Analyzing Computer System Performance with Perl::PDQ Neil J. Gunther,2009-03-22 Makes performance analysis and queueing theory concepts simple to understand and available to anyone with a background in high school algebra Presents the practical application of these concepts in the context of modern, distributed, computer system designs Packed with helpful examples that are based on the author's experience analyzing the performance of large-scale systems over the past 20 years.

**Privacy and Security in Computer Systems** Rein Turn,Willis H. Ware,1975 This paper presents a broad overview of the three topics important in the design, operation, and use of computerized information systems and personal information databanks: safeguarding of individual rights of data subjects; providing confidentiality to identifiable personal information in statistical and research-oriented information systems; and, protecting computer resources and data files against unauthorized use by maliciously-inclined insiders or by intruders from outside.

**German Medical Data Sciences: A Learning Healthcare System** U. Hübner,U. Sax,H.-U. Prokosch,2018-09-06 Advances in digital and information technology have meant that medical informatics and its associated fields are of ever-increasing importance in the modern healthcare environment. This book presents selected papers from the 63rd annual conference of the German Society of Medical Information Sciences, Biometry, and Epidemiology, GMDS 2018, held in Osnabrück, Germany, in September 2018. The society encompasses not only medical informatics, biometry and epidemiology, but also medical bioinformatics, systems biology and health data management. The title of this year's conference is "The Learning Health System: Research Based, Innovative, Connecting", and 38 full papers of the 164 oral presentations and 65 posters delivered at the conference are included here. A wide variety of scientific topics are covered, including standards to enable the interoperable interchange of information; metadata management; record linkage; IT issues for health care networks; interprofessional teaching and training; eHealth legislation; analysis of miRNAs and RNA-Seq data, among others. The contributors are all specialists in their field, and this book disseminates some of the innovative ideas which are

urgently needed to meet the challenges facing a constantly developing digital healthcare environment.

**Advances in Computer Systems Architecture** Thambipillai Srikanthan, Jingling Xue, Chip-Hong Chang, 2005-10-19 On behalf of the Program Committee, we are pleased to present the proceedings of the 2005 Asia-Pacific Computer Systems Architecture Conference (ACSAC 2005) held in the beautiful and dynamic country of Singapore. This conference was the tenth in its series, one of the leading forums for sharing the emerging research findings in this field. In consultation with the ACSAC Steering Committee, we selected a 10-member Program Committee. This Program Committee represented a broad spectrum of research expertise to ensure a good balance of research areas, institutions and experience while maintaining the high quality of this conference series. This year's committee was of the same size as last year but had 19 new faces. We received a total of 173 submissions which is 14% more than last year. Each paper was assigned to at least three and in some cases four Program Committee members for review. Wherever necessary, the committee members called upon the expertise of their colleagues to ensure the highest possible quality in the reviewing process. As a result, we received 415 reviews from the Program Committee members and their 105 co-reviewers whose names are acknowledged in the proceedings. The conference committee adopted a systematic blind review process to provide a fair assessment of all submissions. In the end, we accepted 65 papers on a broad range of topics giving an acceptance rate of 37.5%. We are grateful to all the Program Committee members and the co-reviewers for their efforts in completing the reviews within a tight schedule.

**Interfaces on Trial 2.0** Jonathan Band, Masanobu Katoh, 2011-03-04 The debate over the use of copyright law to prevent competition and interoperability in the global software industry. We live in an interoperable world. Computer hardware and software products from different manufacturers can exchange data within local networks and around the world using the Internet. The competition enabled by this compatibility between devices has led to fast-paced innovation and prices low enough to allow ordinary users to command extraordinary computing capacity. In *Interfaces on Trial 2.0*, Jonathan Band and Masanobu Katoh investigate an often overlooked factor in the development of today's interoperability: the evolution of copyright law. Because software is copyrightable, copyright law determines the rules for competition in the information technology industry. This book—a follow-up to Band and Katoh's successful 1995 book *Interfaces on Trial*—examines the debates surrounding the use of copyright law to prevent competition and interoperability in the global software industry in the last fifteen years. Band and Katoh are longtime advocates for interoperable devices but present a reasoned view of contentious issues related to interoperability issues in the United States, the European Union, and the Pacific Rim. They discuss such topics as the protectability of interface specifications, the permissibility of reverse engineering (and legislative and executive endorsement of pro-interoperability case law), the interoperability exception to the U.S. Digital Millennium Copyright Act and the

interoperability cases decided under it, the enforceability of contractual restrictions on reverse engineering; and recent legal developments affecting the future of interoperability, including those related to open source-software and software patents.
