Re-imagining Communication in Africa and the Caribbean Hopeton S. Dunn, Dumisani Moyo, William O.

Lesitaokana, Shanade Bianca Barnabas, 2021-01-30 This book advances alternative approaches to understanding media, culture and technology in two vibrant regions of the Global South. Bringing together scholars from Africa and the Caribbean, it traverses the domains of communication theory, digital technology strategy, media practice reforms, and corporate and cultural renewal. The first section tackles research and technology with new conceptual thinking from the South. The book then looks at emerging approaches to community digital networks, online diaspora entertainment, and video gaming strategies. The volume then explores reforms in policy and professional practice, including in broadcast television, online newspapers, media philanthropy, and business news reporting. Its final section examines the role of village-based folk media, the power of popular music in political opposition, and new approaches to overcoming neo-colonial propaganda and external corporate hegemony. This book therefore engages critically with the central issues of how we communicate, produce, entertain, and build communities in 21st-century Africa and the Caribbean.

Game Over Derek Hart, 2018-06-02 Something went terribly wrong. Seemingly normal people suddenly were so aggressive, even violent. They took to the streets, protesting everything, which led to massive riots. Law enforcement was hard pressed to contain this inexplicable breakdown in society.

Home Studio Clinic Emile Menasche, 2007-01-01 (Technical Reference). Open a music gear catalog and it's bursting with an incredible array of tools available for home recording: recorders, software, interfaces, microphones, and more. And while that's exciting, the sheer volume of choices can be a distraction to the real goal of home recording: getting some music down. *Home Studio Clinic*, written from a musician's point of view, is designed to

help you build and use a studio based on your musical goals, not necessarily on the assumption that you want to become a master engineer. By exploring concepts and various common tasks, this reader-friendly book gives you the know-how to choose equipment that suits your needs and style, and the techniques to use it effectively. The goal, Menasche says, is to spend studio time creating, not reading owner's manuals.

Imaging and Assessing Mobile Technology for Development Richard Musabe, John Sören Pettersson, 2024-04-08 Imaging and assessing mobile technology for development (M4D) means understanding the use of appropriate technologies and services, and how they directly or indirectly address socio-economic challenges. This book adopts various perspectives to identify the obstacles to affordable digital technologies in order to enable, enhance, and effect development. The book plays on the tension between success reports and optimistic projections, on one hand, and empirical evidence of technological belly splash, on the other hand. The areas covered include infusion of service education in computing education, the Rwandan establishment of African Centres of Excellence to promote the development of appropriate technology, the metaverse's realisation in a mobile network-enabled "metaversity", and difficulties detected when evaluating digitisation of distance learning, students' security awareness, dissemination of agricultural information, and mobile payment. The decolonisation of community-based media and attempts to step outside the mobile network and Internet are also covered.

UML-Based Software Product Line Engineering with SMarty Edson Oliveira Jr, 2023-03-10 This book is about software product lines (SPLs) designed and developed taking UML diagrams as the primary basis, modeled according to a rigorous approach composed of an UML profile and a systematic process for variability management activities, forming the Stereotype-based Management of Variability (SMarty) approach. The book consists of five parts. Part I provides essential concepts on SPL in terms of the first development methodologies. It also introduces variability concepts and discusses SPL architectures finishing with the SMarty approach. Part II is focused on the design, verification and validation of SMarty SPLs, and Part III concentrates on the SPL architecture evolution based on ISO/IEC metrics, the SYSTEM-PLA method, optimization with the MOA4PLA method, and feature interaction prevention. Next, Part IV presents SMarty as a basis for SPL development, such as, the M-SPLearning SPL for mobile learning applications, the PLeTs SPL for testing tools, the PlugSPL plugin environment for supporting the SPL life cycle, the SyMPLES approach for designing embedded systems with SysML, the SMartySPEM approach for software process lines (SPrL), and re-engineering of class diagrams into an SPL. Eventually, Part V promotes controlled experimentation in UML-based SPLs, presenting essential concepts on how to plan, conduct, and document experiments, as well as showing several experiments carried out with SMarty. This book aims at lecturers, graduate students and

experienced practitioners. Lecturers might use the book for graduate level courses about SPL fundamentals and tools; students will learn about the SPL engineering process, variability management, and mass customization; and practitioners will see how to plan the transition from single-product development to an SPL-based process, how to document inherent variability in a given domain, or how to apply controlled experiments to SPLs.
