10-05 Religious icons have been a contested terrain across the world. Their implications and understanding travel further than the artistic or the aesthetic and inform contemporary preoccupations.This book traces the lives of religious sculptures beyond the moment of their creation. It lays bare their purpose and evolution by contextualising them in their original architectural or ritual setting while also following their displacement. The work examines how these images may have moved during different spates of temple renovation and acquired new identities by being relocated either within sacred precincts or in private collections and museums, art markets or even desecrated and lost. The book highlights

contentious issues in Indian archaeology such as renegotiating identities of religious images, reuse and sharing of sacred space by adherents of different faiths, rebuilding of temples and consequent reinvention of these sites. The author also engages with postcolonial debates surrounding history writing and knowledge creation in British India and how colonial archaeology, archival practices, official surveys and institutionalisation of museums has influenced the current understanding of religion, sacred space and religious icons. In doing so it bridges the historiographical divide between the ancient and the modern as well as socio-religious practices and their institutional memory and preservation. Drawn from a wide-ranging and interdisciplinary study of religious sculptures, classical texts, colonial archival records, British travelogues, official correspondences and fieldwork, the book will interest scholars and researchers of history, archaeology, religion, art history, museums studies, South Asian studies and Buddhist studies.

*The Ultimate Modern Guide to Artificial Intelligence* Enamul Haque,2020-07-21 The era of artificial intelligence has arrived. You, who only felt far from artificial intelligence, and the growing dream trees, are now inseparable from artificial intelligence. What does AI have to do with me? Isn't it a distant future that has nothing to do with me, not a scientist, a technician, or a computer programmer? Well, Artificial intelligence is not a story of someone who has nothing to do with it, but the fact is, it is now everyone's story. AI is already deeply infiltrating everyone's life. The question is no longer whether we use technology or not; it's about working together in a better way. Surrounding technologies like Siri, Alexa, or Cortana are seamlessly integrated into our interactions. We walk into the room, turn on the lights, play songs, change the room temperature, keep track of shopping lists, book a ride at the airport, or remind ourselves to take the proper medication on time. It is now necessary to look at artificial intelligence from a broader and larger perspective. You should not just hang on to complex deep learning algorithms and think only through science and technology but through the eyes of emotions and humanities. These days, elementary school students learn English and coding at school. Tomorrow's elementary school students will learn AI. Of course, not everyone needs to be an AI expert. But if you don't understand AI, you will be left out of the trend of changing times. AI comes before English and coding. This is because artificial intelligence is the language and tool of the future. This book opens your door to the most critical understanding needed of AI and other relevant disruptive technologies. Artificial intelligence will significantly change societal structures and the operations of companies. The next generation of employees needs to be trained as a workforce before entering the job market, and the existing workforce is regularly recharged and skilled. There is plenty on this for reskilling too. This is the most definitive compendium of AI, The Internet of Things, Machine Learning, Deep Learning, Data Science, Big Data, Cloud Computing, Neural networks, Robotics, the future of work and the future of intelligent industries.
