Mongolic Elements in Tuvan Bayarma Khabtagaeva,2009 Tuvan is one of the archaic Turkic languages. A powerful Mongolic influence means that it possibly also has more Mongolic elements than other Turkic languages. Results of the present work are based on a database of approximately 1500 Mongolic loanwords. After confirming the Mongolic origin of these words in Tuvan, etymological, phonetical and morphological aspects are listed to assure, when and from which Mongolian language the loanword was taken. The study demonstrates the powerful Mongolic influence on Tuvan and establishes what linguistic criteria are available to characterize and classify the Mongolic loanwords. Accordingly an earlier and a later layer are distinguished. The later layer further comprises three groups of loanwords, the Buryat, Khalkha and Oirat ones.

The Things That Nobody Knows William Hartston,2013-04-01 A playful and diverting, yet always scientifically rigorous look at those simple mysteries that are yet to be solved Why are so many giraffes gay? Has human evolution stopped? Where did our alphabet come from? Can robots become self-aware? Can lobsters recognize other lobsters by sight? What goes on inside a black hole? Are cell phones bad for us? Why can't we remember anything from our earliest years? Full of the mysteries of life, the universe, and everything, this is a fascinating and unputdownable exploration of the limits of human knowledge of our planet, its history and culture, and the universe beyond.

The Song Of The Dodo David Quammen,2012-03-31 Why have island ecosystems always suffered such high rates of extinction? In our age, with all the world's landscapes, from Tasmania to the Amazon to Yellowstone, now being carved into island-like fragments by human activity, the implications of this question are more urgent than ever. Over the past eight years, David Quammen has followed the threads of island biogeography on a globe-encircling journey of discovery.

Late Geometric and Protoattic Pottery, Mid 8th to Late 7th Century B.C. Eva T. H. Brann,1962 This volume reports on Athenian pottery found in the Athenian Agora up to 1960 that can be dated from about the middle of the 8th century B.C., when the appearance of a painter of sufficient personal distinction to enliven the whole craft marks a real break from the earlier Geometric style, through the third quarter of the 7th century B.C. when Protoattic gives way to black-figure and black wares. A sampling of contemporary imported ware is included. The material is treated first by shape and then, more extensively, by painting styles. Some 650 characteristic pieces are selected for cataloguing. The introduction discusses the development of the various shapes and styles, characterizing the special techniques and innovations of the period. The topographical features of the Agora that are

indicated by the places of discovery of deposits of late Geometric and Protoattic pottery are summarized under wells, houses, workshops, sanctuaries, cemeteries, and roads.

Istanbul Was a Fairy Tale Mario Levi,2012-04-24 A major work of contemporary Turkish literature, *Istanbul Was a Fairy Tale* tells the stories of three generations of a Jewish family from the 1920s to the 1980s. Istanbul is their only home, and yet they live in a state of alienation, isolating themselves from the world around them. As witness, observer, and protagonist, the narrator—at once inside and outside of his story—records their many tales, as well as those of their friends and neighbors, creating an expansive mosaic of characters, each doing their best to survive the twentieth century.

Arctic Dreams Barry Lopez,2013-06-25 This New York Times–bestselling exploration of the Arctic, a National Book Award winner, is “one of the finest books ever written about the far North” (Publishers Weekly). “The nation’s premier nature writer” travels to a landscape at once barren and beautiful, perilous and alluring, austere yet teeming with vibrant life, and shot through with human history (San Francisco Chronicle). The Arctic has for centuries been a destination for the most ambitious explorers—a place of dreams, fears, and awe-inspiring spectacle. This “dazzling” account by the author of *Of Wolves and Men* takes readers on a breathtaking journey into the heart of one of the world’s last frontiers (The New York Times). Based on Barry Lopez’s years spent traveling the Arctic regions in the company of Eskimo hunting parties and scientific expeditions alike, *Arctic Dreams* investigates the unique terrain of the human mind, thrown into relief against the vastness of the tundra and the frozen ocean. Eye-opening and profoundly moving, it is a magnificent appreciation of how wilderness challenges and inspires us. Renowned environmentalist and author of *Desert Solitaire* Edward Abbey has called *Arctic Dreams* “a splendid book . . . by a man who is both a first-rate writer and an uncompromising defender of the wild country and its native inhabitants”—and the New Yorker hails it as a “landmark” work of travel writing. A vivid, thoughtful, and atmospheric read, it has earned multiple prizes, including the National Book Award, the Christopher Medal, the Oregon Book Award, and a nomination for the National Book Critics Circle Award. This ebook features an illustrated biography of Barry Lopez including rare images and never-before-seen documents from the author’s personal collection.

Matter and Meaning Michael Fuller,2010-02-19 We live in a material world. But what is matter? Can it point us towards meanings outside itself, or can any meaning it possesses only be invested in it by human beings? To what extent might these semantic activities overlap? How have our current understandings of matter and meaning developed from those of past thinkers, in both Western and non-Western contexts? These and many other questions were addressed at a conference held under the auspices of the Science and Religion Forum at Liverpool Hope University in 2008. That conference brought together some leading figures in the disciplines of theology and the natural sciences, and a selection of the papers given at it is now presented in this book. They offer important new historical, scientific and theological insights from a variety of perspectives to those with an interest in the fast-developing area of the dialogue between these disciplines; and they will also be found valuable by anyone who wishes to explore the complexities of this dialogue, as it moves beyond the black-and-white histrionics of its presentation in the popular media.

Natural Acts: A Sidelong View of Science and Nature David Quammen,2009-03-30 David Quammen is simply the best natural essayist working today.--Tim Cahill, author of *Lost in My Own Backyard* Lively writing about science and nature depends less on the offering of good answers, I think,

than on the offering of good questions, said David Quammen in the original introduction to *Natural Acts*. For more than two decades, he has stuck to that credo. In this updated version of curiosity leads him from New Mexico to Romania, from the Congo to the Amazon, asking questions about mosquitoes (what are their redeeming merits?), dinosaurs (how did they change the life of a dyslexic Vietnam vet?), and cloning (can it save endangered species?). This revised and expanded edition best-loved *Natural Acts* columns, which first appeared in *Outside* magazine in the early 1980s, and includes recent pieces such as *Planet of Weeds*, an influential new *Natural Acts* is an eye-opening journey that will please both Quammen fans and newcomers to his work. Song lyrics have been redacted from this ebook owing to permissions issues.

Mass Extinctions and Their Aftermath A. Hallam, P. B. Wignall, 1997-09-11 The first book to review all the evidence concerning both the dinosaur extinctions and all the other major extinctions - of plant, animal, terrestrial, and marine life - in the history of life. All the extinction mechanisms are critically assessed, including meteorite impact, anoxia, and volcanism. - ;Why do mass extinctions occur? The demise of the dinosaurs has been discussed exhaustively, but has never been put into the context of other extinction events. This is the first systematic review of the mass extinctions of all organisms, plant and animal, terrestrial and marine, that have occurred in the history of life. This includes the major crisis 250 million years ago which nearly wiped out all life on Earth. By examining current paleontological, geological, and sedimentological evidence of environmental changes, the cases for explanations based on climate change, marine regressions, asteroid or comet impact, anoxia, and volcanic eruptions are all critically evaluated. -
