- 🔍 **Gifted Touch** Melinda Metz, 2023-09-26 From the author of the Roswell High series, an “engaging mystery” about a teen who discovers she has a paranormal gift, and a killer on her trail (School Library Journal). Rae can’t tell anyone about the voices she hears in her head. If she does, they’ll lock her up in the hospital again, only this time, they’ll throw away the key. She wouldn’t blame them either. Rae does feel like she’s losing her mind. This is how her insane mother must have felt right before she died. All this makes life at Rae’s private high school lonelier than ever. Anthony might be the only friend she has right now, if she can even call the empathetic stranger in her group therapy session a friend. But when someone sets off a bomb in a bathroom with Rae as the intended target, Anthony is the only person Rae can turn to. Only problem? Anthony is the number one suspect . . . “[A] fast pace and original premise.” —Publishers Weekly

An essential learning tool for classes in fingerprinting and impression evidence—with each chapter building on the previous one using a pedagogical format—the book is divided into three sections. The first explains the history and theory of fingerprint analysis, fingerprint patterns and classification, and the concept of biometrics—the practice of using unique biological measurements or features to identify individuals. The second section discusses forensic light sources and physical and chemical processing methods. Section three covers fingerprint analysis with chapters on documentation, crime scene processing, fingerprint and palm print comparisons, and courtroom testimony. New coverage to this edition includes such topics as the biometrics and AFIS systems, physiology and embryology of fingerprint development in the womb, digital fingerprint record systems, new and emerging chemical reagents, varieties of fingerprint powders, and more. - 🔍 **Automated Fingerprint Identification** J. H. Wegstein, 1970 A procedure is described for determining whether two fingerprint impressions were made by the same finger. The procedure uses the x and y coordinates and the individual directions of the minutiae (ridge endings and bifurcations). The identity of two impressions is established by computing the density of clusters of points involving the differences in coordinates that are found in going from one of the fingerprint impression to the other. Experimental results using machine-read minutiae data are given along with results from a previously reported procedure that utilized constellations of minutiae in its matching process. (Author).
