Femtosecond Cataract Surgery Louis E. Probst, Clara C. Chan, 2012 Femtosecond cataract surgery is the next step in the evolution of cataract surgery. In *Femtosecond Cataract Surgery: A Primer*, Dr. Louis E. Probst and Dr. Clara C. Chan lead the way by bringing together current technology and clinical experience to provide a concise yet comprehensive overview on this ground-breaking technique. *Femtosecond Cataract Surgery: A Primer* is composed of clinical chapters written by 18 of the world's leading experts who have pioneering, hands-on experience performing the procedure paired with chapters on the technology of each of the 4 current systems. Intraoperative and clinical photographs further showcase the most up-to-date techniques and clinical experiences in each of the systems, as well as illustrations of their unique and common characteristics. Features include the following: - New data presented in a companion table format to evaluate the different technologies - Consistent representation of each system - First-hand knowledge from expert international surgeons Additionally, a comparison table has been constructed with the most recent information offering clear differentiation on the techniques and technologies of each system. The table also tracks each system's progression in the approval system in the United States and Europe. The final chapter in *Femtosecond Cataract Surgery: A Primer* serves as an update on the current investigations of presbyopia treatment with femtosecond lasers. Providing a wealth of new data in a concise and organized format, *Femtosecond Cataract Surgery: A Primer* is an indispensable resource for ophthalmologists, cataract surgeons, optometrists, and other professionals in the eye care industry.

MCQs for FRCOphth part 2 Darren S. J Ting, David Steel, 2020-05-12 MCQs for FRCOphth Part 2 is a key resource for candidates preparing to sit the Royal College of Ophthalmologists examination. Written by experts in the field, it is carefully mapped to the RCOphth curriculum, providing comprehensive preparation for all aspects of this challenging exam. Written for the new FRCOphth format, it contains 360 questions organised into five sections to reflect the subdivisions of the exam. A mock examination of 90 questions enables trainees to assess their level of knowledge, and practise the technique and approach needed for the examination. In addition to a small ratio of illustration based questions to reflect the real FRCOphth exam it also places an emphasis on areas that are not well covered in other materials, such as GMC and RCOphth guidelines. All answers are accompanied by detailed explanations and relevant further reading sources, providing candidates with high-quality self-assessment. Offering a true test of the reader's ophthalmology knowledge, this is a must-buy for anyone preparing for the FRCOphth part 2 written exam.

Clinical Medicine in Optometric Practice Bruce Muchnick, 2007-10-24 This updated new edition is a practical guide to the evaluation, diagnosis, and treatment of systemic disorders as they relate to primary eye care. It incorporates a multidisciplinary approach, from the underlying pathophysiological mechanisms, to testing and diagnosis methods, to medical and surgical management. *Clinical Medicine in Optometric Practice*, 2nd Edition provides the reader with the information needed to make informed decisions about patient management, such as identifying symptoms and their related disorders, and knowing when to refer patients to a medical specialist. Shows how the wide range of medical conditions and their therapeutic strategies impact the delivery of eye care. Familiarizes the reader with the conditions that are encountered in practice, those that may

present with ocular manifestations, and those that have significant importance to medicine in general. Organized in a practical, easily accessible format. Uses case presentations to demonstrate clinical test interpretation, differential diagnosis, treatment, and the development of a prognosis. Reflects the most current technologies in examination and testing. Features all-new illustrations in full color, illustrating systemic disorders, the physical exam, videotaping, dermatological conditions, and much more. Includes a new chapter on vascular disease, especially important since optometrists are sometimes the first to notice these types of changes. Contains new information on cardiovascular disease and carotid disease, including the effects that stroke may have on the patient.

Ocular Manifestations of Systemic Disease Bernard H. Blaustein, 1994
Featuring prototypical case presentations as the focus of each discussion, this text analyzes the ocular manifestations of systemic disease in a manner that is clinically relevant to the practicing optometrist. Emphasis is placed on pertinent tests and procedures that the clinician should perform to establish a differential diagnosis. Each chapter ends with an editorial comment that summarizes the salient points of the case and presents any existing controversies.

Irregular Astigmatism Tracy Schroeder Swartz, 2008
Since the advent of keratorefractive surgery and its rising popularity, irregular astigmatism has become an increasingly important issue for ophthalmologists and optometrists. Despite the success of LASIK and PRK, there are more and more patients experiencing visual quality problems due to the non-physiological modification of the corneal structure. Among these complications, irregular astigmatism is perhaps the most difficult to treat. Every physician who performs keratorefractive surgery understands that in reducing a patient's refractive error, there is a possibility of creating irreversible effects on visual quality. This text is intended to help prevent and reduce the iatrogenic creation of irregular astigmatism, as well as provide effective treatment when postoperative complications do arise. With the maturation of keratorefractive technology in recent years, effective treatment for iatrogenic irregular astigmatism is quickly developing. It provides everything refractive surgeons, ophthalmologists, and optometrists need to know about this important topic.

Diseases of the Vitreo-Macular Interface Aniz Girach, Marc D. de Smet, 2016-10-01
This clinically oriented book is the first to be devoted wholly to the diagnosis and treatment of vitreo-macular interface disease, characterized by a combination of vitreo-macular adhesion (VMA) and vitreo-macular traction (VMT) that is implicated in a variety of disorders. World-renowned experts in the field discuss epidemiologic, anatomic, and physiologic aspects, document the findings obtained with newer imaging techniques, such as spectral domain optical coherence tomography, describe the treatment options, and report on the results of preclinical and clinical trials, including some previously unpublished findings. This book will prove invaluable for ophthalmologists as we advance toward a future in which treatments of diseases such as age-related macular degeneration and diabetic retinopathy will likely require adjunctive therapy to tackle VMA/VMT concurrently.

Surgical Retina Francesco Bandello, Maurizio Battaglia Parodi, 2012
An update on the essentials of retina surgery In the new book series 'ESASO Course Series', the essentials of the courses of the European School for Advanced Studies in Ophthalmology (ESASO) are made available to interested ophthalmologists, optometrists, technicians and residents all over the world. In this volume, the seminars on surgical retina presented by renowned experts during ESASO's activities are collected. Many specialists have contributed their knowledge to make this volume a device to give practical support. The topics range from prevention to state-of-the-art diagnostic techniques and the latest surgical treatment options for many eye conditions such as

diabetic retinopathy and rhegmatogenous retinal detachment. This publication provides the ophthalmologist with the main aspects of surgical retina in a simple and practical update.

Medical Retina Frank G Holz, Richard F. Spaide, 2010-03-18 Recent advances in ophthalmic imaging technology have revolutionized fundus examination and contributed significantly in elucidating the pathophysiology of retinal diseases and improving their diagnosis and treatment. It is therefore fitting that this detailed full-color textbook in the Medical Retina series is devoted to ocular imaging. The volume reviews in detail the role of both established and novel forms of imaging, and is designed to be of benefit to clinicians and researchers alike. All of the chapters have been written by internationally recognized experts at the forefront of their fields. The result is a comprehensive, state-of-the-art overview of retinal imaging that should prove informative and useful for everyone interested in the retina. Topics include: •Spectral domain optical coherence tomography (SD-OCT) of macular diseases •Comparison of OCT equipment •Simultaneous SD-OCT and confocal SLO imaging •Ultra-widefield imaging •Autofluorescence imaging •Near-infrared imaging •Macular pigment imaging •Metabolic mapping •Imaging of the choroid •Imaging the vitreous and the vitreoretinal interface with SD-OCT •New developments in OCT technology •Molecular imaging
