Observation of the Earth and Its Environment Herbert J. Kramer,2019-01-30 This book is about spaceborne missions and instruments. In addition, surveys of airborne missions and of campaigns can be found on the accompanying CD-ROM in pdf-format. Compared with the 3rd edition the spaceborne part grew from about 300 to 1000 pages. The complete text - including the electronic-only chapters - contains more than 1900 pages. New chapters treat the history of Earth observation and university missions. The number of commercial Earth imaging missions has grown significantly. A chapter contains reference data and definitions. Extensive appendices provide a comprehensive glossary, acronyms and abbreviations and an index of sensors. An effort has been made to present the information in context, to point out relationships and interconnections. The book may serve as a reference and guide to all involved in the various national and international space programs: researchers and managers, service providers and data users, teachers and students.

**Biology in Transition** Martin Luck,2018-05-21 Arthur Milnes Marshall was a 19th-century scientist who gave lectures addressing the biological debates of his time. They covered topics including evolution, embryology, development and inheritance, with Charles Darwin's name and those of other important biologists distributed liberally throughout. Marshall was a zoologist, embryologist, anatomist and Darwin enthusiast, as well as an accomplished mountaineer and sportsman. He was a humanist, an admired academic teacher and brilliant public educator. The lectures reveal his passion for communicating his subject, to his students and to the working men and women of Manchester, and they provide a remarkable snapshot of the state of biological science at the close of the 19th century. His death in 1893 aged only 41, on a climbing expedition in the Lake District, left a fascinating time capsule in the form of lectures from a critical transitional period in the history of biology. Evolution by natural selection was the established doctrine but genes were undefined, with Mendel's work yet to be recognised. Embryology was suggesting recapitulation but ancestry, genetics and missing links awaited liberation from theoreticians and the stones of palaeontology. Microscopy was flourishing and cell science was finding its feet, but DNA and molecular science were far in the future. Had Marshall lived and worked into the 20th century, these lectures would undoubtedly have been superseded and forgotten. Instead, they reveal biology's transformation from a descriptive exercise to an experimental science, its rejection of purpose and design in evolution, and the shift of its axis from continental Europe to Britain and the United States. Professor Martin Luck discovered these lectures (published by CF Marshall in two volumes shortly after his brother's death) languishing in a university corridor. His careful curation, introductions to each lecture and copious annotations on the organisms, theories and scientists discussed, illuminate their significance as prequels to modern biology. Marshall's own story brings the lectures and their social context into sharp relief. Biology in Transition will interest anyone curious about the history of science, especially biology, evolution, genetics and its 19th-century pioneers.

**Application Development for IBM CICS Web Services** O'Grady James,Ian Burnett,Jim Harrison,San Yong Liu,Xue Yong Zhang,IBM Redbooks,2015-01-27 This IBM® Redbooks® publication focuses on developing Web service applications in IBM CICS®. It takes the broad view of developing and modernizing CICS applications for XML, Web services, SOAP, and SOA support, and lays out a reference architecture for developing these kinds of applications. We start by discussing Web services in general, then review how CICS implements Web services. We offer an overview of different development approaches: bottom-up, top-down, and meet-in-the-middle. We then look at how you would go about exposing a CICS application as a Web service provider, again looking at the different approaches. The book then steps through the process of creating a CICS Web service requester. We follow this by looking at CICS application aggregation (including 3270 applications) with IBM Rational® Application Developer for IBM System z® and how to implement CICS Web Services using CICS Cloud technology. The first part is concluded with hints and tips to help you when implementing this technology. Part two of this publication provides performance figures for a basic Web service. We investigate some common variables and examine their effects on the performance of CICS as both a requester and provider of Web services.

**IBM CICS and the JVM server: Developing and Deploying Java Applications** Chris Rayns,George Bogner,Tony Fitzgerald,Elisabetta Flamini,Jun Hua Gao,Ivan D Hargreaves,Phil Wakelin,Hongtao Wen,Bai Chun Zhou,IBM Redbooks,2013-07-15 This IBM® Redbooks® publication provides information about the new Java virtual machine (JVM) server technology in IBM CICS® Transaction Server for z/OS® V4.2. We begin by outlining the many advantages of its multi-threaded operation over the pooled JVM function of earlier releases. The Open Services Gateway initiative (OSGi) is described and we highlight the benefits OSGi brings to both development and deployment. Details are then provided about how to configure and use the new JVM server environment. Examples are included of the deployment process, which takes a Java application from the workstation Eclipse integrated development environment (IDE) with the IBM CICS Explorer® software development kit (SDK) plug-in, through the various stages up to execution in a stand-alone CICS region and an IBM CICSplex® environment. The book continues with a comparison between traditional CICS programming, and CICS programming from Java. As a result, the main functional areas of the Java class library for CICS (JCICS) application programming interface (API) are extensively reviewed. Further chapters are provided to demonstrate interaction with structured data such as copybooks, and how to access relational databases by using Java Database Connectivity (JDBC) and Structured Query Language for Java (SQLJ). Finally, we devote a chapter to the migration of applications from the pooled JVM model to the new JVM server run time.

**Tools for High Performance Computing 2009** Matthias S. Müller,Michael M. Resch,Alexander Schulz,Wolfgang E. Nagel,2010-05-27 As more and more hardware platforms support parallelism, parallel programming is gaining momentum. Applications can only leverage the performance of multi-core processors or graphics processing units if they are able to split a problem into smaller ones that can be solved in parallel. The challenges emerging from the development of parallel applications have led to the development of a great number of tools for debugging, performance analysis and other tasks. The proceedings of the 3rd International Workshop on Parallel Tools for High Performance Computing provide a technical overview in order to help engineers, developers and computer scientists decide which tools are best suited to enhancing their current development processes.
