Shareware Heroes Richard Moss,2023-01-10 Shareware Heroes is a comprehensive, meticulously researched exploration of an important and too-long overlooked chapter in video game history Shareware Heroes: Independent Games at the Dawn of the Internet takes readers on a journey, from the beginnings of the shareware model in the early 1980s, the origins of the concept, even the name itself, and the rise of shareware's major players – the likes of id Software, Apogee, and Epic MegaGames – through to the significance of shareware for the ‘forgotten’ systems – the Mac, Atari ST, Amiga – when commercial game publishers turned away from them. This book also charts the emergence of commercial shareware distributors like Educorp and the BBS/newsgroup sharing culture. And it explores how shareware developers plugged gaps in the video gaming market by creating games in niche and neglected genres like vertically-scrolling shoot-'em-ups (e.g. Raptor and Tyrian) or racing games (e.g. Wacky Wheels and Skunny Kart) or RPGs (God of Thunder and Realmz), until finally, as the video game market again grew and shifted, and major publishers took control, how the shareware system faded into the background and fell from memory.

Effects of Computer-Based Cooperative Learning on the Problem Solving Skills of Grade Six Students Steven Poris,2000-08-01 This study was designed to determine if sixth-grade students' problem solving skills were improved by means of their experience with a computer-based logical puzzle game designed to increase reasoning skills, and, in turn, problem solving ability. Students worked on this game either in cooperative learning pairs or alone. Baseline and post-experimental problem-solving ability was measured through the administration of a Problem Solving Test; Form A was utilized as a pretest for this purpose, Form B was used as a post-test. Comparisons of problem-solving ability based upon post-test scores (Form B) were made among four groups of students (N = 106): Group 1: Students (n = 26) who worked on the computer-based puzzle game in cooperative learning pairs Group 2: Students (n = 27) who worked on the computer-based puzzle game as individuals Group 3: Students (n = 24) who worked on a computer-based social studies simulation in cooperative learning pairs Group 4: Students (n = 29) who worked on a computer-based social studies simulation as individuals. A t-test comparison of post-test data between all students who worked on the puzzle game and all students who did not work on the puzzle game showed no significant difference between the two groups' problem solving abilities. However, an analysis of variance comparing the means of all four groups showed that the students in Group 1 performed significantly better ($F=3.783$, p
