Fundamentals And Application Of Heat And Mass Transfer Dr. Vimal Sagar, Dr. Ravindra Kumar Agarwal, Dr. P. Ragupathi, Dr. Manjula S. Harageri, 2022-09-26 The purpose of this book is to provide an introduction to the several rate equations and techniques for determining the rate of heat transfer across system boundaries in a variety of settings. We hope that self-study students and working engineers alike will find it useful as a resource. Learning involves asking and answering one's own questions, whether one is studying alone or in a group setting. We're hoping this book can help make it happen. Using clear and accessible language, Heat and Mass Transfer covers a wide range of subjects fundamental to the fields of energy studies and mass transfer. Research, examples, and other exercises are used extensively throughout the text to illustrate key concepts

Introduction to Computer Graphics Rohit Srivastava & Dharendra Kumar Sharma, : This book mainly for under graduate students who have interest in computer graphics. Here, we have aligned the fundamental knowledge of computer graphics and practical approach. Entire book shows clarity of basic concepts and principles and its implementation using programming language. Open source tool as OpenGL, with C programming used. This book reviews computer calculations and programming strategies for indicating and producing movement for graphical articles, or at least, Computer graphics. It is basically about two and three-dimensional (3D) Computer graphics. The primary audience is advanced undergraduate or beginning graduate students in Computer Science. Computer graphics developers who need to gain proficiency with the rudiments of computer animation programming and specialists who use programming bundles to produce computer animation (digital illustrators) who need to more readily comprehend the fundamental computational issues of animation programming will likewise profit from this book. This book presents a large number of the significant ideas of Computer graphics to under graduate students and beginners. A few of these ideas are not new: They have previously showed up in generally accessible academic distributions, specialized reports, course books, and lay-press articles. The advantage of writing a textbook sometime after the appearance of an idea is that its long-term impact can be understood better and placed in a larger context. Our aim has been to treat ideas with as much sophistication as possible (which includes omitting ideas that are no longer as important as they once were), while still introducing beginning students to the subject lucidly and gracefully.

Advanced Machining Process Dr. Sandeep Sharma, Dr. Mahesh Mallampati, Dr. G. M. Balamurugan, M. Karthikeyan, 2022-09-12 This book discusses the many different advanced manufacturing methods that are used by various manufacturing businesses to increase their output in terms of contributing to the socioeconomic growth of the world. Machining processes, both traditional and nonconventional, as well as virtual manufacturing principles and procedures, may all be carried out using automation. It is discussed in detail how material may be removed by the use of mechanical, chemical, thermal, and electrochemical methods. In particular, a large number of topics reflect recent advancements, such as contemporary tool steel, computational machining, computational modelling of various process phenomena, processor control, monitoring of a cutting state, progressive as well as hybrid machine tool operations, and generation as well as modelling of surface integrity. This book discusses the current status of machining technology as well as their potential for future advancement. In it, a thorough exposition of metal working theory, experimental and simulation approaches, fundamental machining processes, and their efficient use in a broad variety of industrial applications are provided. iv Fundamental physical processes and techniques for evaluating them, supporting systems of machining operations for certain classes of materials, and surface integrity are some of the topics that will be discussed in this book. In addition to that, the book offers methods for the optimization

of procedures as well as the evaluation of machinability. In addition to this, it discusses issues that are not presently covered in those other sources, including such high performance or multitasking (full) machining, both of which have a strong potential for enhancing productivity, as well as virtual and electronic machining.

Recent Advancements in System Modelling Applications R Malathi,J Krishnan,2013-03-12 The book is a collection of peer-reviewed scientific papers submitted by active researchers in the 36th National System Conference (NSC 2012). NSC is an annual event of the Systems Society of India (SSI), primarily oriented to strengthen the systems movement and its applications for the welfare of humanity. A galaxy of academicians, professionals, scientists, statesman and researchers from different parts of the country and abroad are invited to attend the Conference. The book presents various research articles in the area of system modelling in all disciplines of engineering sciences as well as socio-economic systems. The book can be used as a tool for further research.

Essentials of Techno-Pedagogy Dr. A. Muthumanickam,Dr. B. Kannan, Educational technology is an indispensable element of teaching. Teacher educators need knowledge and skills to design and successfully implement technology-enhanced learning. In today's world, most people must continuously improve their abilities and information levels to encounter the challenges of lifestyle. The current era of the 21st century is the data and innovation (IT) time. Each viewpoint of life has got to be synonymous with science and advancement. All over the world, information in all ranges is making tremendous advances. Information and innovation are right now being utilized within the field of education to create effective and interesting instruction and preparation for both understudies and teachers. The term “technology” within the 21st century is a critical issue in many fields, including instruction. This is since innovation has become the interstate information development in numerous countries. Nowadays, the application of technology has experienced progress and has changed our social designs that totally alter the way people think, work, and live. As a component of this, schools and other instructive teaching approaches ought to plan understudies to live in an “information society” to consider ICT support in their instructive programs. “Technology could be a crucial portion of teaching today’s students and it is utilized at whatever point conceivable within the classroom so that it moves forward the large learning environment.” Students will also get acquainted with innovation since they will utilize it in the future. A great educator not only provides proper ways for students to plan successfully but also motivates them to utilize their abilities in developing their country. This is often the crossover strategy of instructing in which ICT is being utilized for instructing learning circumstances. The combination of both the words “techno” and “pedagogy” implies weaving the innovations into the instructing learning preparation. It needs to consciously recognize the intervening learning environment in order to simplify and clarify the data transmission process to the greatest extent. Hence the thought of the Publication of the Edited book entitled “Essentials of Techno-pedagogy” to make available the rudiments concerning Techno-Pedagogy. This collection includes innovative research and enticing ideas which would tickle the palate of the specialist, the teacher and the curious reader.
