Network Models in Population Biology E. R. Lewis, 2012-12-06 This book is an outgrowth of one phase of an upper-division course on quantitative ecology, given each year for the past eight at Berkeley. I am most grateful to the students in that course and to many graduate students in the Berkeley Department of Zoology and Colleges of Engineering and Natural Resources whose spirited discussions inspired much of the book's content. I also am deeply grateful to those faculty colleagues with whom, at one time or another, I have shared courses or seminars in ecology or population biology, D.M. Auslander, L. Demetrius, G. Oster, O.H. Paris, F.A. Pitelka, A.M. Schultz, Y. Takahashi, D.B. Tyler, and P. Vogelhut, all of whom contributed substantially to the development of my thinking in those fields, to my Departmental colleagues E. Polak and A.J. Thomasian, who guided me into the literature on numerical methods and stochastic processes, and to the graduate students who at one time or another have worked with me on population-biology projects, L.M. Brodnax, S-P. Chan, A. Elterman, G.C. Ferrell, D. Green, C. Hayashi, K-L. Lee, W.F. Martin Jr., D. May, J. Stamnes, G.E. Swanson, and I. Weeks, who, together, undoubtedly provided me with the greatest inspiration. I am indebted to the copy-editing and production staff of Springer-Verlag, especially to Ms. M. Muzeniek, for their diligence and skill, and to Mrs. Alice Peters, biomathematics editor, for her patience.

Artificial Neural Networks: Formal Models and Their Applications - ICANN 2005 Wlodzislaw Duch, Erkki Oja, Slawomir Zadrozny, 2005-08-25 This volume is the first part of the two-volume proceedings of the International Conference on Artificial Neural Networks (ICANN 2005), held on September 11-15, 2005 in Warsaw, Poland, with several accompanying workshops held on September 15, 2005 at the Nicolaus Copernicus University, Toru, Poland. The ICANN conference is an annual meeting organized by the European Neural Network Society in cooperation with the International Neural Network Society, the Japanese Neural Network Society, and the IEEE Computational Intelligence Society. It is the premier European event covering all topics concerned with neural networks and related areas. The ICANN series of conferences was initiated in 1991 and soon became the major European gathering for experts in those fields. In 2005 the ICANN conference was organized by the Systems Research Institute, Polish Academy of Sciences, Warsaw, Poland, and the Nicolaus Copernicus University, Toru, Poland. From over 600 papers submitted to the regular sessions and some 10 special conference sessions, the International Program Committee selected – after a thorough peer-review process – about 270 papers for publication. The large number of papers accepted is certainly a proof of the vitality and attractiveness of the field of artificial neural networks, but it also shows a strong interest in the ICANN conferences.

Merchants and Trade Networks in the Atlantic and the Mediterranean, 1550-1800 Manuel Herrero Sánchez, Klemens Kaps, 2016-09-01 This collective volume explores the ways merchants managed to connect different spaces all over the globe in the early modern period by organizing the movement of goods, capital, information and cultural objects between different commercial maritime systems in the Mediterranean and Atlantic basin. Merchants and Trade Networks in the Atlantic and the Mediterranean, 1550-1800 consists of four thematic blocs: theoretical considerations, the social composition of networks, connected spaces, networks between formal and informal exchange, as well as possible failures of ties. This edited volume features eleven contributions who deal with theoretical concepts such as social network analysis, globalization, social capital and trust. In addition, several chapters analyze the coexistence of mono-cultural and transnational networks, deal with network failure and shifting network geographies, and assess the impact of kinship for building up international networks between the Mediterranean and the Atlantic. This work evaluates the use of specific network types for building up connections across the Mediterranean and the Atlantic Basin stretching out to Central Europe, the Northern Sea and the Pacific. This book is of interest to those who study history of economics and maritime economics, as well as historians and scholars from other disciplines working on maritime shipping, port studies, migration, foreign mercantile communities, trade policies and mercantilism.

Chapter 2 covers various optimization problems that arise in the context of connection-oriented networks. Chapter 3 focuses on modeling and optimization of Elastic Optical Networks. Chapter 4 is devoted to overlay networks. The book concludes with Chapter 5, summarizing the book and present recent research trends in the field of network optimization.

First International Conference on Optical Communications and Networks (ICOCN 2002) Cambyse Guy Omidyar, H. Ghafouri-Shiraz, W. D. Zhong, 2002 Optical communications networks are becoming increasingly important as there is demand for high capacity links. Dense wavelength division multiplexing (DWDM) is widely deployed at the core networks to accommodate high capacity transport systems. Optical components such as optical amplifiers, tunable filters, transceivers, termination devices and add-drop multiplexers are becoming more reliable and affordable. Access and metropolitan area networks are increasingly built with optical technologies to overcome the electronic bottleneck at network edges. New components and subsystems for very high speed optical networks offer new design options. The proceedings of the First International Conference on Optical Communications and Networks present high quality recent research results in the areas of optical communications, network components, architectures, protocols, planning, design, management and operation.

International Cooperation, Competition Authorities and Transnational Networks Mateusz Blachucki,2023-11-30 This book presents a comprehensive study of the emergence, functioning and evolution of international cooperation among competition authorities. It presents an in-depth look at network cooperation taking place within international organisations, as well as networks based on binding international agreements and various informal networks, among others. It further identifies and analyses the forms of international cooperation among national competition authorities (NCAs) that are taking place within transnational competition networks. The book classifies these forms of cooperation by grouping them into three stages – soft, developed and enhanced cooperation – discussing each in detail. It thus reflects the evolution of the international cooperation process and provides insights as to its possible development. This work will be of interest to researchers, academics and advanced students in the fields of competition law, public administration, international relations and those interested in international competition law and its contribution to global public governance.

Modeling, Methodologies and Tools for Molecular and Nano-scale Communications Junichi Suzuki,Tadashi Nakano,Michael John Moore,2017-03-15 This book reports on cutting-edge modeling techniques, methodologies and tools used to understand, design and engineer nanoscale communication systems, such as molecular communication systems. Moreover, it includes introductory materials for those who are new to the field. The book's interdisciplinary approach, which merges perspectives in computer science, the biological sciences and nanotechnology, will appeal to graduate students and researchers in these three areas. The book is organized into five parts, the first of which describes the fundamentals of molecular communication, including basic concepts, models and designs. In turn, the second part examines specific types of molecular communication found in biological systems, such as neuronal communication in the brain. The book continues by exploring further types of nanoscale communication, such as fluorescence resonance energy transfer and electromagnetic-based nanoscale communication, in the third part, and by describing nanomaterials and structures for practical applications in the fourth. Lastly, the book presents nanomedical applications such as targeted drug delivery and biomolecular sensing.

Mind as Machine Margaret A. Boden,2006 Cognitive science is among the most fascinating intellectual achievements of the modern era. The quest to understand the mind is an ancient one. But modern science has offered new insights and techniques that have revolutionized this enquiry. Oxford University Press now presents a masterly history of the field, told by one of its most eminent practitioners. Psychology is the thematic heart of cognitive science, which aims to understand human (and animal) minds. But its core theoretical ideas are drawn from cybernetics and artificial intelligence, and many cognitive scientists try to build functioning models of how the mind works. In that sense, Margaret Boden suggests, its key insight is that mind is a (very special) machine. Because the mind has many different aspects, the field is highly interdisciplinary. It integrates psychology not only with cybernetics/AI, but also with neuroscience and clinical neurology; with the philosophy of mind, language, and logic; with linguistic work on grammar, semantics, and communication; with anthropological studies of cultures; and with biological (and A-Life) research on animal behaviour, evolution, and life itself. Each of these disciplines, in its own way, asks what the mind is, what it does, how it works, how it develops--and how it is even possible. Boden traces the key questions back to Descartes's revolutionary writings, and to the ideas of his followers--and his radical critics--through the eighteenth and nineteenth centuries. Her story shows how controversies in the development of experimental physiology, neurophysiology, psychology, evolutionary biology, embryology, and logic are still relevant today. Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century. Cognitive science covers all mental phenomena: not just 'cognition' (knowledge), but also emotion, personality, psychopathology, social communication, religion, motor action, and consciousness. In each area, Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided. And she sketches the waves of resistance and acceptance on the part of the media and general public, showing how these have affected the development of the field. No one else could tell this story as Boden can: she has been a member of the cognitive science community since the late-1950s, and has known many of its key figures personally. Her narrative is written in a lively, swift-moving style, enriched by the personal touch of someone who knows the story at first hand. Her history looks forward as well as back: besides asking how state-of-the-art research compares with the hopes of the early pioneers, she identifies the most promising current work. Mind as Machine will be a rich resource for anyone working on the mind, in any academic discipline, who wants to know how our understanding of mental capacities has advanced over the years.
