Beautiful, Simple, Exact, Crazy Apoorva Khare, Anna Lachowska, 2015-08-25 In this vibrant work, which is ideal for both teaching and learning, Apoorva Khare and Anna Lachowska explain the mathematics essential for understanding and appreciating our quantitative world. They show with examples that mathematics is a key tool in the creation and appreciation of art, music, and literature, not just science and technology. The book covers basic mathematical topics from logarithms to statistics, but the authors eschew mundane finance and probability problems. Instead, they explain how modular arithmetic helps keep our online transactions safe, how logarithms justify the twelve-tone scale commonly used in music, and how transmissions by deep space probes are similar to knights serving as messengers for their traveling prince. Ideal for coursework in introductory mathematics and requiring no knowledge of calculus, Khare and Lachowska's enlightening mathematics tour will appeal to a wide audience.

The Origins of Economic Growth Arvid Aulin, 2012-12-06 Dealing with factors affecting economic growth in knowledge-based societies, the author shows that the interaction between material and nonmaterial values is the ultimate source of all economic growth. The model thus developed predicts the quantitative facts concerning business cycles better than the conventional real-cycle models, while also producing a new growth path whose existence is verified by empirical facts. The results provide strong evidence of the economic relevance of nonmaterial values, and also prompt a new view of the stochastic elements in the business cycles.

Theorem Proving in Higher Order Logics Stefan Berghofer, Tobias Nipkow, Christian Urban, Makarius Wenzel, 2009-08-04 This volume constitutes the proceedings of the 22nd International Conference on Theorem Proving in Higher Order Logics (TPHOLs 2009), which was held during August 17-20, 2009 in Munich, Germany. TPHOLs covers all aspects of theorem proving in higher order logics as well as related topics in theorem proving and verification. There were 55 papers submitted to TPHOLs 2009 in the full research category, each of which was refereed by at least three reviewers selected by the Program Committee. Of these submissions, 26 research papers and 1 proof pearl were accepted for presentation at the conference and publication in this volume. In keeping with longstanding tradition, TPHOLs 2009 also offered a venue for the presentation of emerging trends, where researchers invited discussion by means of a brief introductory talk and then discussed their work at a poster session. A supplementary proceedings volume was published as a 2009 technical report of the Technische Universität München. The organizers are grateful to David Basin, John Harrison and Wolfram Schulte for agreeing to give invited talks. We also invited four tool developers to give tutorials about their systems. The following speakers kindly accepted our invitation and we are grateful to them: John Harrison (HOL Light), Adam Naumowicz (Mizar), Ulf Norell (Agda) and Carsten Schürmann (Twelf).

Vagueness in the Exact Sciences Apostolos Syropoulos, Basil K. Papadopoulos, 2021-09-07 The book starts with the assumption that vagueness is a fundamental property of this world. From a philosophical account of vagueness via the presentation of alternative mathematics of vagueness, the subsequent chapters explore how vagueness manifests

itself in the various exact sciences: physics, chemistry, biology, medicine, computer science, and engineering.

Exact Analysis of Discrete Data Karim F. Hirji,2005-11-18 Researchers in fields ranging from biology and medicine to the social sciences, law, and economics regularly encounter variables that are discrete or categorical in nature. While there is no dearth of books on the analysis and interpretation of such data, these generally focus on large sample methods. When sample sizes are not large or the data are

Exact Renormalization Group, The - Proceedings Of The Workshop Alexander Krasnitz,Yuri A Kubyshin,Robertus Potting,P Sa,1999-08-13 The subject of the exact renormalization group started from pioneering work by Wegner and Houghton in the early seventies and, a decade later, by Polchinski, who formulated the Wilson renormalization group for field theory. In the past decade considerable progress has been made in this field, which includes the development of alternative formulations of the approach and of powerful techniques for solving the exact renormalization group equations, as well as widening of the scope of the exact renormalization group method to include fermions and gauge fields. In particular, two very recent results, namely the manifestly gauge-invariant formulation of the exact renormalization group equation and the proof of the c-theorem in four dimensions, are presented in this volume.

Exact Statistical Inference for Categorical Data Guogen Shan,2016-01-22 Exact Statistical Inference for Categorical Data discusses the way asymptotic approaches have been often used in practice to make statistical inference. This book introduces both conditional and unconditional exact approaches for the data in 2 by 2, or 2 by k contingency tables, and is an ideal reference for users who are interested in having the convenience of applying asymptotic approaches, with less computational time. In addition to the existing conditional exact inference, some efficient, unconditional exact approaches could be used in data analysis to improve the performance of the testing procedure. Demonstrates how exact inference can be used to analyze data in 2 by 2 tables Discusses the analysis of data in 2 by k tables using exact inference Explains how exact inference can be used in genetics

Fuzziness and Foundations of Exact and Inexact Sciences Kofi Kissi Dompere,2012-08-23 The monograph is an examination of the fuzzy rational foundations of the structure of exact and inexact sciences over the

epistemological space which is distinguished from the ontological space. It is thus concerned with the demarcation problem. It examines exact science and its critique of inexact science. The role of fuzzy rationality in these examinations is presented. The driving force of the discussions is the nature of the information that connects the cognitive relational structure of the epistemological space to the ontological space for knowing. The knowing action is undertaken by decision-choice agents who must process information to derive exact-inexact or true-false conclusions. The information processing is done with a paradigm and laws of thought that constitute the input-output machine. The nature of the paradigm selected depends on the nature of the information structure that is taken as input of the thought processing. Generally, the information structure received from the ontological space is defective from the simple principles of acquaintances and the limitations of cognitive agents operating in the epistemological space. How then do we arrive and claim exactness in our knowledge-production system? The general conclusion of this book is that the conditions of the fuzzy paradigm with its laws of thought and mathematics present a methodological unity of exact and inexact sciences where every zone of thought has fuzzy covering.

The Human Origins Valentin Matcas,1901 There is more to the human origins, development, intelligence, and civilization, than the epic debate Creationism versus Evolution, simply because there is more to the human condition than what authorities and ideologies want you to believe. Therefore, when you study the human origins,

you have to search beyond the moment when the first humans had detached from the firmament or previous species, since there are other significant events in humanity's lifespan and achievement defining its specific timeline. While you have to study everything, otherwise you risk understanding these significant events only from simplistic empirical or ideological perspectives, ending up learning what you already know, while following the crowd throughout unending debates. Since you want the accurate truth, because you already know all theories, beliefs, speculations, and debates regarding the human origins. And this is why, when you study the human origins, you expect to understand everything about the origins of life, the nature and origins of this world, the nature of the human higher self and intelligence, the origins and debut of the human consciousness and human intelligent reasoning, along with all details related to the Creator of this entire world, of Life, and of humanity. Additionally, it is relevant to know how all these affect you personally, and how they affect your family, your genetic line, and your nation, how your family and genetic line originate, where and how it happened, under what circumstances, and with what status and privileges for you, for your family, for your nation, and for the humankind. And this is exactly what we cover throughout this book, in all details and from all perspectives. This book studies the human origins, along with the origins of life, human intelligence, human species, human development, human society, human current civilization along with various past civilizations of Earth, integrating humans, their origins, and their original and current conditions in an elaborate comprehensive model.
